XC40 Recharge Plug-in Hybrid 2022 (21w46) User Manual

Version 2025-05-28

Disclaimer

Due to the dynamic nature of our software-based product, the content of this PDF represents the most up-to-date version of the user manual as of the time of printing. As we continuously update and improve our product, certain content may not reflect the most up-to-date information in a future instance. Therefore, we strongly recommend utilizing the digital user manual app in your car's center display for the most accurate and up-to-date information. You can also access information in the Volvo Cars mobile app.

Please note that if you choose to print the manual, we cannot guarantee the validity of the information in future instances, as updates may have occurred since the time of printing. To ensure the highest level of safety and optimal product usage, we strongly advise relying on the digital user manual, which can be easily accessed through your car's center display. This printable version is generic and does not correspond to your car. If there are discrepancies between this printable manual and the manual you see in your car's center display, the latter takes precedence.

Contents

1. Owner's information

- 1.1 Owner's information
- 1.2 The Owner's Manual and the environment
- 1.3 Using the Owner's Manual
- 1.4 Owner's Manual in the center display
- 1.5 Navigate in the Owner's Manual in the center display

2. Your Volvo

- 2.1 Volvo's innovation areas
 - 2.1.1 Eco-efficiency
 - 2.1.2 Sensus connection and entertainment
- 2.2 Volvo ID
 - 2.2.1 Volvo ID
 - 2.2.2 Creating a Volvo ID
 - 2.2.3 Problems logging in with Volvo ID
- 2.3 Type approval and licenses
 - 2.3.1 License agreement for instrument panel
 - 2.3.2 Type approval for HomeLink®
 - 2.3.3 License agreement for audio and media
 - 2.3.4 Type approval Radio Equipment Directive
 - 2.3.5 Certificate for wireless charger
 - 2.3.6 Start and lock system type designations
 - 2.3.7 Customer Privacy Policy
 - 2.3.8 Terms and Conditions for Services
 - 2.3.9 Navigation license agreements
 - 2.3.10 Spotify license agreement
- 2.4 Displays and controls by the driver in a left-hand drive vehicle
- 2.5 Technician certification
- 2.6 Connecting equipment to the vehicle's data link connector
- 2.7 Driver distraction
- 2.8 Change of market when importing or relocating
- 2.9 Viewing the Vehicle Identification Number (VIN)

- 2.10 Data recording
- 2.11 Accessory installation
- 2.12 Volvo Structural Parts Statement
- 2.13 Contacting Volvo
- 2.14 Software Updates
- 2.15 Important information on accessories and extra equipment
- 3. Safety
 - 3.1 Seat belts
 - 3.1.1 Seat belts
 - 3.1.2 Buckling and unbuckling seat belts
 - 3.1.3 Seat belt tensioners
 - 3.1.4 Resetting the electric seat belt tensioners
 - 3.1.5 Door and seat belt reminders
 - 3.2 Airbags
 - 3.2.1 Airbags
 - 3.2.2 Driver/passenger side front airbags
 - 3.2.3 Occupant Classification System
 - 3.2.4 Inflatable curtain
 - 3.2.5 Side airbags
 - 3.3 Child safety
 - 3.3.1 Attachment points for child seats
 - 3.3.1.1 Lower child seat attachment points
 - 3.3.1.2 ISOFIX/LATCH lower anchors
 - 3.3.1.3 Top tether anchors
 - 3.3.2 Activating and deactivating child locks
 - 3.3.3 Child safety
 - 3.3.4 Child restraints
 - 3.3.5 Infant seats
 - 3.3.6 Booster cushions
 - 3.3.7 Convertible seats
 - 3.3.8 Occupant Classification System
 - 3.4 Safety mode
 - 3.4.1 Safety mode
 - 3.4.2 Starting and moving the vehicle when it is in safety mode
 - 3.5 Safety
 - 3.6 Recall information
 - 3.7 Occupant safety
 - 3.8 Safety during pregnancy
 - 3.9 Reporting safety defects
 - 3.10 Whiplash Protection System

4. Displays and voice control

- 4.1 Instrument panel
 - 4.1.1 Gauges and indicators in the instrument panel
 - 4.1.1.1 Fuel gauge
 - 4.1.1.2 Hybrid battery gauge
 - 4.1.1.3 Hybrid gauge
 - 4.1.1.4 Ambient temperature sensor
 - 4.1.2 Trip computer
 - 4.1.2.1 Trip computer
 - 4.1.2.2 Displaying trip data in the instrument panel
 - 4.1.2.3 Resetting the trip odometer
 - 4.1.2.4 Displaying trip statistics in the center display

- 4.1.2.5 Trip statistics settings
- 4.1.3 Instrument panel
- 4.1.4 Instrument panel settings
- 4.1.5 License agreement for instrument panel
- 4.1.6 App menu in instrument panel
- 4.1.7 Handling the App menu in the instrument panel
- 4.1.8 Indicator and warning symbols
- 4.1.9 Messages in the instrument panel
- 4.1.10 Date and time

4.2 Center display

4.2.1 Settings

- 4.2.1.1 Resetting user data when the vehicle changes owners
- 4.2.1.2 Changing settings in the center display's Top view
- 4.2.1.3 Resetting center display settings
- 4.2.1.4 Opening contextual setting in the center display
- 4.2.1.5 Changing system units of measurement
- 4.2.1.6 Turning off and adjusting the volume of the center display system sounds
- 4.2.1.7 Changing system language
- 4.2.1.8 Changing the appearance of the center display
- 4.2.1.9 Displaying trip data in the instrument panel
- 4.2.1.10 Trip statistics settings
- 4.2.1.11 Instrument panel settings
- 4.2.1.12 Date and time
- 4.2.1.13 Terms of use and data sharing
- 4.2.1.14 Activating and deactivating data sharing
- 4.2.1.15 Unlock settings
- 4.2.1.16 Care Key settings
- 4.2.1.17 Lock confirmation settings
- 4.2.1.18 Keyless unlock settings
- 4.2.1.19 Settings for automatically activating the parking brake
- 4.2.2 Driver profiles

4.2.2.1 Driver profiles

- 4.2.2.2 Changing a driver profile's name
- 4.2.2.3 Connect key to driver profile
- 4.2.2.4 Protecting a driver profile
- 4.2.2.5 Selecting a driver profile
- 4.2.2.6 Resetting driver profile settings
- 4.2.3 Center display overview
- 4.2.4 Activating and deactivating the center display
- 4.2.5 Handling the center display
- 4.2.6 Navigating in the center display's views
- 4.2.7 Handling tiles in the center display
- 4.2.8 Symbols in the center display status bar
- 4.2.9 Function view in the center display
- 4.2.10 Moving apps and buttons in the center display
- 4.2.11 Messages in the center display
- 4.2.12 Keyboard in the center display
- 4.2.13 Entering characters, letters and words by hand in the center display
- 4.2.14 Changing keyboard language in the center display
- 4.2.15 Displaying trip statistics in the center display
- 4.2.16 Owner's Manual in the center display
- 4.2.17 Navigate in the Owner's Manual in the center display

4.3 Symbols and messages

- 4.3.1 Handling messages
 - 4.3.1.1 Messages in the center display
 - 4.3.1.2 Handling messages in the center display
 - 4.3.1.3 Handling messages saved from the center display
 - 4.3.1.4 Messages in the instrument panel
 - 4.3.1.5 Handling messages in the instrument panel
 - 4.3.1.6 Handling messages saved from the instrument panel
- 4.3.2 BLIS messages
- 4.3.3 City Safety messages
- 4.3.4 Cross Traffic Alert messages
- 4.3.5 Electronic Stability Control symbols and messages
- 4.3.6 Symbols and messages for Adaptive Cruise Control
- 4.3.7 Pilot Assist symbols and messages
- 4.3.8 Lane Keeping Aid symbols and messages
- 4.3.9 Lane Keeping Aid display
- 4.3.10 Park Assist Pilot messages
- 4.3.11 Park Assist symbols and messages
- 4.3.12 Park Assist Camera symbols and messages
- 4.3.13 Symbols and messages for steering assistance during collision risks
- 4.3.14 Symbols in the center display status bar
- 4.3.15 Indicator and warning symbols
- 4.3.16 Parking climate symbols and messages
- 4.3.17 Hybrid symbols and messages in the instrument panel
- 4.3.18 Overheating of engine and transmission
- 4.3.19 Automatic transmission symbols and messages
- 4.4 Voice control
 - 4.4.1 Climate control system voice commands
 - 4.4.2 Voice control for radio and media
 - 4.4.3 Voice control
 - 4.4.4 Using voice control
 - 4.4.5 Updating voice control
 - 4.4.6 Tips for improving voice control
 - 4.4.7 Voice control settings
 - 4.4.8 Voice control command list for the navigation system
 - 4.4.9 Voice control for cellular phones
 - 4.4.10 Text message voice control
 - 4.4.11 Voice control for navigation system
- 4.5 Displays and controls by the driver in a left-hand drive vehicle

5. Lighting

- 5.1 Exterior lighting
 - 5.1.1 Active Bending Lights
 - 5.1.2 Active high beam
 - 5.1.3 Using turn signals
 - 5.1.4 Brake lights
 - 5.1.5 Rear fog light
 - 5.1.6 Front fog lights/corner illumination
 - 5.1.7 Low beams
 - 5.1.8 Using high beam
 - 5.1.9 Using home safe lighting
 - 5.1.10 Emergency brake lights
 - 5.1.11 Parking lights

- 5.1.12 Welcome Light
- 5.1.13 Hazard warning flashers
- 5.1.14 Daytime running lights
- 5.1.15 Location of exterior lights
- 5.1.16 Bulb specifications
- 5.1.17 Checking trailer lights
- 5.2 Interior lighting
 - 5.2.1 Interior Lighting
 - 5.2.2 Adjusting interior lighting
- 5.3 Adjusting light functions via the center display
- 5.4 Lighting control and panel
- 6. Windows, glass and mirrors
 - 6.1 Rearview and door mirrors
 - 6.1.1 HomeLink®
 - 6.1.2 Rearview/door mirrors
 - 6.1.3 Adjusting the door mirrors
 - 6.1.4 Adjusting the rearview mirror dimming function
 - 6.1.5 Using stored positions for seats and mirrors
 - 6.1.6 Storing positions for seats and mirrors
 - 6.1.7 Activating and deactivating the heated rear window and door mirrors
 - 6.1.8 Automatically activating and deactivating the heated rear window and door mirrors
 - 6.2 Windshield and rear window
 - 6.2.1 Damaged windshield
 - 6.2.2 Wiper blades and washer fluid
 - 6.2.3 Using automatic rear window wiping when backing up
 - 6.2.4 Using the rear window wiper/washer
 - $6.2.5 \ \ \text{Using the rain sensor}$
 - 6.2.6 Activating and deactivating the rain sensor's memory function
 - 6.2.7 Using the windshield and headlight washers
 - 6.2.8 Using the windshield wipers
 - 6.2.9 Activating and deactivating the heated rear window and door mirrors
 - 6.2.10 Automatically activating and deactivating the heated rear window and door mirrors
 - 6.3 Door windows and panoramic roof
 - 6.3.1 Power windows
 - 6.3.2 Operating the power windows
 - 6.3.3 Panoramic roof
 - 6.3.4 Operating the panoramic roof
 - 6.3.5 Auto closing the panoramic roof sun curtain
 - 6.4 Windows, glass and mirrors
 - 6.5 Pinch protection for windows and sun curtains
 - 6.6 Reset procedure for pinch protection
 - 6.7 Activating and deactivating max defroster

7. Seats and steering wheel

- 7.1 Front seat
 - 7.1.1 Climate controls for front seat
 - 7.1.1.1 Activating and deactivating power front seats
 - 7.1.1.2 Activating and deactivating the heated front seat
 - 7.1.1.3 Setting the blower speed for the front seats
 - 7.1.1.4 Setting the temperature for the front seats
 - 7.1.1.5 Synchronize temperature
 - 7.1.2 Memory function for front seat
 - 7.1.2.1 Using stored positions for seats and mirrors

- 7.1.2.2 Storing positions for seats and mirrors
- 7.1.3 Front seats
- 7.1.4 Power front seats
- 7.1.5 Adjusting the power front seats
- 7.1.6 Manual front seats
- 7.1.7 Adjusting front seat cushion length
- 7.1.8 Adjusting front seat lumbar support
- 7.2 Rear seat
 - 7.2.1 Climate controls for rear seat
 - 7.2.1.1 Activating and deactivating the heated rear seats
 - 7.2.2 Rear seat
 - 7.2.3 Adjusting the rear seat head restraints
 - 7.2.4 Folding down the rear seat backrests
 - 7.2.5 Rear seat ski hatch
- 7.3 Steering wheel
 - 7.3.1 Speed-dependent steering wheel resistance
 - 7.3.2 Steering wheel controls and horn
 - 7.3.3 Adjusting the steering wheel
 - 7.3.4 Activating and deactivating the heated steering wheel
 - 7.3.5 Activating and deactivating automatic steering wheel heating
- 8. Climate control
 - 8.1 Climate controls
 - 8.1.1 Climate controls for passenger compartment
 - 8.1.1.1 Activating auto climate control
 - 8.1.1.2 Setting the blower speed for the front seats
 - 8.1.1.3 Activating and deactivating air conditioning
 - 8.1.1.4 Activating and deactivating recirculation
 - 8.1.1.5 Activating and deactivating the recirculation timer setting
 - 8.1.1.6 Setting the temperature for the front seats
 - 8.1.1.7 Synchronize temperature
 - 8.1.1.8 Adjusting air distribution
 - 8.1.2 Climate controls for seats and steering wheel
 - 8.1.2.1 Activating and deactivating the heated steering wheel
 - 8.1.2.2 Activating and deactivating automatic steering wheel heating
 - 8.1.2.3 Activating and deactivating the heated rear seats
 - 8.1.2.4 Activating and deactivating power front seats
 - 8.1.2.5 Activating and deactivating the heated front seat
 - 8.1.3 Climate controls for windows and mirrors
 - 8.1.3.1 Activating and deactivating the heated rear window and door mirrors
 - 8.1.3.2 Automatically activating and deactivating the heated rear window and door mirrors
 - 8.1.3.3 Activating and deactivating max defroster
 - 8.1.4 Climate system controls
 - 8.2 Air distribution
 - 8.2.1 Activating and deactivating recirculation
 - 8.2.2 Activating and deactivating the recirculation timer setting
 - 8.2.3 Activating and deactivating max defroster
 - 8.2.4 Air distribution
 - 8.2.5 Adjusting air distribution
 - 8.2.6 Air distribution options
 - 8.2.7 Opening, closing and directing air vents
 - 8.3 Parking climate
 - 8.3.1 Preconditioning

- 8.3.1.1 Preconditioning
- 8.3.1.2 Starting and stopping preconditioning
- 8.3.1.3 Preconditioning timer
- 8.3.1.4 Activating and deactivating preconditioning timer
- 8.3.1.5 Deleting preconditioning timer settings
- 8.3.1.6 Adding and editing timer settings for preconditioning
- 8.3.2 Parking climate comfort
 - 8.3.2.1 Climate comfort retaining function
 - 8.3.2.2 Starting and switching off the climate retaining function when parking
- 8.3.3 Parking climate
- 8.3.4 Parking climate symbols and messages
- 8.3.5 Parking heater
- 8.4 Heater
 - 8.4.1 Heater
 - 8.4.2 Parking heater
 - 8.4.3 Additional heater
 - 8.4.4 Activating and deactivating the auxiliary heater
- 8.5 Climate
- 8.6 Climate control system voice commands
- 8.7 Climate control system service
- 8.8 Climate control sensors
- 8.9 Climate zones
- 8.10 Perceived temperature

9. Key, locks and alarm

- 9.1 Remote key
 - 9.1.1 Driver profiles
 - 9.1.1.1 Driver profiles
 - 9.1.1.2 Changing a driver profile's name
 - 9.1.1.3 Connect key to driver profile
 - 9.1.1.4 Protecting a driver profile
 - 9.1.1.5 Selecting a driver profile
 - 9.1.1.6 Resetting driver profile settings
 - 9.1.2 Connect key to driver profile
 - 9.1.3 Electronic immobilizer
 - 9.1.4 Keys
 - 9.1.5 Ordering additional keys
 - 9.1.6 Replacing the key's battery
 - 9.1.7 Locking and unlocking using the key buttons
 - 9.1.8 Care Key restricted key
 - 9.1.9 Care Key settings
 - 9.1.10 Unlocking the tailgate using the key button
 - 9.1.11 Detachable key blade
 - 9.1.12 Locking and unlocking with detachable key blade
 - 9.1.13 Key range
 - 9.1.14 Start and lock system type designations
 - 9.1.15 Antenna locations for the start and lock system
 - 9.1.16 Ignition modes
 - 9.1.17 Selecting ignition mode
- 9.2 Locking and unlocking
 - 9.2.1 Keyless locking and unlocking
 - 9.2.1.1 Operating the tailgate with a foot movement
 - 9.2.1.2 Antenna locations for the start and lock system

- 9.2.1.3 Keyless locking and unlocking with touch-sensitive surfaces
- 9.2.1.4 Keyless locking and unlocking
- 9.2.1.5 Keyless unlock settings
- 9.2.1.6 Closing and locking the tailgate using the buttons
- 9.2.1.7 Keyless tailgate unlock
- 9.2.2 Keys
- 9.2.3 Locking and unlocking using the key buttons
- 9.2.4 Unlock settings
- 9.2.5 Unlocking the tailgate using the key button
- 9.2.6 Locking and unlocking with detachable key blade
- 9.2.7 Automatic locking when driving
- 9.2.8 Setting maximum opening height for the power tailgate
- 9.2.9 Locking and unlocking from inside the vehicle
- 9.2.10 Unlocking the tailgate from inside the vehicle
- 9.2.11 Private Locking
- 9.2.12 Activating and deactivating private locking
- 9.2.13 Locking and unlocking
- 9.2.14 Activating and deactivating child locks
- 9.2.15 Lock indication
- 9.2.16 Lock confirmation settings
- 9.3 Alarm
 - 9.3.1 Alarm
 - 9.3.2 Arming and disarming the alarm

10. Driver support

- 10.1 Cruise Control functions
 - 10.1.1 Cruise control
 - 10.1.1.1 Cruise control
 - 10.1.1.2 Cruise control standby mode
 - 10.1.1.3 Adjusting set speed for speed-controlling functions
 - 10.1.2 Adaptive Cruise Control
 - 10.1.2.1 Adaptive Cruise Control
 - 10.1.2.2 Symbols and messages for Adaptive Cruise Control
 - 10.1.2.3 Adaptive Cruise Control standby mode
 - 10.1.2.4 Auto-hold braking with speed-controlling functions
 - 10.1.2.5 Adjusting set speed for speed-controlling functions
 - 10.1.2.6 Switching target vehicles with speed-controlling functions
 - 10.1.2.7 Setting time interval to the vehicle ahead
 - 10.1.2.8 Collision risk warning from speed-controlling functions
 - 10.1.3 Pilot Assist
 - 10.1.3.1 Auto-hold braking with speed-controlling functions
 - 10.1.3.2 Adjusting set speed for speed-controlling functions
 - 10.1.3.3 Switching target vehicles with speed-controlling functions
 - 10.1.3.4 Pilot Assist
 - 10.1.3.5 Adaptive Cruise Control and Pilot Assist displays
 - 10.1.3.6 Pilot Assist symbols and messages
 - 10.1.3.7 Pilot Assist standby mode
 - 10.1.3.8 Setting time interval to the vehicle ahead
 - 10.1.3.9 Differences between Pilot Assist and Lane Keeping Aid
 - 10.1.3.10 Collision risk warning from speed-controlling functions
 - 10.1.4 Passing assistance
 - 10.1.4.1 Passing assistance
 - 10.1.4.2 Using passing assistance

- 10.1.5 Cruise control functions
- 10.1.6 Steering wheel buttons for speed-controlling functions
- 10.1.7 Selecting and activating speed-controlling functions
- 10.1.8 Deactivating speed-controlling functions
- 10.2 Distance Alert
 - 10.2.1 Setting time interval to the vehicle ahead
 - 10.2.2 Collision risk warning from speed-controlling functions
- 10.3 Blind Spot Information
 - 10.3.1 BLIS
 - 10.3.2 Activating and deactivating BLIS
 - 10.3.3 BLIS messages
 - 10.3.4 BLIS limitations
- 10.4 Cross Traffic Alert
 - 10.4.1 Cross Traffic Alert
 - 10.4.2 Activating and deactivating Cross Traffic Alert
 - 10.4.3 Cross Traffic Alert messages
 - 10.4.4 Cross Traffic Alert limitations
- 10.5 Rear Collision Warning
 - 10.5.1 Rear Collision Warning
 - 10.5.2 Rear Collision Warning limitations
- 10.6 Connected Safety
 - 10.6.1 Connected Safety
 - 10.6.2 Activating and deactivating Connected Safety
 - 10.6.3 Connected Safety limitations
- 10.7 City Safety
 - 10.7.1 City Safety™
 - 10.7.2 City Safety sub-functions
 - 10.7.3 Setting a warning distance for City Safety
 - 10.7.4 City Safety messages
 - 10.7.5 City Safety limitations
 - 10.7.6 City Safety braking for oncoming vehicles
 - 10.7.7 City Safety in crossing traffic
 - 10.7.8 Limitations of City Safety in crossing traffic
 - 10.7.9 Automatic braking during delayed evasive maneuvers with City Safety
 - 10.7.10 Detecting obstacles with City Safety
- 10.8 Steering assistance during collision risks
 - 10.8.1 Steering assistance at risk of collision
 - 10.8.2 Activating or deactivating steering assistance during collision risks
 - 10.8.3 Symbols and messages for steering assistance during collision risks
 - 10.8.4 Steering assistance during collision risks limitations
 - 10.8.5 Run-Off Mitigation with steering assistance
 - 10.8.6 Steering assistance during collision risks from oncoming traffic
 - 10.8.7 Steering assistance during collision risks from behind
- 10.9 Driver Alert Control
 - 10.9.1 Driver Alert Control
 - 10.9.2 Activating and deactivating Driver Alert Control
 - 10.9.3 Selecting guidance to a rest area if the Driver Alert Control warning has been given
 - 10.9.4 Driver Alert Control limitations
- 10.10 Lane Keeping Aid
 - 10.10.1 Lane Keeping Aid
 - 10.10.2 Activating and deactivating Lane Keeping Aid
 - 10.10.3 Differences between Pilot Assist and Lane Keeping Aid

- 10.10.4 Selecting type of assistance for Lane Keeping Aid
- 10.10.5 Lane Keeping Aid symbols and messages
- 10.10.6 Lane Keeping Aid display
- 10.10.7 Lane Keeping Aid limitations
- 10.11 Electronic Stability Control
 - 10.11.1 Electronic Stability Control
 - 10.11.2 Electronic Stability Control symbols and messages
 - 10.11.3 Electronic Stability Control in sport mode
 - 10.11.4 Activating and deactivating Sport mode for Electronic Stability Control
- 10.12 Road Sign Information
 - 10.12.1 Road Sign Information
 - 10.12.2 Road Sign Information and Sensus Navigation
 - 10.12.3 Activating and deactivating Road Sign Information
 - 10.12.4 Road Sign Information limitations
 - 10.12.5 Speed limit and speed camera warnings from Road Sign Information
 - 10.12.6 Activating and deactivating warnings from Road Sign Information
 - 10.12.7 Road Sign Information display
- 10.13 Parking functions
 - 10.13.1 Parking Assist
 - 10.13.1.1 Park Assist
 - 10.13.1.2 Park Assist front, rear and sides
 - 10.13.1.3 Activating and deactivating the Park Assist system
 - 10.13.1.4 Park Assist symbols and messages
 - 10.13.1.5 Park Assist limitations
 - 10.13.2 Park Assist Pilot
 - 10.13.2.1 Park Assist Pilot
 - 10.13.2.2 Types of parking with Park Assist Pilot
 - 10.13.2.3 Using Park Assist Pilot
 - 10.13.2.4 Leaving a parallel parking space with Park Assist Pilot
 - 10.13.2.5 Park Assist Pilot messages
 - 10.13.2.6 Park Assist Pilot limitations
 - 10.13.3 Park Assist Camera
 - 10.13.3.1 Park Assist Camera
 - 10.13.3.2 Activating Park Assist Camera
 - 10.13.3.3 Park Assist Camera symbols and messages
 - 10.13.3.4 Park Assist Camera trajectory lines
 - 10.13.3.5 Location and field of vision of Park Assist Cameras
 - 10.13.3.6 Park Assist sensor field
- 10.14 Camera and radar sensor
 - 10.14.1 Recommended maintenance for the camera and radar units
 - 10.14.2 Camera and radar unit symbols and messages
 - 10.14.3 Camera and radar unit limitations
 - 10.14.4 Camera
 - 10.14.5 Radar sensor
 - 10.14.6 Radar sensor type approval
- 10.15 Driver support systems
- 10.16 Driver support safety check at start
- 10.17 Driver support warnings
- 10.18 Speed-dependent steering wheel resistance
- 10.19 Drive modes when using time interval to vehicle
- 10.20 Braking assist after a collision
- 11. Electric motor and charging

- 11.1 Charging hybrid battery
 - 11.1.1 Charging status in the instrument panel
 - 11.1.2 Regenerative braking
 - 11.1.3 Charging status in the vehicle's charging socket
 - 11.1.4 General information about charging cables
 - 11.1.5 Residual current device in charging cable
 - 11.1.6 Charging status in the charging cable's control module
 - 11.1.7 Charging cable temperature monitoring
 - 11.1.8 Hybrid vehicle charging via wall outlet
 - 11.1.9 Hybrid vehicle charging
 - 11.1.10 Stopping hybrid vehicle charging
 - 11.1.11 Charging time
- 11.2 Hybrid battery gauge
- 11.3 Hybrid gauge
- 11.4 Drive systems
- 11.5 Hold and Charge
- 11.6 Drive modes
- 11.7 General information about electric vehicles
- 11.8 Hybrid symbols and messages in the instrument panel
- 11.9 Long-term storage of vehicles with hybrid batteries
- 11.10 Range in electric mode
- 11.11 Economical driving
- 11.12 Recycling of batteries
- 11.13 Hybrid battery

12. Starting and driving

- 12.1 Starting and switching off vehicle
 - 12.1.1 Electronic immobilizer
 - 12.1.2 Starting the vehicle
 - 12.1.3 Jump starting using another battery
 - 12.1.4 Switching off the vehicle
 - 12.1.5 Ignition modes
 - 12.1.6 Selecting ignition mode
- 12.2 Transmission
 - 12.2.1 The kickdown function
 - 12.2.2 The Launch function
 - 12.2.3 Transmission
 - 12.2.4 Automatic transmission
 - 12.2.5 Shifting gears with automatic transmission
 - 12.2.6 Frequently asked questions about shifting during electric propulsion
 - 12.2.7 Automatic transmission symbols and messages
 - 12.2.8 Shiftlock
- 12.3 Brakes
 - 12.3.1 Foot brake
 - 12.3.1.1 Brake Assist System

1. Owner's information

1.1. Owner's information

Owner's information is available in several different formats, both digital and printed. The Owner's Manual is available on the vehicle's center display and on Volvo Cars' support site^[1]. There is also a supplement to the Owner's Manual containing information about e.g. fuses, specifications, etc. in the glove compartment. A printed Owner's Manual can be ordered.

Vehicle's center display^[2]

In the center display, pull down Top view and tap **Owner's manual**. This gives you access to visual navigation with exterior and interior images of the vehicle. The information is searchable and is divided into categories.

Volvo Cars support site^[1]

Volvo Cars' website and support site contain additional information about your vehicle.

Go to <u>volvocars.com/intl/support [https://www.volvocars.com/intl/support]</u> and select your country. The website is available on most markets.

Contact information for customer support and your nearest Volvo retailer are available on the support site. If your vehicle is equipped with Sensus Navigation, it is also possible to download maps.

Printed information

The glove compartment contains a printed supplement to the Owner's Manual^[2], which contains information on fuses and specifications as well as a summary of important and practical information.

Other printed information may also be provided in the vehicle, depending on equipment level, market, etc.

A printed Owner's Manual and accompanying supplement can also be ordered. Contact a Volvo retailer to order.

Important

The driver is always responsible for operating the vehicle in a safe manner and adhering to all applicable laws and regulations. It is also important that the vehicle is operated, maintained and serviced according to Volvo's recommendations provided in the owner's information.

If the information in the center display differs from the printed information, the printed information always takes precedence.

(i) Note

Changing languages in the center display could mean that certain owner's information will not comply with national or local laws and regulations. Do not change to a language you do not speak well, as it can be difficult to find your way back through the menu.

^[1] Not available in all markets.

^[2] For markets without Owner's Manuals in the center display, a complete printed manual is provided along with the vehicle.

1.2. The Owner's Manual and the environment

The Owner's Manual is printed on paper from responsibly managed forests.

The Forest Stewardship Council (FSC)[®] symbol certifies that the paper pulp in the printed Owner's Manual comes from FSC[®]- certified forests or other responsibly managed sources.

1.3. Using the Owner's Manual

To get to know your new vehicle, read the Owner's Manual before driving it for the first time.

Reading your Owner's Manual is a way to familiarize yourself with new features and functions, get advice on how to handle your vehicle in different situations, and to learn how to take advantage of everything your Volvo has to offer. Pay particular attention to the safety warnings provided in the Owner's Manual.

Volvo continuously works to develop and improve our products. Modifications can mean that information, descriptions and illustrations in the Owner's Manual differ from the equipment in the vehicle. We reserve the right to make changes without prior notice.

© Volvo Car Corporation

Option/accessory

In addition to standard equipment, the Owner's Manual also describes options (factory-installed equipment) and certain accessories (extra retrofitted equipment).

All, at the time of publication known, options and accessories are marked with an asterisk: *.

The equipment described in the Owner's Manual is not available in all vehicles. Vehicles may be equipped differently depending on market requirements and national or local laws and regulations.

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note.

22 / 1010

The intention of this owner's information is to explain all of the possible features, functions, options and accessories included in a Volvo vehicle. It is not intended as an indication or guarantee that all of these features, functions and options are included in every vehicle. Some terminology used may not exactly match terminology used in sales, marketing and advertising materials.

For more information on which equipment is standard and which is an option or accessory, please contact your Volvo retailer.

Decals

There are various types of decals affixed in the vehicle to communicate important information in a clear manner. The importance of these decals is explained as follows, in descending order of importance.

Risk of injury

Black ISO symbols on a yellow warning field, white text/image on a black message field. Used to indicate potential danger. Ignoring a warning of this type could result in serious injury or death.

Risk of damage

White ISO symbols and white text/image on a black or blue warning field and message field. Used to indicate potential danger. Ignoring a warning of this type could result in damage.

White ISO symbols and white text/image on a black message field.

(i) Note

The decals shown in the Owner's Manual do not claim to be exact reproductions of those found in the vehicle. The purpose is to show approximately how they look and about where they are located. The information that applies for your vehicle in particular is found on the decal on the vehicle.

Illustrations, images and video clips

Illustrations, images and video clips used in the Owner's Manual are sometimes generic and are intended to provide an overview or an example of a certain function or feature. They may vary depending on equipment level and market and may differ from the appearance of your vehicle.

* Option/accessory.

1.4. Owner's Manual in the center display

The Owner's Manual is available in the vehicle's center display^[1].

() Important

To familiarize yourself with important safety instructions and to optimize your experience, Volvo recommends reading the owner's information under each category in the center display in its entirety before driving the vehicle for the first time.

(!) Important

The driver is always responsible for operating the vehicle in a safe manner and adhering to all applicable laws and regulations. It is also important that the vehicle is operated, maintained and serviced according to Volvo's recommendations provided in the owner's information.

Finding information in the vehicle's center display

You can access the Owner's Manual by:

- 1 Swiping from the top downwards on the center display to open Top view.
- 2 Tapping Owner's Manual.

Find information by:

- using the search function
- visually navigating using exterior and interior images
- clicking through categories.

(i) Note

The digital Owner's Manual is not available during driving.

Changing languages in the center display could mean that some of the owner's information will not comply with national or local rules and regulations. Do not change to a language that you do not understand well, as this could make it difficult for you to navigate back through the menu.

Shortcut to related owner's information

There is a shortcut in Top view that opens an article in the Owner's Manual related to the content shown on the screen. For example, **Navigation Manual** is a shortcut to an article related to navigation.

Certain apps in the vehicle only. For downloaded third-party apps, it is e.g. not possible to access app-specific articles.

Printed information and support site^[2]

Other printed information may also be provided in the vehicle, depending on equipment level, market, etc.

The accompanying supplement can also be ordered. Contact a Volvo retailer to order.

The Owner's Manual is also on volvocars.com/intl/support [https://www.volvocars.com/intl/support] [2].

(i) Note
If the information in the digital Owner's Manual and the printed supplement Selected topics from the Owner's Manual differ, the printed information applies.
 [1] Available in most markets. [2] Not available in all markets.

1.5. Navigate in the Owner's Manual in the center display

The digital Owner's Manual can be accessed from the center display's Top view. The contents are searchable and the sections are designed to be easy to navigate.

The Owner's Manual is accessed from Top view.

1 To open the Owner's Manual, pull down Top view in the center display and tap Owner's manual.

There are a number of ways to find information in the Owner's Manual. The options can be accessed from the Owner's Manual start page and from the Top menu.

Opening the menu in the Top menu

- 1 Tap \equiv in the upper list in the Owner's Manual.
- > A menu will open, displaying different options for finding information:

Start page

Tap the symbol to return to the Owner's Manual start page.

Categories

The articles in the Owner's Manual are structured into main and sub-categories. The same article may appear in several relevant categories in order to help make them easier to find.

- Tap Categories. 1
- The main categories are listed.
- Tap a main category (🗋). 2
- > A list of sub-categories (\Box) and articles (\Box) will appear.
- Tap an article to open it. 3

To go back, tap the left arrow.

Quick Guide

Tap the symbol to go to a page with links to a selection of useful articles about the vehicle's more commonly used features and functions. The articles can also be accessed via categories, but have been collected here for quicker access. Tap an article to read it in its entirety.

Exterior and interior hotspots

Exterior and interior overviews of the vehicle. Hotspots are provided for certain functions, components, etc. Tap a hotspot to come to a relevant article.

- Press Exterior or Interior.
- > Exterior or interior images of the vehicle are shown with hotspots. The hotspots lead to articles about the corresponding function, component, etc. Swipe the screen horizontally to scroll between the images.
- Tap a hotspot. 2
- > The title of a relevant article will be displayed.
- **3** Tap the title to open the article.

To go back, tap the left arrow.

Favorites

Tap the symbol to go to articles saved as favorites. Tap an article to read it in its entirety.

Saving or deleting favorite articles

Save an article as a favorite by tapping the \precsim at the upper right when the article is open. When an article has been saved as a favorite, the star symbol will be filled in: \bigstar .

To remove an article from the list of favorites, tap its star again.

Video

Tap the symbol to go to brief instructive videos for various functions in the vehicle.

Information

Tap the symbol for information about the current version of the Owner's Manual in your vehicle and other useful information.

Using the search function in the Top menu

- 1 Tap Q in the Owner's Manual upper menu. A keyboard will appear at the bottom of the screen.
- 2 Enter a search word, e.g. "seat belt".
- > Suggested articles and categories will be displayed as characters are entered.
- **3** Tap the article or category to read it.

2.1. Volvo's innovation areas

2.1.1. Eco-efficiency

Volvo is committed to the well-being of its customers. As a natural part of this commitment, we care about the environment in which we all live. Concern for the environment means an everyday involvement in reducing our environmental impact.

Volvo's environmental activities are based on a holistic view, which means we consider the overall environmental impact of a product throughout its complete life cycle. In this context, design, production, product use, and recycling are all important considerations. In production, Volvo has partly or completely phased out several chemicals including CFCs, lead chromates, asbestos, and cadmium; and reduced the number of chemicals used in our plants 50% since 1991.

Volvo was the first in the world to introduce into production a three-way catalytic converter with a Lambda sond, now called the heated oxygen sensor, in 1976. The current version of this highly efficient system reduces emissions of harmful substances (CO, HC, NOx) from the exhaust pipe by approximately 95 - 99% and the search to eliminate the remaining emissions continues. Volvo is the only automobile manufacturer to offer CFC-free retrofit kits for the air conditioning system of all models as far back as the 1975 model 240. Advanced electronic engine controls and cleaner fuels are bringing us closer to our goal. In addition to continuous environmental refinement of conventional gasoline-powered internal combustion engines, Volvo is actively looking at advanced technology alternative-fuel vehicles.

When you drive a Volvo, you become our partner in the work to lessen the vehicle's impact on the environment. To reduce your vehicle's environmental impact, you can:

- Maintain proper air pressure in your tires. Tests have shown decreased fuel economy with improperly inflated tires.
- Follow the recommended maintenance schedule in your Warranty and Service Records Information booklet.
- Drive at a constant speed whenever possible.
- See a trained and qualified Volvo service technician as soon as possible for inspection if the check engine (malfunction indicator) light illuminates, or stays on after the vehicle has started.
- Properly dispose of any vehicle-related waste such as used motor oil, used batteries, brake pads, etc.
- When cleaning your vehicle, please use genuine Volvo car care products. All Volvo car care products are formulated to be environmentally friendly.

Electrified vehicles

- If possible, precondition the vehicle with the charging cable before driving.
- If preconditioning is not possible in cold weather, use the seat and steering wheel heating primarily. Avoid heating the entire passenger compartment, which reduces the hybrid battery's charge level.
- Choose the Pure drive mode to help minimize electric power consumption.

• In hilly terrain, put the gear selector in mode B to utilize the electric motor's braking function when the accelerator pedal is released. This helps charge the hybrid battery.

2.1.2. Sensus - connection and entertainment

Sensus makes it possible to use apps and turn your vehicle into a Wi-Fi hotspot.

This is Sensus

Sensus provides an intelligent interface and Internet connection to the digital world. An intuitive navigation structure offers access to relevant assistance, information and entertainment when it is needed.

Sensus includes all of the solutions in the vehicle related to entertainment, Internet connection and navigation*, and serves as the user interface between the driver and the vehicle. Sensus is what makes communication between you, the vehicle and the world around you possible.

Information when it's needed, where it's needed

The vehicle's displays present the right information at the right time. Information is presented in different displays depending on how it should be prioritized by the driver.

Different types of information are shown in different displays depending on how the information should be prioritized.

Instrument panel

Instrument panel^[1].

The instrument panel displays information such as speed, incoming phone calls or the track currently playing. It is controlled using the steering wheel keypads.

Center display

Many of the vehicle's main functions are controlled from the center display, a touchscreen that reacts to taps and other gestures. This minimizes the number of physical buttons and controls needed in the vehicle. The screen can also be operated while wearing gloves.

The center display is used to control e.g. the climate and entertainment systems and to adjust the power seats*. The information presented in the center display can be handled by the driver or by someone else in the vehicle.

Voice control system

The voice control system enables the driver to control certain vehicle functions without taking their hands off the wheel. The system can understand natural speech. Use voice control to e.g. play a song, make a phone call, increase the temperature in the passenger compartment or have a text message read aloud.

* Option/accessory.

^[1] The illustration is generic - details may vary according to vehicle model.

32 / 1010

2.2. Volvo ID

2.2.1. Volvo ID

Volvo ID is a personal ID that gives you access to a range of services using a single username and password.

The available services can vary over time and depend on equipment level and market.

One example of a service in which a Volvo ID is needed is to check the vehicle via your phone using the Volvo Cars app^[1].

(i) Note

If the username/password for a service (e.g. Volvo On Call) is changed, the change will also automatically be applied to other services.

A Volvo ID can be created from the vehicle, at <u>volvoid.eu.volvocars.com/Account [https://volvoid.eu.volvocars.com/Account/]</u> or in the Volvo Cars app.

When a Volvo ID is registered in the vehicle, additional services are available. Multiple Volvo IDs can be used for the same vehicle, and multiple vehicles can be linked to the same Volvo ID.

* Option/accessory.

^[1] For Volvo On Call* users.

2.2.2. Creating a Volvo ID

A Volvo ID can be created in various ways. If your Volvo ID was created on <u>volvoid.eu.volvocars.com/Account [https://volvoid.eu.volvocars.com/Account/]</u> or with the Volvo Cars app, the Volvo IDmust also be registered to the vehicle to enable access to the Volvo ID services.

Creating a Volvo ID with the Volvo ID app

- 1 Download the Volvo ID app from Download Center in the center display's App view.
- 2 Start the app and register a personal email address or a cellular phone number.
- 3 Follow the instructions that will be sent automatically to this email address/cell phone number.

> A Volvo ID has now been created and is automatically registered to the vehicle. The Volvo ID services can now be used.

Creating a Volvo ID with the Volvo Cars app

- Download the latest version of the Volvo Cars app to your phone^[1]. 1
- Choose to create a Volvo ID. 2
- The website for creating a Volvo ID will appear. 3
- Enter a personal email address or cell phone number. 4
- Follow the instructions that will be sent automatically to this email address/cell phone number. 5
- > A Volvo ID is created and ready for use.

Creating a Volvo ID on the Volvo Cars website

- Go to volvoid.eu.volvocars.com/Account [https://volvoid.eu.volvocars.com/Account/]. Choose to create a Volvo ID. 1
- Enter a personal email address or cell phone number. 2
- Follow the instructions that will be sent automatically to this email address/cell phone number. 2
- > A Volvo ID is created and ready for use.

Registering your Volvo ID to the vehicle

If your Volvo ID was created using the Volvo Cars app, follow these steps to register the ID to the vehicle:

1 If you have not already done so, download the Volvo ID app from Download Center in the center display's App view.

To download apps the vehicle must be connected to the internet.

2 Start the app and enter your Volvo ID.

(i) Note

- **3** Follow the instructions that will be automatically sent to the email address/cell phone number connected to your Volvo ID.
- > Your Volvo ID has now been registered to the vehicle. The Volvo ID services can now be used.

^[1] Can be downloaded from e.g. the Apple App Store or Google Play.

2.2.3. Problems logging in with Volvo ID

This article describes problems that may arise when logging in with Volvo ID. For example if you have forgotten your password or your Volvo ID username.

Forgotten your password

To reset your password, follow the instructions below:

In the Volvo Cars app^[1]

- 1 Open the Volvo Cars app.
- 2 Select Log in.
- 3 Press Forgot password? and follow the instructions.

You can also change your password at volvoid.eu.volvocars.com/Account [https://volvoid.eu.volvocars.com/Account/].

Login error after creating a new account

Sometimes there may be a delay in the process which can result in an account not being available directly after it has been created. Try again after 24 hours and if the problem persists contact your local Volvo retailer or Volvo Cars customer service for fur-

ther assistance.

What is my Volvo ID (user name)?

If your Volvo ID is connected to the vehicle, you can also access your username in the Volvo ID app in the center display's App view. Your Volvo ID is the same as the registered email address/cellular phone number.

Unlock your Volvo ID

Your account will be locked after 5 failed attempts to log in to the Volvo Cars app^[1]. You can unlock your account by clicking **Forgot password?** in the login screen.

Changed email address

If you get a new email address and still have access to your previous address, you can log in using your old credentials and change your username yourself. If you no longer have access to your old email address, you should create a new Volvo ID using your new address.

Login error after changing Volvo ID (user name)

Make sure you receive a confirmation message verifying your new username. When this has been done you should be able to login using the new username. If you did not receive the confirmation message, your old username will remain. Log in and try again to change the username.

Login error after changing password

Try logging in with your previous password. If this doesn't work, try to reset your password.

Account registered to another market

An account is registered to a specific market and cannot be moved to a different market. To be able to reuse the same email address/cellular phone number, we advise you to first delete your account for the old market and then create a new account for the new market.

E-mail error

If you have entered an email address as username and did not receive a confirmation message after registration, check that you provided a valid email address and that the message was not stopped by a junk mail filter. Try to register your email address again.

Further assistance

If you have not found the solution to a problem regarding Volvo ID and need further assistance, contact your local Volvo retailer or Volvo Cars customer service.

(i) Note

Services available on volvocars.com and for Volvo On Call* may vary depending on market.

^[1] Certain markets only.

* Option/accessory.
2.3. Type approval and licenses

2.3.1. License agreement for instrument panel

A license is an agreement on the right to conduct a certain activity or the right to use someone else's right according to terms and conditions specified in the agreement. The following text is Volvo's agreement with the manufacturer or developer.

Freetype Project License

3rd Party Software Disclaimers and License Agreements Confidential ID 06-00004-004 39 / 75 Revision 06.00A, 2015-06-09 2006-Jan-27 Copyright 1996-2002, 2006 by David Turner, Robert Wilhelm, and Werner Lemberg.

Introduction

The FreeType Project is distributed in several archive packages; some of them may contain, in addition to the FreeType font engine, various tools and contributions which rely on, or relate to, the FreeType Project. This license applies to all files found in such packages, and which do not fall under their own explicit license. The license affects thus the FreeType font engine, the test programs, documentation and makefiles, at the very least. This license was inspired by the BSD, Artistic, and IJG (Independent JPEG Group) licenses, which all encourage inclusion and use of free software in commercial and freeware products alike. As a consequence, its main points are that: o We don't promise that this software works. However, we will be interested in any kind of bug reports. (`as is' distribution) o You can use this software for whatever you want, in parts or full form, without having to pay us. (`royalty-free' usage) o You may not pretend that you wrote this software. If you use it, or only parts of it, in a program, you must acknowledge somewhere in your documentation that you have used the FreeType code. (`credits') We specifically permit and encourage the inclusion of this software, with or without modifications, in commercial products. We disclaim all warranties covering The FreeType Project and assume no liability related to The FreeType Project. Finally, many people asked us for a preferred form for a credit/disclaimer to use in compliance with this license. We thus encourage you to use the following text:

"Portions of this software are copyright © 2013 The FreeType Project (www.freetype.org). All rights reserved."

Legal Terms

0. Definitions – Throughout this license, the terms `package', `FreeType Project', and `FreeType archive' refer to the set of files originally distributed by the authors (David Turner, Robert Wilhelm, and Werner Lemberg) as the `FreeType Project', be they named as alpha, beta or final release. `You' refers to the licensee, or person using the project, where `using' is a generic term including compiling the project's source code as well as linking it to form a `program' or `executable'. This program is referred to as `a program using the FreeType engine'. This license applies to all files distributed in the original FreeType Project, including all source code, binaries and documentation, unless otherwise stated in the file in its original, unmodified form as distributed in the original archive. If you are unsure whether or not a particular file is covered by this license, you must contact us to verify this. The FreeType Project is copyright (C) 1996-2000 by David Turner, Robert Wilhelm, and Werner Lemberg. All rights reserved except as specified below.

1. No Warranty – THE FREETYPE PROJECT IS PROVIDED `AS IS' WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESS OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A

PARTICULAR PURPOSE. IN NO EVENT WILL ANY OF THE AUTHORS OR COPYRIGHT HOLDERS BE LIABLE FOR ANY DAMAGES CAUSED BY THE USE OR THE INABILITY TO USE, OF THE FREETYPE PROJECT. '

2. Redistribution – This license grants a worldwide, royalty-free, perpetual and irrevocable right and license to use, execute, perform, compile, display, copy, create derivative works of, distribute and sublicense the FreeType Project (in both source and object code forms) and derivative works thereof for any purpose; and to authorize others to exercise some or all of the rights granted herein, subject to the following conditions: o Redistribution of source code must retain this license file (`FTL.TXT') unaltered; any additions, deletions or changes to the original files must be clearly indicated in accompanying documentation. The copyright notices of the unaltered, original files must be preserved in all copies of source files. o Redistribution in binary form must provide a disclaimer that states that the software is based in part of the work of the FreeType Team, in the distribution documentation. We also encourage you to put an URL to the FreeType web page in your documentation, though this isn't mandatory. These conditions apply to any software derived from or based on the FreeType Project, not just the unmodified files. If you use our work, you must acknowledge us. However, no fee need be paid to us.

3. Advertising – Neither the FreeType authors and contributors nor you shall use the name of the other for commercial, advertising, or promotional purposes without specific prior written permission. We suggest, but do not require, that you use one or more of the following phrases to refer to this software in your documentation or advertising materials: `FreeType Project', `FreeType Engine', `FreeType library', or `FreeType Distribution'. As you have not signed this license, you are not required to accept it. However, as the FreeType Project is copyrighted material, only this license, or another one contracted with the authors, grants you the right to use, distribute, and modify it. Therefore, by using, distributing, or modifying the FreeType Project, you indicate that you understand and accept all the terms of this license.

4. Contacts – There are two mailing lists related to FreeType: o freetype@nongnu.org. Discusses general use and applications of FreeType, as well as future and wanted additions to the library and distribution. If you are looking for support, start in this list if you haven't found anything to help you in the documentation. o freetype-devel@nongnu.org. Discusses bugs, as well as engine internals, design issues, specific licenses, porting, etc. Our home page can be found at http://www.freetype.org

2.3.2. Type approval for HomeLink[®] * ^[1]

Type approval for HomeLink[®] is provided below.

Country/Area	Type approval
USA and Canada	This device complies with FCC rules part 15 and Industry Canada RSS-210. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) This device must accept any interference that may be received including interference that may cause undesired operation.
Europe	 Gentex Corporation hereby declares that HomeLink[®] Model UAHL5 complies with the Radio equipment directive 2014/53/EU. Wavelengths within which the radio equipment operates: 433.05MHz-434.79MHz <10mW E.R.P. 868.00MHz-868.60MHz <25mW E.R.P. 868.70MHz-868.20MHz <25mW E.R.P. 869.40MHz-869.65MHz <25mW E.R.P. 869.70MHz-870.00MHz <25mW E.R.P. Certificate holder address: Gentex Corporation, 600 North Centennial Street, Zeeland MI 49464, USA

/ Warning

The transmitter has been tested and complies with FCC and IC rules. Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the device.^[2]

* Option/accessory.

^[1] Certain markets only.

^[2] The term "IC:" before the certification/registration number only signifies that Industry Canada technical specifications were met.

2.3.3. License agreement for audio and media

A license is an agreement on the right to conduct a certain activity or the right to use someone else's right according to terms and conditions specified in the agreement. The following texts are Volvo's agreements with manufacturers/developers.

Dirac Unison[®]

Dirac Unison

Dirac Unison co-optimizes the loudspeakers in frequency, time and space for the best possible bass integration and clarity. It enables a faithful reproduction of the acoustic characteristics of specific performance venues. Using advanced algorithms, Dirac Unison controls all loudspeakers digitally based on acoustic high-precision measurements. Like a conductor of an orchestra, it guarantees that the loudspeakers perform in perfect unison.

DivX[®], DivX Certified[®] and associated logos are trademarks of DivX, LLC and are used under license.

This DivX Certified[®] device can play DivX[®] Home Theater video files up to 576p (including .avi, .divx). Download free software at <u>www.divx.com</u> to create, play and stream digital video.

ABOUT DIVX VIDEO-ON-DEMAND: This DivX Certified[®] device must be registered in order to play purchased DivX Video-on-Demand (VOD) movies. To obtain your registration code, locate the DivX VOD section in your device setup menu. Go to <u>vod.divx.com</u> for more information on completing the registration process.

Patent number

Gracenote®

Portions of the content are copyright © of Gracenote or its providers.

Gracenote, the Gracenote logo and logotype, "Powered by Gracenote" and Gracenote MusicID are either registered trademarks or trademarks of Gracenote, Inc. in the United States and/or other countries.

Gracenote[®] End User License Agreement

This application or device contains software from Gracenote, Inc. in Emeryville, California, United States ("Gracenote"). The software from Gracenote (the "Gracenote Software") enables this application to perform disc and/or file identification and obtain music-related information, including name, artist, track, and title information ("Gracenote Data") from online servers or embedded databases (collectively "Gracenote Servers") and to perform other functions. You may use Gracenote Data only by means of the intended End-User functions of this application or device.

You agree that you will use Gracenote Data, the Gracenote Software, and Gracenote Servers for your own personal non-commercial use only. You agree not to assign, copy, transfer or transmit the Gracenote Software or any Gracenote Data to any third party. YOU AGREE NOT TO USE OR EXPLOIT GRACENOTE DATA, THE GRACENOTE SOFTWARE, OR GRACENOTE SERVERS, EXCEPT AS EXPRESSLY PERMITTED HEREIN.

You agree that your non-exclusive license to use the Gracenote Data, the Gracenote Software, and Gracenote Servers will terminate if you violate these restrictions. If your license terminates, you agree to cease any and all use of Gracenote Data, the Gracenote Software, and the Gracenote Servers. Gracenote reserves all rights in all Gracenote data, all Gracenote software and all Gracenote servers, including all ownership rights. Under no circumstances will Gracenote become liable for any payment to you for any information that you provide. You agree that Gracenote, Inc. may enforce its rights under this Agreement against you directly in its own name. The Gracenote service uses a unique identifier to track queries for statistical purposes. The purpose of a randomly assigned numeric identifier is to allow the Gracenote service to count queries without knowing anything about who you are. For more information, see the web page for the Gracenote Privacy Policy for the Gracenote service.

The Gracenote software and each item of Gracenote data are licensed to you "AS IS." Gracenote makes no representations or warranties, express or implied, regarding the accuracy of any Gracenote data from in the Gracenote servers. Gracenote reserves the right to delete data from the Gracenote Servers or to change data categories for any cause that Gracenote deems sufficient. No warranty is made that the Gracenote Software or Gracenote Servers are error-free or that functioning of Gracenote Software or Gracenote is not obligated to provide you with new enhanced or additional data types or categories that Gracenote may provide in the future and is free to discontinue its services at any time.

GRACENOTE DISCLAIMS ALL WARRANTIES EXPRESS OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, TITLE, AND NON-INFRINGEMENT. GRACENOTE DOES NOT WARRANT THE RESULTS THAT WILL BE OBTAINED BY YOUR USE OF THE GRACENOTE SOFTWARE OR ANY GRACENOTE SERVER. IN NO CASE WILL GRACENOTE BE LIABLE FOR ANY CONSEQUENTIAL OR INCIDENTAL DAMAGES OR FOR ANY LOST PROFITS OR LOST REVENUES.

Cet équiperment doit être installé pour fonctionner avec une distance minimale de 10cm entre le radiateuret le corps de l'utilisateur final.

2.3.6. Start and lock system type designations

The following information contains type designations for the start and lock system.

Alarm system

USA FCC ID: MAYDA 5823(3)

This device complies with part 15 of the FCC rules. Operation is subject to the following conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Canada IC: 4405A-DA 5823(3)

This device is subject to the following conditions: (1) This device may not cause interference, and (2) this device must accept any interference, including interference that may cause undesired operation of the device.

Remote keys (Passive Entry */Passive Start)

USA

Volvo Standard Key FCC ID: YGOHUF8423MS

Volvo Tag ID FCC ID: YGOHUF8432MS

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions:

(1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

CAUTION: Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

Canada

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note.

Volvo Standard Key IC: 4008C-HUF8423MS

Volvo Tag ID IC: 4008C-HUF8432MS

This device complies with part 15 of the FCC Rules and Industry Canada license-exempt RSS standard(s). Operation is subject to the following two conditions:

(1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Le présent appareil est conforme aux CNR d'Industrie Canada applicables aux appareils radio exempts de licence. L'exploitation est autorisée aux deux conditions suivantes :

(1) l'appareil ne doit pas produire de brouillage, et (2) l'utilisateur de l'appareil doit accepter tout brouillage radioélectrique subi, même si le brouillage est susceptible d'en compromettre le fonctionnement.

Immobilizer and Passive Entry*/Passive Start systems

USA-FCC ID: LTQV03134

This device complies with part 15 of the FCC rules. Operation is subject to the following two conditions:

(1) This device may not cause harmful interference, and

(2) this device must accept any interference received, including interference that may cause undesired operation.

Any changes or modification not expressly approved by the party responsible for compliance could void the user's authority to operate this equipment.

Canada-IC:3659A-VO3134

This device complies with Industry Canada license-exempt RSS standards. Operation is subject to the following two conditions:

(1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

* Option/accessory.

2.3.7. Customer Privacy Policy

Volvo respects and safeguards the personal privacy of everyone who visits our websites.

This policy refers to the handling of customer data and personal information. The purpose is to give current, past and potential customers a general understanding of:

- The circumstances in which we collect and process your personal data.
- The types of personal data we collect.
- Why we collect your personal data.
- How we process your personal data.

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note.

For more information on the policy, search for support information on volvocars.com [https://www.volvocars.com/].

2.3.8. Terms and Conditions for Services

Volvo offers services that help enhance the vehicle's safety and comfort.

These services comprise everything from assistance in emergencies to navigation and various maintenance services.

Before using the services, it is important to read support information about terms and conditions for the services at volvocars.com [https://www.volvocars.com/].

2.3.9. Navigation license agreements*

The following is information for the end-user of the Sensus Navigation system.

END USER LICENSE AGREEMENT FOR DISTRIBUTION BY HERE

FOR THE AMERICAS/ASIA PACIFIC

END-USER TERMS

The content provided ("Data") is licensed, not sold. By opening this package, or installing, copying, or otherwise using the Data, you agree to be bound by the terms of this agreement. If you do not agree to the terms of this agreement, you are not permitted to install, copy, use, resell or transfer the Data. If you wish to reject the terms of this agreement, and have not installed, copied, or used the Data, you must contact your retailer or HERE North America, LLC (as defined below) within thirty (30) days of purchase for a refund of your purchase price. To contact HERE, please visit <u>www.here.com</u>. The Data is provided for your personal, internal use only and may not be resold. It is protected by copyright, and is subject to the following terms (this "End User License Agreement") and conditions which are agreed to by you, on the one hand, and HERE and its licensors (including their licensors and suppliers) on the other hand. For purposes of these terms, "HERE" shall mean

(a) HERE North America, LLC with respect to Data for the Americas and/or the Asia Pacific region and (b) HERE Europe B.V. for Data for Europe, the Middle East and/or Africa. The Data includes certain information and related content provided under license to HERE from third parties and is subject to the applicable supplier terms and copyright notices set forth at the following URL:

here.com/supplierterms

TERMS AND CONDITIONS

License Limitations on Use: You agree that your lincense to use this Data is limited to and conditioned on use for solely personal, noncommercial purposes, and not for service bureau, timesharing or other similar purposes. Except as otherwise set forth herein, you agree not to otherwise reproduce, copy, modify, decompile, disassemble or reverse engineer any portion of this Data, and may not transfer or distribute it in any form, for any purpose, except to the extent permitted by mandatory laws.

License Limitations on Transfer: Your limited license does not allow transfer or resale of the Data, except on the condition that you may transfer the Data and all accompanying materials on a permanent basis if: (a) you retain no copies of the Data; (b) the recipient agrees to the terms of this End User License Agreement; and (c) you transfer the Data in the exact same form as you

51 / 1010

purchased it by physically transferring the original media (e.g., the CDROM or DVD you purchased), all original packaging, all Manuals and other documentation. Specifically, Multidisc sets may only be transferred or sold as a complete set as provided to you and not as a subset thereof.

Additional License Limitations: Except where you have been specifically licensed to do so by HERE in a separate written agreement, and without limiting the preceding paragraph, your license is conditioned on use of the Data as prescribed in this agreement, and you may not (a) use this Data with any products, systems, or applications installed or otherwise connected to or in communication with vehicles capable of vehicle navigation, positioning, dispatch, real time route guidance, fleet management or similar applications; or (b) with, or in communication with, including without limitation, cellular phones, palmtop and handheld computers, pagers, and personal digital assistants or PDAs.

Warning: This Data may contain inaccurate or incom¬plete information due to the passage of time, changing circumstances, sources used and the nature of collecting comprehensive geographic Data, any of which may lead to incorrect results.

No Warranty: This Data is provided to you "as is", and you agree to use it at your own risk. HERE and its licensors (and their licensors and suppliers) make no guarantees, representations or warranties of any kind, express or implied, arising by law or otherwise, including but not limited to, content, quality, accuracy, completeness, effectiveness, reliability, fitness for a particular purpose, usefulness, use or results to be obtained from this Data, or that the Data or server will be uninterrupted or error free.

Disclaimer of Warranty: HERE AND ITS LICENSORS (INCLUDING THEIR LICENSORS AND SUPPLIERS) DISCLAIM ANY WARRANTIES, EXPRESS OR IMPLIED, OF QUALITY, PERFORMANCE, MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE OR NONINFRINGEMENT. Some States, Territories and Countries do not allow certain warranty exclusions, so to that extent the above exclusion may not apply to you.

Disclaimer of Liability: HERE AND ITS LICENSORS (INCLUDING THEIR LICENSORS AND SUPPLIERS) SHALL NOT BE LIABLE TO YOU IN RESPECT OF ANY CLAIM, DEMAND OR ACTION, IRRESPECTIVE OF THE NATURE OF THE CAUSE OF THE CLAIM, DEMAND OR ACTION ALLEGING ANY LOSS, INJURY OR DAMAGES, DIRECT OR INDIRECT, WHICH MAY RESULT FROM THE USE OR POSSESSION OF THIS DATA; OR FOR ANY LOSS OF PROFIT, REVENUE, CONTRACTS OR SAVINGS, OR ANY OTHER DIRECT, INDIRECT, INCIDENTAL, SPECIAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF YOUR USE OF OR INABILITY TO USE THIS DATA, ANY DEFECT IN THIS DATA, OR THE BREACH OF THESE TERMS OR CON¬DITIONS, WHETHER IN AN ACTION IN CONTRACT OR TORT OR BASED ON A WARRANTY, EVEN IF HERE OR ITS LICENSORS HAVE BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES. Some States, Territories and Countries do not allow certain liability exclusions or damages limitations, so to that extent the above may not apply to you.

Export Control: You agree not to export from any¬where any part of the Data or any direct product thereof except in compliance with, and with all licenses and ap¬provals required under, applicable export laws, rules and regulations, including but not limited to the laws, rules and regulations administered by the Office of Foreign Assets Control of the U.S. Department of Commerce and the Bureau of Industry and Security of the U.S. De¬partment of Commerce. To the extent that any such export laws, rules or regulations prohibit HERE from complying with any of its obligations hereunder to deliver or distribute Data, such failure shall be excused and shall not constitute a breach of this Agreement.

Entire Agreement: These terms and conditions constitute the entire agreement between HERE (and its licensors, including their licensors and suppliers) and you pertaining to the subject matter hereof, and supersedes in their entirety any and all written or oral agreements previously existing between us with respect to such subject matter.

Severability: You and HERE agree that if any portion of this agreement is found illegal or unenforceable, that portion shall be severed and the remainder of the Agreement shall be given full force and effect.

Governing Law: The above terms and conditions shall be governed by the laws of the State of Illinois (for Data for the Americas and/or the Asia Pacific region) or The Netherlands (for Data for Europe, the Middle East and Africa), without giving effect to (i) its conflict of laws provisions, or (ii) the United Nations Convention for Contracts for the International Sale of Goods, which is explicitly excluded. For any and all disputes, claims and actions arising from or in connection with the Data ("Claims"), you agree to submit to the personal juris¬diction of (a) the State of Illinois for Claims related to Data for the Americas and/or the Asia Pacific region pro¬vided to you hereunder, and (b) The Netherlands for Data for Europe, the Middle East and/or Africa provided to you hereunder.

Government End Users: If the Data is being acquired by or on behalf of the United States government or any other entity seeking or applying rights similar to those customarily claimed by the United States government, this Data is a "commercial item" as that term is defined at 48 C.F.R. ("FAR") 2.101, is licensed in accordance with this End User License Agreement, and each copy of Data delivered or otherwise furnished shall be marked and embedded as appropriate with the following "Notice of Use", and be treated in accordance with such Notice:

(Canadian models) ACCORD DE LICENCE D'UTILISATEUR FINAL DESTINÉ À LA DISTRIBUTION

PAR HERE EN LES AMÉRIQUES / ASIE PACIFIQUE

MODALITÉS D'UTILISATION FINALE

Le contenu (« Données ») est livré en mode licence et non de vente. L'ouverture, l'installation, la copie du produit ou autre emploi des Données impliquent le consentement aux modalités de licence. En cas de désaccord avec les modalités de la licence, il est interdit d'installer, copier, utiliser ou transférer les Données. S'il n'y a pas consentement à certaines des modalités de la licence et que les Données ne sont pas déjà installées, copiées ou utilisées le titulaire peut obtenir le rem¬boursement du prix d'achat, en en faisant part dans les trente (30) jours au détaillant HERE North America, LLC (« HERE ») où l'achat a été fait. Pour les coorDonnées de HERE, consulter <u>www.here.com</u> Le disque de Données cartographiques (« Données »), est prévu pour une utilisation personnelle, un usage uniquement interne et ne peut en aucun cas être revendu. Il est protégé par les droits d'auteurs et assujetti aux modalités suivantes du présent « Accord de licence d'utilisateur final », ainsi qu'aux conditions convenues entre l'acquéreur du produit et HERE North America, LLC (« HERE ») ou ses concédants (comprenant concédants et fournisseurs). Aux fins des présentes, "Here" signifie

(a) Here North America, LLC pour ce qui concerne des Données pour les régions Amériques et/ou Asie Pacifique et (b) Here Europe B.V. pour ce qui concerne des Données pour l'Europe, le Moyen¬Orient et/ou l'Afrique. Les Données incluent certaines informations et contenus concédés sous licence à HERE par des tiers. Les Données font l'objet des conditions de fourniture applicables ainsi que des mentions de copyright indiquées sous l'URL suivant:

here.com/supplierterms

MODALITÉS

Restrictions de la licence d'utilisation : Le titulaire de la licence consent à utiliser les Données en question à des fins exclusivement personnelles, non commer¬ciales pour lesquelles la licence a été accordée et non à des fins d'offre de services informatiques, d'exploitation partagée ou autres fins du même type. Le titulaire de la licence consent également à ne reproduire, ne copier, ne modifier, ne décompiler, ne désassembler ou ne concevoir à rebours aucune partie de ces Données et à ne les transférer ni les distribuer sous quelque forme ni à aucune autre fin, sauf dans la mesure permise par les lois prescrites en cette matière.

Restrictions du transfert de la licence : Cette licence restreinte ne permet pas de transférer ou de revendre les Données, sauf à la condition où le transfert des Données et de tous les outils associés est permis sur une base définitive lorsque : (a) aucune copie des Données n'est conservée par le titulaire de la licence; (b) le bénéficiaire accepte les modalités de l'accord de licence de l'utilisateur final; (c) les Données sont transférées sous strictement la même forme qu'à l'achat par cession physique du média original (par ex. le CD-ROM ou DVD d'origine), de l'emballage d'origine, de tous les manuels et autres documents. Les séries multidisques ne peu¬vent être transférées ou vendues que sous leur forme intégrale d'origine et non comme une partie de celle-ci.

Restrictions additionnelles de la licence : Sous réserve des consignes particulières d'utilisation transmises par HERE dans la licence et sans limiter la portée du paragraphe précédent, l'utilisation des Données de la licence est sujette aux conditions du présent accord qui prévoit que l'utilisateur ne peut en aucun cas (a) utiliser les Données avec les produits, les systèmes ou les applications faisant l'objet d'une installation sur des véhicules dotés d'un système de navigation, de positionnement, de répartition, de radioguidage routier en temps réel, de gestion de parcs automobiles et d'applications semblables ou (b) les utiliser avec des dispositifs de positionnement et des appareils électroniques ou informatiques mobiles ou sans fil, y compris les téléphones cellulaires, les ordinateurs de poche ou portables, les téléavertisseurs et les assistants numériques personnels ou PDA.

MISE EN GARDE : Ces Données peuvent comporter des informations inexactes ou incomplètes en raison du passage du temps, de l'évolution des circonstances, des sources utilisées et des difficultés par nature de la collecte exhaustive de Données géographiques, de tout ce qui peut conduire à des résultats incorrects.

No Warranty: This Data is provided to you "as is", and you agree to use it at your own risk. HERE and its licensors (and their licensors and suppliers) make no guarantees, representations or warranties of any kind, express or implied, arising by law or otherwise, including but not limited to, content, quality, accuracy, completeness, effectiveness, reliability, fitness for a particular purpose, usefulness, use or results to be obtained from this Data, or that the Data or server will be uninterrupted or error free.

Non-garantie : Ces Données sont fournies « telles quelles», l'acquéreur de cette licence accepte de l'u¬tiliser à ses risques et périls. HERE et ses titulaires de licences (et leurs concédants et fournisseurs) n'offrent aucune garantie ou déclaration de quelque nature que ce soit, expresse ou implicite, issue du droit ou autrement, quant au contenu, à la qualité, à l'utilité, à l'exactitude, à l'intégralité, à l'efficacité, à la fiabilité, à l'aptitude à l'emploi, à l'usage ou aux résultats découlant de l'emploi des Données, et ne garantissent pas non plus que ces dernières ou le serveur en assurant la transmission fonctionneront sans interruption et sans erreur.

Exonération de garantie : HERE ET SES TITULAIRES DE LICENCES (Y COMPRIS LEURS PROPRES CONCÉDANTS ET FOURNISSEURS) DÉCLINENT TOUTE GARANTIE, EXPRESSE OU IMPLICITE, DE QUALITÉ, DE PERFORMANCE, DE VALEUR MARCHANDE, D'ADÉQUATION À UN USAGE PARTICULIER OU DE NON-CONTREFAÇON. Certains États, territoires et pays n'autorisent pas certaines exclusions de garantie, et, dans cette mesure, les exclusions ci-dessus pourraient ne pas s'appliquer.

Exonération de responsabilité : HERE ET SES CONCÉDANTS (Y COMPRIS LEURS PROPRES CONCÉDANTS ET FOURNISSEURS) NE PEUVENT ÊTRE TENUS RESPONSABLES PAR LE TITULAIRE DE LA LICENCE À L'ÉGARD DE TOUTE RÉCLAMATION, DEMANDE OU ACTION, QUELLE QUE SOIT LA NATURE DE LA CAUSE DE LA REVENDICATION, DEMANDE OU ACTION ALLÉGUANT TOUTE PERTE, BLESSURE OU DES DOMMAGES, DIRECTS OU INDIRECTS, QUI POURRAIENT RÉSULTER DE L'UTILISATION OU LA POSSESSION DE CES DONNÉES, OU DE TOUTE PERTE DE BÉNÉFICES, REVENUS, CONTRATS OU ÉCONOMIE ATTENDUE OU DE TOUT AUTRE DOMMAGE DIRECT, INDIRECT, ACCESSOIRE, PARTICULIER OU CONSÉCUTIF, DÉCOULANT DE L'UTILISATION DU TITULAIRE OU DE L'IMPOSSIBILITÉ D'UTILISER CES DONNÉES, DE TOUT DÉFAUT DE CES DONNÉES, OU DE LA VIOLATION DE CES MODALITÉS OU CONDITIONS, QUE CE SOIT DANS UNE ACTION EN RESPONSABILITÉ CONTRACTUELLE OU DÉLICTUELLE OU FONDÉE SUR UNE GARANTIE, MÊME SI HERE OU SES CONCÉDANTS DE LICENCE ONT ÉTÉ AVISÉS DE LA POSSIBILITÉ D'UN TEL DOMMAGE. Certains États, territoires et pays n'autorisent pas certaines exclusions de responsabilité ou limitations des dommages-in-térêts, dans cette mesure, la disposition ci-dessus pourrait ne pas s'appliquer.

Contrôle des exportations : Le titulaire de la licence accepte, où qu'il soit, de n'exporter aucune partie des Données de tout produit direct des présentes sauf en conformité, ainsi qu'à toutes les licences et autorisations requises ci-après, aux lois applicables relatives à l'exportation, aux règles et règlements, y compris, mais pas uniquement aux lois, règles et règlements administrés par le Bureau du contrôle des avoirs étrangers du département du Commerce des États-Unis et le Bureau de l'industrie et de la sécurité du département du Com¬merce des États¬Unis. HERE est dispensée de ses ob¬ligations en vertu des présentes dans la mesure ou de telles lois, règles ou règlements relatifs à l'exportation de cette nature l'empêcheraient de s'y conformer.

Intégralité de l'accord : Ces modalités constituent l'intégralité de la licence entre HERE (et ses concédants, y compris leurs concédants et fournisseurs) et le titulaire de la licence eu égard à l'objet des présentes et remplace la totalité de toutes les ententes écrites ou orales antérieures conclues entre les parties concernant l'objet des présentes.

Divisibilité : Le titulaire de la licence et HERE reconnaissent que toute partie de l'accord jugée illégale ou inexécutable devra être enlevée et que le reliquat de l'accord restera entièrement en vigueur.

Droit Applicable : les termes et conditions ci-dessus sont assujetties aux lois de l'Etat du Illinois (pour les Données pour les régions Amériques et/ou Asie Pacifique) ou au droit néerlandais (pour les Données pour l'Europe, le Moyen-Orient et/ou l'Afrique), à l'exclusion

(i) des dispositions de conflit des lois, (ii) de la Conven¬tion des Nations Unies sur les Contrats de Vente Internationale de Marchandises, qui est expressément exclue.

Tout litige, réclamation, ou action découlant ou survenant en relation avec les Données (« Réclamations ») sera soumis à la compétence exclusive (a) des tribunaux de l'Etat de l'Illinois pour toutes Réclamations concernant les Données qui vous sont fournies au titre des présentes pour les régions Amériques et/ou Asie Pacifique et, (b) des tribunaux néerlandais pour les Données qui vous sont fournies au titre des présentes pour l'Europe, le Moyen-Orient et/ou l'Afrique.

Utilisateurs finaux du gouvernement : Si les Don¬nées sont en cours d'acquisition par ou pour le compte du gouvernement des États-Unis ou toute autre personne qui cherche à obtenir ou à appliquer des droits similaires à ceux habituellement réclamés par le gouvernement des États-Unis, ces Données sont considérées comme « article commercial » tel que ce terme est défini dans la réglementation 48 CFR (« FAR ») 2,101, dont l'usage est autorisé conformément à la présente licence de l'utilisateur final. Chaque copie de Données livrée ou fournie par d'autres moyens doit être marquée et inscrite, le cas échéant, avec le texte suivant « Avis d'utilisation » et devra être traitée conformément aux Avis de ce type:

AVIS D'UTILISATION

NOM DE L'ENTREPRENEUR (FABRICANT/FOURNISSEUR) :

HERE

ADRESSE :

425 West Randolph Street, Chicago, IL 60606.

Ces Données commerciales sont des éléments tels que définis dans la FAR 2.101 qui sont soumis à la licence de l'utilisateur final en vertu de laquelle ces Données ont été fournies.

© 1987 – 2015 HERE. Tous droits réservés.

Si l'agent de négociation des contrats, un organisme du gouvernement fédéral, ou tout autre fonctionnaire fédéral refuse d'utiliser la légende fournie dans les présentes, le responsable des marchés, l'organisme du gouvernement fédéral, ou tout autre fonctionnaire fédéral doit en aviser HERE avant de rechercher des moyens supplémentaires ou autres droits dans les Données.

55 / 1010

* Option/accessory.

2.3.10. Spotify license agreement

Volvo provides a wide range of services, apps and programs with the aim of making it more convenient, more pleasant and safer for you to use your Volvo. Some of the apps and programs are made by third party companies, and contain software licensed by the third party manufacturer.

Spotify license agreement

This product contains third party software licensed by Spotify: <u>www.spotify.com/connect/third-party-licenses</u> [https://www.spotify.com/connect/third-party-licenses].

2.4. Displays and controls by the driver in a left-hand drive vehicle

The overviews show the location of the vehicle's displays and controls.

Steering wheel and dashboard

- Parking lights, daytime running lights, low beams, high beams, turn signals, front fog lights/cornering illumination*, rear fog light, trip computer reset
- 2 Instrument panel
- 3 Wipers and washers, rain sensor*
- 4 Right-side steering wheel keypad
- 5 Steering wheel adjustment
- 6 Horn

7 Left-side steering wheel keypad

8 Display lighting, unlocking/locking*/closing* the trunk lid/tailgate

Ceiling console

- **1** Front reading lights and courtesy lighting
- 2 Panoramic roof*
- 3 Ceiling console display ON CALL button
- 4 HomeLink[®]*

Center and tunnel console

- 1 Center display
- 2 Start button
- **3** Hazard warning flashers, defrosting, media, drive mode button*
- 4 Electrical outlet, USB port, wireless phone charger*
- 5 Gear selector
- 6 Parking brake
- **7** Auto-hold brakes

Driver's door

- Memory for power front seat*, door mirror settings
- 2 Central locking, power windows, door mirrors and child locks*
- 3 Hood open
- 4 Controls for front seat
- * Option/accessory.

2.5. Technician certification

In addition to Volvo factory training, Volvo supports certification by the National Institute for Automotive Service Excellence (A.S.E.).

Certified technicians have demonstrated a high degree of competence in specific areas. Besides passing exams, each technician must also have worked in the field for two or more years before a certificate is issued. These professional technicians are best able to analyze vehicle problems and perform the necessary maintenance procedures to keep your Volvo at peak operating condition.

Electrified vehicles

Technicians performing work on a vehicle with electrification should also have the necessary training and specialized certification required for performing repairs and/or maintenance on a vehicle with electrification.

/!\ Warning

A number of electrical components in electrified vehicles use high-voltage current and can be extremely dangerous if handled incorrectly. These components and any orange wiring in the vehicle may only be handled by trained and qualified Volvo service technicians.

2.6. Connecting equipment to the vehicle's data link connector

Incorrectly connected or installed software or diagnostic tools may have an adverse effect on the vehicle's electronics.

Volvo strongly recommends that Volvo owners use only genuine, Volvo-approved accessories, and that accessory installations be performed only by a trained and qualified Volvo service technician. Certain accessories only work when the associated software is installed in the vehicle's computer system.

On-board Diagnostic (OBDII) socket under the dashboard on the driver's side.

(i) Note

Volvo Cars takes no responsibility for the consequences of connecting non-authorized equipment to the On-board Diagnostic (OBDII) socket. This socket should only be used by a trained and qualified Volvo service technician.

Type approval

USA

FCC ID: 2AGKKACUII-06

This device complies with part 15 of the FCC rules. Operation is subject to the following two conditions:

(1) This device may not cause harmful interference, and

(2) this device must accept any interference received, including interference that may cause undesired operation.

Warning

Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

Canada

IC: 20839-ACUII06

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note.

This device complies with Industry Canada license-exempt RSS standards. Operation is subject to the following two conditions:

(1) This device may not cause interference, and

(2) this device must accept any interference received, including interference that may cause undesired operation.

2.7. Driver distraction

A driver has a responsibility to do everything possible to ensure his or her own safety and the safety of passengers in the vehicle and others sharing the roadway. Part of this responsibility is avoiding distractions, including performing activities that are not directly related to controlling the vehicle in the driving environment.

Your new Volvo is equipped with feature-rich entertainment and communication systems. You may also own other portable electronic devices for your own convenience. Use these systems and devices safely to avoid distraction.

For all of these systems, we want to provide the following warning that reflects the strong Volvo concern for your safety. Never use these devices or any feature of your vehicle in a way that distracts you from the task of driving safely. Distraction can lead to a serious accident. In addition to this general warning, we offer the following guidance regarding specific new features that may be found in your vehicle:

/ Warning

- Never use a hand-held cellular telephone while driving. Some jurisdictions prohibit cellular telephone use by a driver while the vehicle is moving.
- If your vehicle is equipped with a navigation system, set and make changes to your travel itinerary only with the vehicle parked.
- Never program your audio system while the vehicle is moving. Program radio presets with the vehicle parked, and use your programmed presets to make radio use quicker and simpler.
- Never use portable computers or personal digital assistants while the vehicle is moving.

2.8. Change of market when importing or relocating

If you import a vehicle or move to another country, it is important that you register the vehicle in the new market to help ensure that online services work correctly, that the vehicle meets local laws and regulations, etc.

Visit an authorized Volvo retailer

Visit an authorized Volvo retailer for assistance registering the vehicle in the new market.

If you do not do this then you may experience that apps, Volvo On Call^[1], software downloads and other online services are affected and do not work correctly.

Creating a new Volvo ID in your new home market

When you relocate to another country you should create a Volvo ID in the new country.

If you have already created a Volvo ID in another country and want to use the same email address, you must first delete your Volvo ID in the region you originally created it. You can also create a new Volvo ID with another email address.

For vehicles with Volvo On Call^[1]

Download the Volvo Cars app from the country the vehicle will be used in and pair the app with your vehicle.

(i) Note

Visit an authorized Volvo retailer if you have imported or relocated with your vehicle to a new country.

Available services may vary depending on market and car model.

(i) Note

If the vehicle is exported to another market, Volvo is not responsible for any adaptations to the vehicle in order to meet applicable requirements or laws in the country of import. For more information, see the Warranty and Service Records Information booklet or contact your Volvo workshop.

^[1] Applicable only to markets that have access to Volvo On Call.

2.9. Viewing the Vehicle Identification Number (VIN)

All vehicles have a unique identification number, a VIN^[1]. This number is needed when contacting a Volvo retailer regarding Volvo On Call or with other questions.

- 1 Tap Settings in the center display's Top view.
- **2** Proceed to System \rightarrow System Information \rightarrow Vehicle Identification Number.
- > The vehicle identification number will be displayed.

The VIN can also be found:

- on the first page of the Warranty and Service Records Information booklet
- on the vehicle's registration card

• by looking at the dashboard through the vehicle's windshield.

The VIN has a similar location on all models.

^[1] Vehicle Identification Number

2.10. Data recording

As part of Volvo's commitment to safety and quality, certain information is recorded regarding vehicle operation, functionality and incidents.

US market only:

EDR

This vehicle is equipped with an "Event Data Recorder" (EDR). The main purpose of an EDR is to record, in certain crash or near crash-like situations, such as an air bag deployment or hitting a road obstacle, data that will assist in understanding how a vehicle's systems performed. The EDR is designed to record data related to vehicle dynamics and safety systems for a short period of time, typically 30 seconds or less. The EDR in this vehicle is designed to record such data as:

- How various systems in your vehicle were operating;
- Whether or not the driver and passenger safety belts were buckled/fastened;
- How far (if at all) the driver was depressing the accelerator and/or brake pedal; and,
- How fast the vehicle was traveling.

These data can help provide a better understanding of the circumstances in which crashes and injuries occur. NOTE: EDR data are recorded by your vehicle only if a non-trivial crash situation occurs; no data are recorded by the EDR under normal driving conditions and no personal data (e.g., name, gender, age, and crash location) are recorded. However, other parties, such as law enforcement, could combine the EDR data with the type of personally identifying data routinely acquired during a crash investigation.

To read data recorded by an EDR, special equipment is required, and access to the vehicle or the EDR is needed. In addition to the vehicle manufacturer, other parties, such as law enforcement, that have the special equipment, can read the information if they have access to the vehicle or the EDR.

ASDR

This vehicle is equipped with an Active Safety Data Recorder (ASDR). This data recorder can record information related to the usage of the car, functional errors and active safety actuations (e.g. auto brake). The information saved is used by technicians for service and maintenance to diagnose and repair possible faults that has occurred in the vehicle and to fulfil certain legal requirements. The registered data can also, in congregated form, be used for research- and product development –purposes to continuously improve the safety and quality of Volvo Cars. For more information contact your local Volvo retailer.

Canadian market only:

EDR

This vehicle is equipped with an "Event Data Recorder" (EDR). The main purpose of an EDR is to record, in certain crash or near crash-like situations, such as an air bag deployment or hitting a road obstacle, data that will assist in understanding how a vehicle's systems performed. The EDR is designed to record data related to vehicle dynamics and safety systems for a short period of time, typically 30 seconds or less. The EDR in this vehicle is designed to record such data as:

- How various systems in your vehicle were operating;
- Whether or not the driver and passenger safety belts were buckled/fastened;
- How far (if at all) the driver was depressing the accelerator and/or brake pedal; and,
- How fast the vehicle was traveling.

These data can help provide a better understanding of the circumstances in which crashes and injuries occur. NOTE: EDR data are recorded by your vehicle only if a non-trivial crash situation occurs; no data are recorded by the EDR under normal driving conditions and no personal data (e.g., name, gender, age, and crash location) are recorded. However, other parties, such as law enforcement, could combine the EDR data with the type of personally identifying data routinely acquired during a crash investigation.

To read data recorded by an EDR, special equipment is required, and access to the vehicle or the EDR is needed. In addition to the vehicle manufacturer, other parties, such as law enforcement, that have the special equipment, can read the information if they have access to the vehicle or the EDR.

In addition to the EDR, the vehicle is equipped with a number of computers that continuously control and monitor the vehicle's performance. These computers may record data during normal driving conditions, particularly if they detect a fault relating to the vehicle's operation and functionality or upon activation of the vehicle's active driver support functions (e.g.City Safety or the auto-brake function).

Some of this recorded data is required by technicians performing service and maintenance in order to diagnose and rectify any faults that may have occurred in the vehicle. The recorded information is also needed to enable Volvo to fulfill legal and other regulatory requirements. Information registered in the vehicle is stored in its computers until the vehicle is serviced or repaired.

In addition to the above, the recorded information may be used in aggregated form for research and product development purposes in order to continuously improve the safety and quality of Volvo vehicles.

Volvo will not provide this information to any third parties without the vehicle owner's consent. However, national legislation and regulations may require Volvo to disclose this type of information to law enforcement or other authorities that can claim a legal right to the information. Special technical equipment, which Volvo and workshops that have entered agreements with Volvo have access to, is required to read and interpret the recorded data. Volvo is responsible for ensuring that information provided to Volvo in conjunction with service and maintenance is stored and handled securely and in compliance with applicable legal requirements. For more information, please contact a Volvo retailer.

Vehicle Connectivity Module (VCM High)

Vehicles equipped with VCM High can collect data on the vehicle's safety functions as well as other functions in the vehicle. This data is collected for product development, quality follow-up, safety work and to improve and monitor the vehicle's quality and its safety functions. Data is also collected in order to manage Volvo Cars' warranty commitments and to comply with legal requirements related to engine emission data.

(i) Note

When collecting data, Volvo may use a small portion of the vehicle's data plan, up to 10 MB a month.

2.11. Accessory installation

We strongly recommend that Volvo owners install only genuine, Volvo-approved accessories, and that accessory installations be performed only by a trained and qualified Volvo service technician. Certain functions only work when the associated software is installed in the vehicle's computer system.

- Genuine Volvo accessories are tested to ensure compatibility with the performance, safety, and emission systems in your vehicle. Additionally, a trained and qualified Volvo service technician knows where accessories may and may not be safely installed in your Volvo. In all cases, please consult a trained and qualified Volvo service technician before installing any accessory in or on your vehicle.
- Accessories that have not been approved by Volvo may or may not be specifically tested for compatibility with your vehicle.
- Any of your vehicle's performance and safety systems could be adversely affected if you install accessories that Volvo has not tested, or if you allow accessories to be installed by someone unfamiliar with your vehicle.
- Damage caused by unapproved or improperly installed accessories may not be covered by your new vehicle warranty. See your Warranty and Service Records Information booklet for more warranty information. Volvo assumes no responsibility for death, injury, or expenses that may result from the installation of non-genuine accessories.

2.12. Volvo Structural Parts Statement

Volvo is one of the leading companies for car safety.

Volvo engineers and manufactures vehicles designed to help protect vehicle occupants in the event of a collision.

Volvos are designed to absorb the impact of a collision. This energy absorption system including, but not limited to, structural components such as bumper reinforcement bars, bumper energy absorbers, frames, rails, fender aprons, A-pillars, B-pillars and body panels must work together to maintain cabin integrity and protect the vehicle occupants.

The supplemental restraint system including but not limited to air bags, side curtain air bags, and deployment sensors work together with the above components to provide proper timing for air bag deployment.

Due to the above, Volvo Car USA does not support the use of aftermarket, alternative or anything other than original Volvo parts for collision repair.

Volvo Car USA also recommends using Volvo-approved replacement glass. The use of aftermarket glass, particularly a windshield, can have an adverse effect on collision avoidance and advanced lighting systems.

64 / 1010

In addition Volvo does not support the use or re-use of structural components from an existing vehicle that has been previously damaged. Although these parts may appear equivalent, it is difficult to tell if the parts have been previously replaced with non-OE parts or if the part has been damaged as a result of a prior collision. The quality of these used parts may also have been affected due to environmental exposure.

2.13. Contacting Volvo

Use the following contact information if you would like to get in touch with Volvo in the United States or Canada.

In the USA:
Volvo Car USA
1800 Volvo Place

2.14. Software Updates

So that you as a Volvo customer shall have the best possible experience from your car, Volvo is continuously developing the systems in the cars and the services that you are offered.

The software in your Volvo will be updated to the latest version when the vehicle is serviced at an authorized Volvo retailer. With the latest software update, you can take advantage of available improvements, including those that came with previous software updates.

(i) Note

Functionality after updating may vary depending on market, model, model year and options.

2.15. Important information on accessories and extra equipment

Incorrectly connected or installed accessories or extra equipment may have an adverse effect on the vehicle's electronics.

Volvo strongly recommends that Volvo owners use only genuine, Volvo-approved accessories, and that accessory installations be performed only by a trained and qualified Volvo service technician. Certain accessories only work when the associated software is installed in the vehicle's computer system.

The equipment described in the Owner's Manual is not available in all vehicles. Vehicles may be equipped differently depending on market requirements and national or local laws and regulations.

Optional or accessory equipment may not be available in all countries or markets. Please note that some vehicles may be equipped differently, depending on special legal requirements. For more information on which equipment is standard and which is an option or accessory, please contact your Volvo retailer.

(i) Note

Do not export your Volvo to another country before investigating that country's applicable safety and exhaust emission requirements. In some cases it may be difficult or impossible to comply with these requirements. Modifications to the emission control system(s) may render your Volvo not certifiable for legal operation in the U.S., Canada and other countries.

/ Warning

CALIFORNIA proposition 65

Engine exhaust, some of its constituents, and certain vehicle components contain or emit chemicals known to the state of California to cause cancer, and birth defects or other reproductive harm. In addition, certain fluids contained in vehicles and certain products of component wear contain or emit chemicals known to the State of California to cause cancer, and birth defects or other reproductive harm.

✓ Warning

Certain components of this vehicle such as air bag modules, seat belt tensioners, adaptive steering columns, and button cell batteries may contain Perchlorate material. Special handling may apply for service or vehicle end of life disposal.

See www.dtsc.ca.gov/hazardouswaste/perchlorate.

✓ Warning

The driver is always responsible for operating the vehicle in a safe manner and for complying with current statutes and regulations.

It is also essential to maintain and service the vehicle according to Volvo's recommendations as stated in the owner's information and the Warranty and Service Records Information booklet.

If the on-board information differs from the printed owner's manual, the printed information always takes precedence.

3.1. Seat belts

3.1.1. Seat belts

Seat belts should always be worn by all occupants in your vehicle. Children should be properly restrained using an infant seat, adjustable child seat or booster cushion as determined by age, weight and height.

Seat belt use is mandatory in most states and provinces.

Seat belt maintenance

Check periodically that the seat belts are in good condition. Use water and a mild detergent for cleaning. Check the seat belt mechanism's function as follows: attach the seat belt and pull rapidly on the strap.

/! Warning

- Never repair the belt yourself. Repairs should only be performed by a trained and qualified Volvo service technician.
- Any device used to induce slack into the shoulder belt portion of the three-point belt system will have a detrimental effect on the amount of protection available in the event of a collision.
- The seat back should not be tilted too far back. The shoulder belt must be taut in order to function properly.
- Do not use any type of child restraint in the front passenger seat. We recommend that children who have outgrown these devices sit in the rear seat with the seat belt properly fastened.

3.1.2. Buckling and unbuckling seat belts

Make sure that all passengers have buckled their seat belts before starting to drive.

Buckling seat belts

1 Pull out the belt slowly and make sure it is not twisted or damaged.

(i) Note

The seat belt is equipped with a seat belt retractor that will lock up in the following situations:

- if the belt is pulled out too quickly.
- during braking and acceleration.
- if the vehicle is leaning excessively.
- when driving in sharp turns.
- if the automatic locking retractor/emergency locking retractor (ALR/ELR) is activated. Each seat belt (except for the driver's) is equipped with an ALR function, which is designed to keep the seat belt taut when installing a child restraint. ALR is activated when the seat belt is pulled out as far as possible. If this is done, a sound from the seat belt retractor will be audible, which is normal. The seat belt can now only be fed into the retractor, not pulled out. This function is automatically disabled when the seat belt is unbuckled and fully retracted.
- **9** Buckle the seat belt by pushing the latch plate into the receptacle.
- > A distinct "click" indicates that the belt is locked into place.

Warning

Always insert the seat belt latch plate into the belt buckle on the correct side. Failure to do so could cause the seat belts and belt buckles to malfunction in a collision. There is a risk of serious injury.

3 The height of the seat belts in the front seats can be adjusted.

Press the button on the seat belt holder and move the belt up or down.

Position the belt as high as possible without it chafing against the neck.

The belt should be positioned closely over the shoulder (against the collarbone, not down over the arm).

4 Tighten the lap section of the seat belt over the hips by pulling the diagonal section upward toward the shoulder.

The lap section of the seat belt should be positioned low on the hips (not against the abdomen).

Never use a seat belt for more than one occupant. Never wear the shoulder portion of the belt under the arm, behind the back or otherwise out of position. Such use could cause injury in the event of an accident. As seat belts lose much of their strength when exposed to violent stretching, they should be replaced after any collision, even if they appear to be undamaged.

/ Warning

Do not use clips or fasten the belts around hooks or other parts of the interior. This will prevent the seat belt from fitting properly.

Vi Warning

Never damage the seat belts and never insert any foreign objects into the belt buckle. This may cause the seat belts and belt buckles to malfunction in a collision. There is a risk of serious injury.

Unbuckling seat belts

- 1 Press the red button on the seat belt receptacle and make sure the seat belt retracts fully into the retractor slot.
- 2 If it does not fully retract, guide the belt manually into the slot and make sure it does not hang loose.

3.1.3. Seat belt tensioners

The vehicle is equipped with standard and electric* seat belt tensioners that can help tension the seat belt in a critical situation or collision.

Standard seat belt tensioners

The seat belts on the front seats and rear outboard seats are equipped with standard seat belt tensioners.

In a collision of sufficiently violent force, the seat belt tensioners will tension the seat belts in order to more effectively restrain the occupants.

Electric seat belt tensioners*

The driver's and front passenger's seat belts are equipped with electric seat belt tensioners.

The seat belt tensioners work together and can be activated in conjunction with the Rear Collision Warning^{*} and assistance during collision risks driver support systems. In critical situations, such as if the vehicle brakes suddenly, begins to skid or runs off the road (e.g if the vehicle rolls into a ditch, lifts off the ground or hits an obstacle in the road), or if there is a risk of collision, the seat belts can be pulled taut by the seat belt tensioner's electric motor.

The electric seat belt tensioner helps to position the occupant more effectively in the seat, which reduces the risk of the occupant striking the interior of the passenger compartment and improves the effect of other safety systems such as the airbags.

When a critical situation has passed, the seat belt and the electric seat belt tensioner are reset automatically. However, they can also be reset manually.

(!) Important

If the passenger airbag is deactivated, the passenger-side electric seat belt tensioner is also deactivated.

/ Warning

Never attempt to alter or repair the seat belt on your own. Volvo recommends contacting an authorized Volvo workshop.

If the seat belt has been exposed to extreme forces, e.g. in conjunction with a collision, the entire seat belt must be replaced. Even if the seat belt appears undamaged, some of its protective properties may have been lost. Also replace the seat belt if it is worn or damaged. The new seat belt must be type approved and intended for the same seating position as the replaced seat belt.

* Option/accessory.

3.1.4. Resetting the electric seat belt tensioners*

The electric seat belt tensioners are designed to be reset automatically, but if the seat belt remains taut it can be reset manually.

- 1 Stop the vehicle in a safe location.
- 2 Unbuckle the seat belt and then rebuckle it.
- > The seat belt and the electric seat belt tensioner will be reset.

Never attempt to alter or repair the seat belt on your own. Volvo recommends contacting an authorized Volvo workshop.

If the seat belt has been exposed to extreme forces, e.g. in conjunction with a collision, the entire seat belt must be replaced. Even if the seat belt appears undamaged, some of its protective properties may have been lost. Also replace the seat belt if it is worn or damaged. The new seat belt must be type approved and intended for the same seating position as the replaced seat belt.

* Option/accessory.

3.1.5. Door and seat belt reminders

This system is intended to remind occupants to buckle their seat belts and to alert the driver if a door, hood or other opening (trunk, sunroof, etc.) is open.
Graphics in the instrument panel

Graphics in the instrument panel with various types of warnings. The warning colors for the doors/tailgate vary depending on the vehicle's speed.

The instrument panel graphic shows the seats where seat belts are buckled and not buckled.

The same graphic also indicates if the hood, tailgate, fuel filler door or any door is open.

Confirm the graphic by briefly pressing the O button on the right-side steering wheel keypad.

Seat belt reminder

Reminder light in ceiling console.

A seat belt reminder light illuminates in the ceiling console and a warning symbol is displayed in the instrument panel.

The audible reminder varies depending on the vehicle's speed, driving time and distance driven.

A seat belt status graphic in the instrument panel indicates when the driver's or a passenger's seat belt is buckled or unbuckled.

Child seats are not included in the seat belt reminder system.

Front seats

An audible signal and an indicator light remind unbuckled occupants to fasten their seat belts.

Rear seat

The rear seat belt reminder has two functions:

- To indicate which seat belts are buckled in the rear seats. This will also be displayed in an instrument panel graphic.
- To provide audio and visual reminders if any seat belt in the rear seat is removed while the vehicle is in motion. The reminder will stop when the seat belt has been rebuckled.

Door/hood/tailgate and fuel filler door reminder

If the hood, tailgate, fuel filler door or any door is not properly closed, this will be indicated by a graphic in the instrument panel. Stop the vehicle safely and close the open door, hood, etc.

If the vehicle is moving at a speed under approx. 10 km/h (6 mph), the information symbol will illuminate in the instrument panel.

If the vehicle is moving at a speed above approx. 10 km/h (6 mph), the warning symbol will illuminate in the instrument panel.

3.2. Airbags

3.2.1. Airbags

The vehicle is equipped with a number of different airbags to help protect the driver and passengers.

Verning

- If the airbag warning light stays on after the engine has started or if it illuminates while you are driving, have the vehicle inspected by a trained and qualified Volvo service technician as soon as possible.
- Never attempt to alter or repair any of the vehicle's safety systems yourself. Incorrectly performed repairs to any system could impair function and lead to serious injury. All work on these systems should be performed by a trained and qualified Volvo service technician.

✓ Warning

If your vehicle has become water-damaged in any way (e.g., soaked floor mats/standing water on the floor of the vehicle), do not attempt to start the engine. This may cause airbag deployment, which could result in serious injury. Volvo recommends towing the vehicle directly to an authorized Volvo workshop.

Before attempting to tow the vehicle:

- 1. Switch off the ignition for at least 10 minutes and disconnect the battery.
- 2. Follow the instructions for manually overriding the shiftlock system.

Deployed airbags

V Warning

If any of the airbags have deployed:

- Do not attempt to drive the vehicle. Have it towed to an authorized workshop.
- If necessary, seek medical attention.

3.2.2. Driver/passenger side front airbags

As a supplement to the seat belts, the vehicle is equipped with driver and passenger side front airbags.

Driver/passenger side front airbags.

In a frontal collision, the airbags help protect the driver's and passenger's head, neck, face and chest and the driver's knees and legs.

A collision of a sufficiently violent force will trigger the sensors and one or more airbags will inflate. The airbag helps cushion the initial impact of the collision for the passenger. The airbag deflates when compressed by the collision. A small amount of powder will also be released from the airbag. This may appear to be smoke and is normal. The entire process, from inflation to deflation of the airbag, occurs within tenths of a second.

(i) Note

The sensors react differently depending on the circumstances of the accident and whether or not the seat belt is used. This applies to all belt positions.

There may therefore be accident situations in which only one (or none) of the airbags are deployed. The sensors monitor the impact of the collision and react accordingly to deploy one, several or no airbags.

/ Warning

The seat belt and the airbag work together. If the seat belt is not used or is used incorrectly, the airbag may not provide the intended protection in a collision.

To help prevent injury in the event the airbag is deployed, passengers should sit as upright as possible, with their feet on the floor and their backs against the seat backrest.

✓ Warning

Volvo recommends contacting an authorized Volvo workshop for repairs. Incorrectly performed repairs to the airbag system could impair function and lead to serious injury.

The front airbag system

The front airbag system includes gas generators surrounded by the airbags, and deceleration sensors that activate the gas generators, causing the airbags to be inflated with nitrogen gas.

As the movement of the seats' occupants compresses the airbags, some of the gas is expelled at a controlled rate to provide better cushioning. The belt tensioners minimize slack in the seat belts and are activated for occupants wearing their seat belts. The entire process, from inflation to deflation of the airbag, occurs within tenths of a second.

The location of the front airbags is indicated by the AIRBAG marking on the steering wheel pad and above the glove compartment, and by decals on both sun visors and on the front and far right side of the dashboard.

The driver's side front airbag is folded and located in the steering wheel hub.

The knee airbag is folded on the underside of the dashboard on the driver's side. AIRBAG is embossed on the panel.

The passenger's side front airbag is folded behind a panel located above the glove compartment.

/ Warning

- The airbags in the vehicle are designed to be a SUPPLEMENT to-not a replacement for-the three-point seat belts. For maximum protection, wear seat belts at all times. Be aware that no system can prevent all possible injuries that may occur in an accident.
- Never drive with your hands on the steering wheel pad/airbag housing.
- The front airbags are designed to help prevent serious injury. Deployment occurs very quickly and with considerable force. During normal deployment and depending on variables such as seating position, one may experience abrasions, bruises, swellings, or other injuries as a result of deployment of one or both of the airbags.
- When installing any accessory equipment, make sure that the front airbag system is not damaged. Any interference in the system could cause malfunction.

Front airbag deployment

• The front airbags are designed to deploy during certain frontal or front-angular collisions, impacts, or decelerations, depending on the crash severity, angle, speed and object impacted. The airbags may also deploy in certain non-frontal collisions where rapid deceleration occurs.

The airbag system's sensors, which trigger the front airbags, are designed to determine if the collision is powerful enough to activate the belt tensioners and/or the airbags.

However, not all frontal collisions activate the front airbags.

- If the collision involves a nonrigid object (e.g., a snow drift or bush), or a rigid, fixed object at a low speed, the front airbags Ð will not necessarily deploy.
- Front airbags do not normally deploy in a side impact collision, in a collision from the rear or in a rollover situation.
- The amount of damage to the bodywork does not reliably indicate if the airbags should have deployed or not. Ð

(i) Note

- The front airbags and seat belt tensioners may be activated in a collision. The airbags are only activated one time during an accident. Some noise occurs and a small amount of powder is released. The release of the powder may appear as smoke-like matter. This is a normal characteristic and does not indicate fire.
- Volvo's front airbags use special sensors that are integrated with the front seat buckles. The point at which the airbag deploys is determined by whether or not the seat belt is being used, as well as the severity of the collision.
- Collisions can occur where only one of the airbags deploys. If the impact is less severe, but severe enough to present a clear injury risk, the airbags are triggered at partial capacity. If the impact is more severe, the airbags are triggered at full capacity.

Warning

- Do not use child safety seats or child booster cushions/backrests in the front passenger's seat. Volvo follows NHTSA's recommendations and recommends that ALL children up to and including 12 years of age sit in the rear seat. This is very strongly recommended for children in rear-facing child seats. See also the Occupant Classification System information.
- Never drive with the airbags deployed. The fact that they hang out can impair the steering of your vehicle. Other safety systems can also be damaged.
- The smoke and dust formed when the airbags are deployed can cause skin and eye irritation in the event of prolonged exposure.

Should you have questions about any component in the SRS system, please contact a trained and qualified Volvo service technician or Volvo customer support:

Airbag decals

Airbag decal on the outside of both sun visors.

Passenger's side airbag decal.

/ Warning

- Children must never be allowed in the front passenger's seat.
- Occupants in the front passenger's seat must never sit on the edge of the seat, sit leaning toward the instrument panel or otherwise sit out of position.
- The occupant's back must be as upright as comfort allows and be against the seat back with the seat belt properly fastened.
- Feet must be on the floor, e.g., not on the dash, seat or out of the window.

/ Warning

- No objects or accessory equipment, e.g. dashboard covers, may be placed on, attached to, or installed near the air bag cover (the area above the glove compartment) or the area affected by airbag deployment.
- There should be no loose articles, such as coffee cups on the floor, seat, or dashboard area.
- Never try to open the airbag cover on the steering wheel or the passenger's side dashboard. This should only be done by a trained and qualified Volvo service technician.
- Failure to follow these instructions can result in injury to the vehicle's occupants.

3.2.3. Occupant Classification System

The Occupant Classification System (OCS) is designed to meet the regulatory requirements of Federal Motor Vehicle Safety Standard (FMVSS) 208 and is designed to disable (will not inflate) the passenger's side front airbag under certain conditions.

OCS indicator light.

The front passenger-side airbag is either enabled or disabled depending on the classification of the passenger in the front passenger seat.

Volvo follows NHTSA's recommendations and recommends that ALL children up to and including 12 years of age sit in the rear seat and are restrained in a suitable manner appropriate to their height and weight. This is strongly recommended for children in rear-facing child seats.

Classification of passengers in front pas- senger seat	OCS indicator light status	Passenger's side front airbag status
The passenger is classified as an adult.	OCS indicator light is not lit.	Enabled
The passenger is classified as a small child in a front-facing child seat.	The OCS indicator light is lit or not lit depending on several pa- rameters that determine the most suitable status.	Enabled or disabled depending on several parameters that determine the most suitable status.
The passenger is classified as a small child in a rear-facing child seat.	OCS indicator light is lit.	Disabled
The passenger seat is empty.	OCS indicator light is lit.	Disabled

Occupant Classification System function

OCS works in combination with sensors in the front passenger seat. The sensors are intended to detect the presence, and classification of, an occupant sitting correctly and determine whether the front passenger airbag should be enabled (able to be deployed) or disabled (cannot be deployed).

The OCS uses an indicator light with the text **PASSENGER AIRBAG OFF**, which will illuminate and stay on to remind you that the passenger's side front airbag is disabled. The **PASSENGER AIRBAG OFF** indicator light is located in the ceiling console near the bracket for the rearview mirror.

Always pay attention that the status of the indicator light shows the correct classification both before and while driving when the front passenger seat is occupied.

(i) Note

When the ignition is switched on, the OCS indicator light will illuminate for several seconds while the system performs a self-diagnostic test. The indicator light will then go out or remain illuminated, depending on the classification of the passenger in the front passenger seat.

If a malfunction is detected in the system, the OCS indicator light will remain illuminated and the SRS warning symbol will be shown in the instrument panel along with a text message.

. Warning

If a fault in the system is detected and indicated as described, be aware that the passenger's side front airbag will not deploy in the event of a collision. If this occurs, have the airbag system and Occupant Classification System checked by a workshop as soon as possible. Volvo recommends contacting an authorized Volvo workshop.

Classification of adult

To help ensure accurate classification when a person of adult size is sitting in the front passenger seat, the passenger must:

- be wearing their seat belt
- sit normally in the seat, in the center of the seat cushion
- sit upright in the seat with their shoulders against the backrest

• have their legs comfortably extended with their feet on the floor.

Correct seating position.

Example of incorrect seating position - the passenger must not have slid forward on the seat cushion.

Example of incorrect seating position - the passenger must not fold the backrest to a lying position.

Remember the following when an adult sits in the front passenger seat:

- The passenger must never get up from the seat cushion using the armrest in the door or center console, by pushing their feet against the floor or by pushing against the backrest.
- The passenger must never sit on the side of the seat cushion, slide forward on the seat cushion or fold the backrest to a lying position.
- The passenger must never wear wet or thick clothing, e.g. ski wear or padded garments.
- Never place any objects between the passenger and the seat cushion, e.g. pillows, heating blankets or ordinary blankets, seat liners or mats.
- Never place a radio transmitter (e.g. hunting radio or walkie-talkie) or device that is being charged (e.g. cellular phone, tablet or computer) on or under the seat cushion. Never let anyone sitting on the passenger seat use a radio transmitter or device that is being charged.

/! Warning

Failure to follow the above instructions could adversely affect the Occupant Classification System functions and result in death or serious injury.

If a person of adult size is sitting in the front passenger's seat, but the OCS indicator lamp is on, it is possible that the person isn't sitting properly in the seat.

If this occurs, turn off the vehicle and ask the person to follow the above instructions for accurate classification. Restart the vehicle and have the person remain in this position for about two minutes. This will allow the system to detect that person and enable the passenger's frontal airbag.

If the OCS indicator lamp remains on even after this, the person should be advised to ride in the rear seat.

This may indicate restrictions in the OCS classification ability, e.g. that the person is too light to be classified as an adult. It does not need to indicate an OCS error.

Classification of child

Volvo follows NHTSA's recommendations and recommends that ALL children up to and including 12 years of age sit in the rear seat. This is strongly recommended for children in rear-facing child seats.

If a child in a child restraint is placed in the front passenger seat, the child restraint must be installed according to the manufacturer's instructions to help ensure accurate classification.

Remember the following if a child in a child seat sits in the front passenger seat:

- Never place any items or accessories on the passenger seat, between the child seat and the seat cushion or near to the seat cushion.
- Never place a radio transmitter (e.g. hunting radio or walkie-talkie) or device that is being charged (e.g. cellular phone, tablet or computer) on the seat cushion. Never let anyone sitting on the passenger seat use a radio transmitter or device that is being charged.
- Never place wet clothing or fluids on the passenger seat.
- Always correctly position the child seat so that the entire lower section of the child seat rests against the seat cushion.
- Always place a front-facing child seat as far back as possible against the seat back.

/ Warning

Failure to follow the above instructions could adversely affect the Occupant Classification System functions and result in death or serious injury.

Modifications

If you are considering modifying your vehicle in any way to accommodate a disability, for example by altering or adapting the driver's or front passenger's seat(s) and/or airbag systems, please contact Volvo at:

1-800-663-8255

/ Warning

Never attempt to open, remove or repair any components in the OCS system. Volvo recommends contacting an authorized Volvo workshop. Incorrectly performed repairs to the OCS system could impair function and lead to serious injury.

The front passenger's seat should not be modified in any way. This could affect the function of the OCS system.

3.2.4. Inflatable curtain

The inflatable curtain, Inflatable Curtain (IC), helps to prevent the driver and passengers from striking their heads on the inside of the vehicle during a collision.

The inflatable curtains are installed along both sides of the inside of the roof and help protect occupants in the vehicle's outer seats. IC AIRBAG is embossed on the panels.

A collision of a sufficiently violent force will trigger the sensors and the inflatable curtain will inflate.

\land Warning

Volvo recommends contacting an authorized Volvo workshop for repair. Incorrectly performed repairs to the inflatable curtain system could impair function and lead to serious injury.

✓! Warning

Never hang or attach heavy objects in the handle in the ceiling. The hooks are only intended for lightweight garments (not for hard objects such as umbrellas).

Never screw or mount anything to the vehicle's headlining, door pillars or side panels. This could impair the intended protective properties. Volvo recommends only using Volvo original parts that are approved for placement in these areas.

/! Warning

If objects are loaded higher than the upper edge of the side windows, leave a 10 cm (4 in.) space between the objects and the window. Objects placed closer to this could impede the function of the inflatable curtain concealed inside the headlining.

Warning /!

The inflatable curtain is a supplement to the seat belt. Always wear your seat belt.

3.2.5. Side airbags

The side airbags, on the driver's and passenger sides, protect the chest and hip in a collision.

The side airbags are located in the front seats' outer backrest frames and help protect the driver and front seat passenger.

A collision of a sufficiently violent force will trigger the sensors and one or more side airbags will inflate. The side airbags inflate between the seat occupant and the door panel to help cushion the initial impact of the collision. The airbag deflates when compressed by the collision. The side airbags are normally only deployed on the side of the vehicle impacted by the collision.

/ Warning

Volvo recommends contacting an authorized Volvo workshop for repairs. Incorrectly performed repairs to the side airbag system could impair function and lead to serious injury.

/ Warning

Do not place any objects in the area between the outer edges of the seats and the door panels, as this could impair the function of the side airbags.

Volvo recommends only using seat covers approved by Volvo. Other seat covers could prevent the side airbags from functioning properly.

/ Warning

The side airbag is a supplement to the seat belt. Always wear your seat belt.

3.3. Child safety

3.3.1. Attachment points for child seats

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note.

3.3.1.1. Lower child seat attachment points

The rear seats are equipped with lower child seat attachment points.

The lower child seat attachment points are intended for use with certain rear-facing child restraints.

Always follow the manufacturer's installation instructions when attaching a child seat to the lower child seat attachment points.

Location of child seat attachment points

Location of child seat attachment points in the rear seat.

The child seat attachment points in the rear seat are located on the rear section of the front seat floor rails.

(i) Note

Never store loose items around the support legs of a child seat. Make sure that the child seat's loose parts (straps, for example) are secured in accordance with the child seat's installation instructions.

3.3.1.2. ISOFIX/LATCH lower anchors

Lower anchors for ISOFIX/LATCH-equipped child seats are located in the rear, outboard seats, hidden below the backrest cushions.

Using the ISOFIX/LATCH lower child seat anchors

Location of the ISOFIX/LATCH anchors

Symbols on the seat back upholstery mark the ISOFIX/LATCH anchor positions as shown. To access the anchors, kneel on the seat cushion and locate the anchors by feel. Always follow your child seat manufacturer's installation instructions, and use both ISOFIX/LATCH lower anchors and top tethers whenever possible.

To access the anchors

- 1 Put the child restraint in position.
- 2 Kneel on the child restraint to press down the seat cushion and locate the anchors by feel.
- **3** Fasten the attachment on the child restraint's lower straps to the ISOFIX/LATCH lower anchors.
- **4** Firmly tension the lower child seat straps according to the manufacturer's instructions.

/ Warning

Volvo's ISOFIX/LATCH anchors conform to FMVSS/CMVSS standards. Always refer to the child restraint system's manual for weight and size ratings.

(i) Note

- The rear center seat is not equipped with ISOFIX/LATCH lower tether anchors. If a child restraint is used in this seat, attach the restraint's upper anchor strap (if equipped with these) to the top tether anchor point for this strap and secure the child restraint with the vehicle's center seat belt.
- Always follow your child seat manufacturer's installation instructions, and use both ISOFIX/LATCH lower anchors and top tethers whenever possible.

Fasten the attachment correctly to the ISOFIX/LATCH lower anchors

/ Warning

- Be sure to fasten the attachment correctly to the anchor (see the illustration). If the attachment is not correctly fastened, the child restraint may not be properly secured in the event of a collision.
- The ISOFIX/LATCH lower child restraint anchors are only intended for use with child seats positioned in the outboard seating positions. These anchors are not certified for use with any child restraint that is positioned in the center seating position. When securing a child restraint in the center seating position, use only the vehicle's center seat belt.

3.3.1.3. Top tether anchors

Your Volvo is equipped with child restraint top tether anchorages for all three seating positions in the rear seat. They are located on the rear side of the backrests.

Child restraint anchorages

Top tether anchors and symbols on the rear side of the rear seat backrests.

Securing a child seat

- 1 Place the child restraint on the rear seat.
- 2 Route the top tether strap under the head restraint and attach it to the anchor.
- **3** Attach the strap for the lower anchors in the lower ISOFIX/LATCH attachment points. If the child restraint is not equipped with straps for the lower anchors, or if the child restraint is used on the center seating position, follow the instructions for attaching a child restraint using the automatic locking seat belt.
- 4 Firmly tension all straps.

Refer also to the child seat manufacturer's instructions for information on securing the child seat.

(i) Note

The parcel shelf must be removed before a child seat can be attached in the tether anchors.

- Always refer to the recommendations made by the child restraint manufacturer.
- Volvo recommends that the top tether anchors be used when installing a forward-facing child restraint with upper tether straps.
- Never route a top tether strap over the top of the head restraint. The strap should be routed beneath the head restraint.
- Child restraint anchorages are designed to withstand only those loads imposed by correctly fitted child restraints. Under no circumstances are they to be used for adult seat belts or harnesses. The anchorages are not able to withstand excessive forces on them in the event of collision if full harness seat belts or adult seat belts are installed to them. An adult who uses a belt anchored in a child restraint anchorage runs a great risk of suffering severe injuries should a collision occur.
- Do not install rear speakers that require the removal of the top tether anchors or interfere with the proper use of the top tether strap.

3.3.2. Activating and deactivating child locks

The child locks help prevent the rear doors from being able to be opened from the inside. With the electric child lock, the power windows are also prevented from being operated from the rear seat.

The child lock can be either manual or electric*.

Manual child lock

Manual child lock. This is not the manual door lock.

1 Use the detachable key blade in the key to turn the control.

A The door cannot be opened from the inside.

B The door can be opened from both the outside and the inside.

(i) Note

- The door's knob control only locks that specific door, not both rear doors simultaneously.
- There are no manual child locks on models equipped with electronic child locks.

Electric child lock*

The electric child lock can be activated and deactivated in any ignition mode higher than **0**. The lock can be activated and deactivated up to 2 minutes after the ignition is turned off if no door has been opened.

Button for activation and deactivation.

Rear child lock activated

When the indicator light in the button is lit, the child lock is activated.

If the child lock is activated when the vehicle is switched off, it will remain activated the next time the vehicle is started.

- Rear doors cannot be opened from the inside.
- Rear power windows can only be operated from the driver's door.

Rear child lock deactivated

When the indicator light in the button is off, the child lock is deactivated.

• Rear doors can be opened from the inside and power windows can be operated from the rear seat.

Symbols and messages

Symbol	Message	Meaning
	Rear child lock Activated	The child lock is activated.
	Rear child lock Deactivated	The child lock is deactivated.

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note.

3.3.3. Child safety

Children should always be seated safely when traveling in the vehicle.

General information

Volvo recommends the proper use of restraint systems for all occupants including children. Remember that, regardless of age and size, a child should always be properly restrained in a vehicle.

Your vehicle is also equipped with ISOFIX/LATCH attachments, which make it more convenient to install child seats.

Some restraint systems for children are designed to be secured in the vehicle by lap belts or the lap portion of a lap-shoulder belt. Such child restraint systems can help protect children in vehicles in the event of an accident only if they are used properly. However, children could be endangered in a crash if the child restraints are not properly secured in the vehicle. Failure to follow the installation instructions for your child restraint can result in your child striking the vehicle's interior in a sudden stop.

Holding a child in your arms is NOT a suitable substitute for a child restraint system. In an accident, a child held in a person's arms can be crushed between the vehicle's interior and an unrestrained person. The child could also be injured by striking the interior, or by being ejected from the vehicle during a sudden maneuver or impact. The same can also happen if the infant or child rides unrestrained on the seat. Other occupants should also be properly restrained to help reduce the chance of injuring or increasing the injury of a child.

All states and provinces have legislation governing how and where children should be carried in a vehicle. Find out the regulations existing in your state or province. Recent accident statistics have shown that children are safer in rear seating positions than front seating positions when properly restrained. A child restraint system can help protect a child in a vehicle. Here's what to look for when selecting a child restraint system:

It should have a label certifying that it meets applicable Federal Motor Vehicle Safety Standards (FMVSS 213) - or in Canada, CMVSS 213.

Make sure the child restraint system is approved for the child's height, weight and development - the label required by the standard or regulation, or instructions for infant restraints, typically provide this information.

In using any child restraint system, we urge you to carefully look over the instructions that are provided with the restraint. Be sure you understand them and can use the device properly and safely in this vehicle. A misused child restraint system can result in increased injuries for both the infant or child and other occupants in the vehicle.

When a child has outgrown the child safety seat, you should use the rear seat with the standard seat belt fastened. The best way to help protect the child here is to place the child on a cushion so that the seat belt is properly located on the hips. Legislation in your state or province may mandate the use of a child seat or cushion in combination with the seat belt, depending on the child's age and/or size. Please check local regulations.

A specially designed and tested booster cushion and backrest can be obtained from your Volvo retailer. See also the article "Integrated booster cushion."

/! Warning

- Do not use child safety seats or child booster cushions/backrests in the front passenger's seat. Volvo follows NHTSA's recommendations and recommends that ALL children up to and including 12 years of age sit in the rear seat. This is very strongly recommended for children in rear-facing child seats.
- On hot days, the temperature in the vehicle interior can rise very quickly. Exposure to these high temperatures for even a short period of time can cause heat-related injury or death. Small children are particularly at risk. Never leave children unattended in a vehicle.

Child seats should always be registered with the child seat manufacturer.

Volvo's recommendations

Why does Volvo believe that no child should sit in the front seat of a vehicle? It's quite simple really. A front airbag is a very powerful device designed, by law, to help protect an adult.

Because of the size of the airbag and its speed of inflation, a child should never be placed in the front seat, even if he or she is properly belted or strapped into a child safety seat. Volvo has been an innovator in the field of safety since it was founded. And we have no intention of resting on our laurels. But we need your help. Please remember to put your children in the back seat, and buckle them up.

/ Warning

A child restraint should never be reused if:

- The vehicle has been involved in a collision, no matter how minor
- Its history is unknown
- It is older than the manufacturer's expiration date

Volvo has some very specific recommendations

Always wear your seat belt.

- Airbags are a SUPPLEMENTAL safety device which, when used with a three-point seat belt can help reduce serious injuries during certain types of accidents. Volvo recommends that you do not disconnect the airbag system in your vehicle.
- Volvo strongly recommends that everyone in the vehicle be properly restrained.
- Volvo follows NHTSA's recommendations and recommends that ALL children up to and including 12 years of age sit in the rear seat. This is strongly recommended for children in rear-facing child seats.
- Drive safely!

3.3.4. Child restraints

Suitable child restraints should always be used when children travel in the vehicle.

Child restraint systems

Infant seat

There are three main types of child restraint systems: infant seats, convertible seats and booster cushions. They are classified according to the child's age and size.

The child restraint should be secured using a three-point seat belt, ISOFIX/LATCH anchors or top tether anchors.

Convertible seat

/ Warning

A child seat should never be used in the front passenger seat of any vehicle with a front passenger airbag - not even if the "Passenger airbag off" symbol near the rear-view mirror is illuminated. If the severity of an accident were to cause the airbag to inflate, this could lead to serious injury or death to a child seated in this position.

Booster cushion

/ Warning

Always refer to the child restraint manufacturer's instructions for detailed information on securing the restraint.

/ Warning

- When not in use, keep the child restraint system secured or remove it from the passenger compartment to help prevent it from injuring passengers in the event of a sudden stop or collision.
- A small child's head represents a considerable part of its total weight and its neck is still very weak. Volvo recommends that children up to age 4 travel, properly restrained, facing rearward. In addition, Volvo recommends that children should ride rearward facing, properly restrained, as long as possible.

(i) Note

For child seats in which the child uses one of the vehicle's integrated seat belts, read the Owner's Manual's seat belt recommendations.

(i) Note

Use caution when installing child seats to ensure that sharp edges or protruding parts on the child seat do not damage the vehicle's interior.

Long-term installation and use of child seats could damage the vehicle's interior. Volvo recommends using the kick guard accessory to help protect the vehicle's interior.

Automatic Locking Retractor/Emergency Locking Retractor (ALR/ELR)

To make child seat installation easier, each seat belt (except for the driver's belt) is equipped with a locking mechanism to help keep the seat belt taut.

When attaching the seat belt to a child seat:

- 1 Position the child seat and secure it using the seat belt according to the manufacturer's instructions.
- 2 Pull the seat belt out as far as possible.
- 3 Insert the seat belt latch plate into the buckle (lock) in the usual way.
- 4 Release the seat belt and pull it taut around the child seat.

A sound from the seat belt retractor will be audible at this time and is normal. The belt will now be locked in place. This function is automatically disabled when the seat belt is unlocked and the belt is fully retracted.

/ Warning

Do not use child safety seats or child booster cushions/backrests in the front passenger's seat. We also recommend that children who have outgrown these devices sit in the rear seat with the seat belt properly fastened.

Child restraint registration and recalls

Child restraints could be recalled for safety reasons. You must register your child restraint to be reached in a recall. To stay informed about child safety seat recalls, be sure to fill out and return the registration card that comes with new child restraints.

Child restraint recall information is readily available in both the U.S. and Canada. For recall information in the U.S., call the U.S. Government's Auto Safety Hotline at 1-800-424-9393 or go to https://www-odi.nhtsa.dot.gov/owners/SearchSafetyIssues [https://www-odi.nhtsa.dot.gov/owners/SearchSafetyIssues]. In Canada, visit Transport Canada's Child Safety website at https://www.tc.gc.ca/en/services/road/child-car-seat-safety.html [https://www.tc.gc.ca/en/services/road/child-car-seat-safety.html [https://www.tc.gc.ca/en/services/road/child-car-seat-safety.html].

3.3.5. Infant seats

Suitable child restraints should always be used when children (depending on their age/size) are seated in the vehicle.

Securing an infant seat with a seat belt

Do not place the infant seat in the front passenger's seat

- 1 Place the infant seat in the rear seat of the vehicle.
- 2 Secure the child seat for small children using the seat belt according to the manufacturer's instructions.

Route the seat belt through the infant seat.

/ Warning

- An infant seat must be in the rear-facing position only.
- The infant seat should not be positioned behind the driver's seat unless there is adequate space for safe installation.

/ Warning

A child seat should never be used in the front passenger seat of any vehicle with a front passenger airbag - not even if the "Passenger airbag off" symbol near the rear-view mirror is illuminated. If the severity of an accident were to cause the airbag to inflate, this could lead to serious injury or death to a child seated in this position.

Fasten the seat belt.

Fasten the seat belt by inserting the latch plate into the buckle (lock) until a distinct click is audible.

Pull out the shoulder section of the seat belt.

4 Pull the shoulder section of the seat belt out as far as possible to activate the belt's automatic locking function.

(i) Note

5

The locking retractor will automatically release when the seat belt is unbuckled and allowed to retract fully.

Press the infant seat firmly in place, let the seat belt retract and pull it taut. A sound from the seat belt retractor's auto-

matic locking function will be audible at this time and is normal. The seat belt should now be locked in place.

Check that the infant seat is properly secured.

6 Press and pull the infant seat along the direction of the seat belt to check that it is properly held in place by the seat belt.

✓ Warning

It should not be possible to move the child restraint more than 2.5 cm (1 in.) in any direction along the seat belt path.

When installing infant seats in the rear seat, Volvo recommends maintaining a distance of at least 50 mm (2 inches) from the front-most part of the infant seat to the rearmost part of the seat in front.

The infant seat can be removed by unbuckling the seat belt and letting it retract completely.

3.3.6. Booster cushions

Suitable child restraints should always be used when children (depending on their age/size) are seated in the vehicle.

Securing a booster cushion

Position the child correctly on the booster cushion.

Booster cushions are recommended for children who have outgrown convertible seats.

- Place the booster cushion in the rear seat of the vehicle. 1
- 2 With the child properly seated on the booster cushion, attach the seat belt to or around the cushion according to the manufacturer's instructions.
- Fasten the seat belt by inserting the latch plate into the buckle (lock) until a distinct click is audible. 3

Positioning the seat belt.

Ensure that the seat belt is pulled taut and fits snugly around the child. 4

Warning

- The hip section of the three-point seat belt must fit snugly across the child's hips, not across the stomach.
- The shoulder section of the three-point seat belt should be positioned across the chest and shoulder.
- The shoulder belt must never be placed behind the child's back or under the arm.

3.3.7. Convertible seats

Suitable child restraints should always be used when children (depending on their age/size) are seated in the vehicle.

Securing a convertible seat with a seat belt

Do not place the convertible seat in the front passenger's seat.

Convertible seats can be used in either a forward or rearward-facing position, depending on the age and size of the child.

Route the seat belt through the convertible seat.

✓ Warning

Always use a convertible seat that is suitable for the child's age and size. See the convertible seat manufacturer's recommendations.

1 Place the convertible seat in the rear seat of the vehicle.

/ Warning

- A small child's head represents a considerable part of its total weight and its neck is still very weak. Volvo recommends that children up to age 4 travel, properly restrained, facing rearward. In addition, Volvo recommends that children should ride rearward facing, properly restrained, as long as possible.
- Convertible child seats should be installed in the rear seat only.
- A rear-facing convertible seat should not be positioned behind the driver's seat unless there is adequate space for safe installation.

Attach the seat belt to the convertible seat according to the child restraint manufacturer's instructions.

Fasten the seat belt.

- **3** Fasten the seat belt by inserting the latch plate into the buckle (lock) until a distinct click is audible.
- **4** Pull the shoulder section of the seat belt out as far as possible to activate the belt's automatic locking function.

5

(i) Note

The locking retractor will automatically release when the seat belt is unbuckled and allowed to retract fully.

Press the convertible seat firmly in place, let the seat belt retract and pull it taut. A sound from the seat belt retractor's automatic locking function will be audible at this time and is normal. The seat belt should now be locked in place.

Pull out the shoulder section of the seat belt.

6 Push and pull the convertible seat along the seat belt path to ensure that it is held securely in place by the seat belt.

✓ Warning

It should not be possible to move the child restraint more than 2.5 cm (1 in.) in any direction along the seat belt path.

The convertible seat can be removed by unbuckling the seat belt and letting it retract completely.

Ensure that the convertible seat is securely in place.

/ Warning

A child seat should never be used in the front passenger seat of any vehicle with a front passenger airbag - not even if the "Passenger airbag off" symbol near the rear-view mirror is illuminated. If the severity of an accident were to cause the airbag to inflate, this could lead to serious injury or death to a child seated in this position.

3.3.8. Occupant Classification System

The Occupant Classification System (OCS) is designed to meet the regulatory requirements of Federal Motor Vehicle Safety Standard (FMVSS) 208 and is designed to disable (will not inflate) the passenger's side front airbag under certain conditions.

OCS indicator light.

The front passenger-side airbag is either enabled or disabled depending on the classification of the passenger in the front passenger seat.

Volvo follows NHTSA's recommendations and recommends that ALL children up to and including 12 years of age sit in the rear seat and are restrained in a suitable manner appropriate to their height and weight. This is strongly recommended for children in rear-facing child seats.

Classification of passengers in front pas- senger seat	OCS indicator light status	Passenger's side front airbag status
The passenger is classified as an adult.	OCS indicator light is not lit.	Enabled
The passenger is classified as a small child in a front-facing child seat.	The OCS indicator light is lit or not lit depending on several pa- rameters that determine the most suitable status.	Enabled or disabled depending on several parameters that determine the most suitable status.
The passenger is classified as a small child in a rear-facing child seat.	OCS indicator light is lit.	Disabled
The passenger seat is empty.	OCS indicator light is lit.	Disabled

Occupant Classification System function

OCS works in combination with sensors in the front passenger seat. The sensors are intended to detect the presence, and classification of, an occupant sitting correctly and determine whether the front passenger airbag should be enabled (able to be deployed) or disabled (cannot be deployed).

The OCS uses an indicator light with the text **PASSENGER AIRBAG OFF**, which will illuminate and stay on to remind you that the passenger's side front airbag is disabled. The **PASSENGER AIRBAG OFF** indicator light is located in the ceiling console near the bracket for the rearview mirror.

Always pay attention that the status of the indicator light shows the correct classification both before and while driving when the front passenger seat is occupied.

(i) Note

When the ignition is switched on, the OCS indicator light will illuminate for several seconds while the system performs a self-diagnostic test. The indicator light will then go out or remain illuminated, depending on the classification of the passenger in the front passenger seat.

If a malfunction is detected in the system, the OCS indicator light will remain illuminated and the SRS warning symbol will be shown in the instrument panel along with a text message.

/ Warning

If a fault in the system is detected and indicated as described, be aware that the passenger's side front airbag will not deploy in the event of a collision. If this occurs, have the airbag system and Occupant Classification System checked by a workshop as soon as possible. Volvo recommends contacting an authorized Volvo workshop.

Classification of adult

To help ensure accurate classification when a person of adult size is sitting in the front passenger seat, the passenger must:

- be wearing their seat belt
- sit normally in the seat, in the center of the seat cushion
- sit upright in the seat with their shoulders against the backrest
- have their legs comfortably extended with their feet on the floor.

Correct seating position.

Example of incorrect seating position - the passenger must not have slid forward on the seat cushion.

Example of incorrect seating position - the passenger must not fold the backrest to a lying position.

Remember the following when an adult sits in the front passenger seat:

- The passenger must never get up from the seat cushion using the armrest in the door or center console, by pushing their feet against the floor or by pushing against the backrest.
- The passenger must never sit on the side of the seat cushion, slide forward on the seat cushion or fold the backrest to a lying position.
- The passenger must never wear wet or thick clothing, e.g. ski wear or padded garments.
- Never place any objects between the passenger and the seat cushion, e.g. pillows, heating blankets or ordinary blankets, seat liners or mats.
- Never place a radio transmitter (e.g. hunting radio or walkie-talkie) or device that is being charged (e.g. cellular phone, tablet or computer) on or under the seat cushion. Never let anyone sitting on the passenger seat use a radio transmitter or device that is being charged.

/! Warning

Failure to follow the above instructions could adversely affect the Occupant Classification System functions and result in death or serious injury.

If a person of adult size is sitting in the front passenger's seat, but the OCS indicator lamp is on, it is possible that the person isn't sitting properly in the seat.

If this occurs, turn off the vehicle and ask the person to follow the above instructions for accurate classification. Restart the vehicle and have the person remain in this position for about two minutes. This will allow the system to detect that person and enable the passenger's frontal airbag.

If the OCS indicator lamp remains on even after this, the person should be advised to ride in the rear seat.

This may indicate restrictions in the OCS classification ability, e.g. that the person is too light to be classified as an adult. It does not need to indicate an OCS error.

Classification of child

Volvo follows NHTSA's recommendations and recommends that ALL children up to and including 12 years of age sit in the rear seat. This is strongly recommended for children in rear-facing child seats.

If a child in a child restraint is placed in the front passenger seat, the child restraint must be installed according to the manufacturer's instructions to help ensure accurate classification.

Remember the following if a child in a child seat sits in the front passenger seat:

- Never place any items or accessories on the passenger seat, between the child seat and the seat cushion or near to the seat cushion.
- Never place a radio transmitter (e.g. hunting radio or walkie-talkie) or device that is being charged (e.g. cellular phone, tablet or computer) on the seat cushion. Never let anyone sitting on the passenger seat use a radio transmitter or device that is being charged.
- Never place wet clothing or fluids on the passenger seat.
- Always correctly position the child seat so that the entire lower section of the child seat rests against the seat cushion.
- Always place a front-facing child seat as far back as possible against the seat back.

/ Warning

Failure to follow the above instructions could adversely affect the Occupant Classification System functions and result in death or serious injury.

Modifications

If you are considering modifying your vehicle in any way to accommodate a disability, for example by altering or adapting the driver's or front passenger's seat(s) and/or airbag systems, please contact Volvo at:

In the United States

Volvo Car USA, LLC

Customer Care Center

1800 Volvo Place

Mahwah, New Jersey 07430

1-800-458-1552

In Canada

Volvo Car Canada Ltd.

Customer Care Centre

9130 Leslie Street, Suite 101

Richmond Hill, Ontario L4B 0B9

1-800-663-8255
/ Warning

Never attempt to open, remove or repair any components in the OCS system. Volvo recommends contacting an authorized Volvo workshop. Incorrectly performed repairs to the OCS system could impair function and lead to serious injury.

The front passenger's seat should not be modified in any way. This could affect the function of the OCS system.

3.4. Safety mode

3.4.1. Safety mode

Safety mode is a feature that is triggered after a collision if there is potential damage to an important function in the vehicle, such as the fuel lines, sensors for one of the safety systems, the brake system, etc.

If the vehicle has been involved in a collision, the text **Safety mode See Owner's manual** may appear in the instrument panel along with the warning symbol if the panel is undamaged and the vehicle's electrical system is intact. The message indicates that one or more of the vehicle's functions may be reduced.

/ Warning

Never attempt to restart the vehicle if you smell fuel fumes when the message **Safety mode See Owner's manual** is displayed in the instrument panel. Leave the vehicle immediately.

If safety mode has been set, it may be possible to reset the system in order to start and move the vehicle a short distance, for example, if it is blocking traffic.

/!\ Warning

Never attempt to perform repairs or reset electrical components on your own after the vehicle has been in safety mode. This could result in injury or prevent the vehicle from functioning properly. Volvo recommends having the vehicle inspected and reset to normal operating status by an authorized Volvo workshop after **Safety mode See Owner's manual** has been displayed.

/! Warning

When the vehicle is in safety mode, it should not be towed behind another vehicle. It should be towed from the site on a tow truck. Volvo recommends towing the vehicle directly to an authorized Volvo workshop.

3.4.2. Starting and moving the vehicle when it is in safety mode

If safety mode has been set, it may be possible to reset the system in order to start and move the vehicle a short distance, for example, if it is blocking traffic.

Resetting and starting the vehicle when it is in safety mode

1 Check the vehicle for damage, particularly for fuel leakage. Make sure you do not detect any gasoline fumes.

If the damage to the vehicle is minor and there is no fuel leakage/fumes, you may attempt to start the engine.

/ Warning

Never attempt to restart the vehicle if you smell fuel fumes when the message **Safety mode See Owner's manual** is displayed in the instrument panel. Leave the vehicle immediately.

- **2** Switch off the ignition.
- 3 Then try to start the vehicle.
- The vehicle's electrical system will perform a system check and then attempt to reset to normal operating mode. The message Vehicle start System check, wait will be displayed on the instrument panel during the check. This may take up to a minute.
- 4 When Vehicle start System check, wait is no longer displayed in the instrument panel, try again to start the vehicle.

() Important

If the message **Safety mode See Owner's manual** is still displayed, the vehicle should not be driven or towed behind another vehicle. If the vehicle needs to be moved, it must be towed on a tow truck. Even if no damage is apparent, there may be hidden damage that could make the vehicle impossible to control.

Moving the vehicle when it is in safety mode

- 1 If the message Normal mode The car is now in normal mode is displayed after attempting to start the engine, the vehicle may be moved carefully from its present position if, for example, it is blocking traffic.
- 2 Do not move the vehicle farther than absolutely necessary.

/!\ Warning

When the vehicle is in safety mode, it should not be towed behind another vehicle. It should be towed from the site on a tow truck. Volvo recommends towing the vehicle directly to an authorized Volvo workshop.

3.5. Safety

The vehicle is equipped with a number of safety systems that work together to help protect the vehicle's driver and passengers in the event of an accident.

The vehicle is equipped with a number of sensors that may react in the event of an accident and activate different safety systems, such as the airbag system and seat belt tensioners. Depending on the specific conditions of the accident, e.g. collisions at certain angles, overturning or swerving, the systems react differently to help provide good protection.

There are also mechanical safety systems such as the Whiplash Protection System. The vehicle is also built so that a large part of the force of a collision is distributed to the vehicle's members, pillars, floor, roof and other parts of the body.

After an accident, the vehicle's safety mode may be activated if any important function in the vehicle has been damaged.

Warning symbol in the instrument panel

The warning symbol in the instrument panel illuminates when the vehicle's electrical system is in ignition mode II. The symbol will go out after approx. 6 seconds if no faults are detected in the vehicle's safety systems.

Warning

If the warning symbol remains illuminated or switches on while driving and the message SRS airbag Service urgent Drive to workshop is displayed in the instrument panel, this indicates that something in the safety system is not functioning properly. Volvo recommends contacting an authorized Volvo workshop for repairs as soon as possible.

/!\ Warning

Never attempt to alter or repair any of the vehicle's safety systems yourself. Incorrectly performed repairs to any system could impair function and lead to serious injury. Volvo recommends contacting an authorized Volvo workshop.

If this dedicated warning symbol is not functioning, the general warning symbol will illuminate instead and the same message will be displayed in the instrument panel.

3.6. Recall information

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note.

Volvo customers in the US

On our website, click on the three lines next to "Our Cars" up at the right of the screen, then click "Help & Support" and then "Recall information". Enter the vehicle's Vehicle Identification Number (VIN) (found at the bottom of the windshield). If your vehicle has any open Recalls, they will be displayed on this page.

You can also enter the Vehicle Identification Number in the search field on the National Highway Traffic Safety Administration's (NHTSA) website at: www.nhtsa.gov/].

Volvo customers in Canada

For any questions regarding open recalls for your vehicle, please contact your authorized Volvo retailer. If your retailer is unable to answer your questions, please contact Volvo Customer Relations at 800-663-8255, Monday through Friday, 8:30 A.M. to 5:00 P.M. EST or volvocars.com/ca [https://volvocars.com/ca]. You may also write us at:

Volvo Car Canada Ltd.

Customer Care Centre

9130 Leslie Street, Suite 101

Richmond Hill, Ontario L4B 0B9

You can also search for manufacturer, model and model year on Transport Canada's website:

www.tc.gc.ca

3.7. Occupant safety

Safety is Volvo's cornerstone.

Volvo's concern for safety

Our concern for safety dates back to 1927 when the first Volvo rolled off the production line. Three-point seat belts (a Volvo invention), safety cages, and energy-absorbing impact zones were designed into Volvo vehicles long before it was fashionable or required by government regulation.

We will not compromise our commitment to safety. We continue to seek out new safety features and to refine those already in our vehicles. You can help. We would appreciate hearing your suggestions about improving automobile safety. We also want to know if you ever have a safety concern with your vehicle. Call us in the U.S. at: 1-800-458-1552 or in Canada at: 1-800-663-8255.

Occupant safety reminders

How safely you drive doesn't depend on how old you are but rather on:

- How well you see.
- Your ability to concentrate.
- How quickly you make decisions under stress to avoid an accident.

The following suggestions are intended to help you cope with the ever changing traffic environment.

- Never drink and drive.
- If you are taking any medication, consult your physician about its potential effects on your driving abilities.
- Take a driver-retraining course.
- Have your eyes checked regularly.
- Keep your windshield and headlights clean.
- Replace wiper blades when they start to leave streaks.
- Take into account the traffic, road, and weather conditions, particularly with regard to stopping distance.
- Never text while driving.
- Refrain from using or minimize the use of a cell phone while driving.

3.8. Safety during pregnancy

It is important that seat belts are worn correctly during pregnancy and that pregnant drivers adjust their seating position accordingly.

Seat belt

The seat belt should fit closely against the shoulder, with the diagonal section between the breasts and to the side of the stomach.

The lap section of the seat belt should lie flat over the thighs and as far as possible under the stomach. Never let it ride upward. Remove unnecessary slack and make sure the seat belt fits as close as possible to the body. Make sure there are no twists in the seat belt.

Seating position

As pregnancy progresses, pregnant drivers should adjust the seat and steering wheel to a position that allows them to retain full control of the vehicle (which means they should be able to easily reach the steering wheel and foot pedals). Try to maintain as much distance as possible between the stomach and the steering wheel.

3.9. Reporting safety defects

The following information will help you report any perceived safety-related defects in your vehicle.

Reporting safety defects in the U.S.

If you believe that your vehicle has a defect which could cause a crash or could cause injury or death, you should immediately inform the National Highway Traffic Safety Administration (NHTSA) in addition to notifying Volvo Car USA, LLC. If NHTSA receives similar complaints, it may open an investigation, and if it finds that a safety defect exists in a group of vehicles, it may order a recall and remedy campaign. However, NHTSA cannot become involved in individual problems between you, your retailer, or Volvo Car USA, LLC. To contact NHTSA, you may either call the Auto Safety Hotline tollfree at

1-888-327-4236

(TTY: 1-800-424-9153) or write to: NHTSA Headquarters, 1200 New Jersey Avenue SE., West Building, Washington D.C. 20590.

You can also obtain other information about motor vehicle safety from <u>http://www.safercar.gov</u>, where you can also enter your vehicle's VIN (Vehicle Identification Number) to see if it has any open recalls.

Volvo strongly recommends that if your vehicle is covered under a service campaign, safety or emission recall or similar action, it should be completed as soon as possible. Please check with your local retailer or Volvo Car USA, LLC if your vehicle is covered under these conditions.

NHTSA can be reached at:

Internet:

http://www.nhtsa.gov

Telephone:

1-888-327-4236

Reporting safety defects in Canada

If you believe your vehicle has a defect that could cause a crash or could cause injury or death, you should immediately inform Transport Canada in addition to notifying Volvo Car Canada Ltd.

Transport Canada can be contacted at:

1-866-995-9737

Teletypewriter (TTY): 1-888-675-6863

Fax: 613-954-4731

Mailing Address: Transport Canada - 330 Sparks St, Ottawa, (Ontario) K1A 0N5

www.tc.gc.ca

3.10. Whiplash Protection System

The Whiplash Protection System (WHIPS) is designed to help reduce the risk of whiplash-type injuries. The system consists of energy absorbing backrests and seat cushions as well as specially designed head restraints in the front seats.

WHIPS is activated in the event of a rear-end collision and adapted to the angle and speed of the collision and to the characteristics of the colliding vehicle.

When WHIPS is activated, the front seat backrests move rearward and the seat cushions move downward to change the seating positions of the driver and front seat passenger. This movement helps absorb some of the forces that could result in whiplash.

Warning

WHIPS is a supplement to the seat belt. Always wear your seat belt.

Warning

Do not attempt to alter or repair the seat or WHIPS on your own. Volvo recommends contacting an authorized Volvo workshop.

If the front seats have been subjected to severe stress, e.g. in a collision, the seats must be replaced. Even if the seats appear undamaged, some of their protective properties may have been lost.

Do not place any objects on the floor behind or under the front seats or on the rear seat that could prevent WHIPS from functioning correctly.

/!\ Warning

Do not squeeze box-like cargo between the rear seat cushion and the front seat backrest.

If the rear seat backrests are folded down, cargo must be secured to prevent it from sliding forward against the front seat backrests in the event of a collision.

✓! Warning

If a rear seat backrest is folded down or if a rear-facing child restraint is being used in the rear seat, the seat in front must be moved forward so that it does not come into contact with the backrest or child restraint.

Seating position

For WHIPS to provide good protection, the driver and passenger must be seated correctly and the system's function must not be impeded in any way.

Set the front seat to the correct seating position before starting to drive.

The driver and the front seat passenger should sit in the center of the seat with their heads as close as possible to the head restraints.

4.1. Instrument panel

4.1.1. Gauges and indicators in the instrument panel

4.1.1.1. Fuel gauge

The fuel gauge in the instrument panel shows the fuel level in the tank.

The illustration is generic - details may vary according to vehicle model.

The beige area in the fuel gauge indicates the amount of fuel left in the tank.

When the fuel level is low, the fuel pump symbol will illuminate with an amber-colored light. The trip computer also indicates the approximate distance that can be driven on the fuel remaining in the tank.

4.1.1.2. Hybrid battery gauge

The hybrid battery gauge shows how much current is left in the hybrid battery.

The current in the hybrid battery is used to power the electric motor, but can also be used to heat or cool the vehicle. The trip computer calculates an approximate driving distance with the remaining current in the hybrid battery.

Symbols in the hybrid battery gauge

The **f** symbol in the hybrid battery gauge indicates that the Hold function is activated. The **f** symbol indicates that the Charge function is activated.

4.1.1.3. Hybrid gauge

In Hybrid and Pure drive modes, the instrument panel will display a hybrid gauge, which can help the driver achieve optimal driving economy.

The hybrid gauge shows the ratio between the electric motor's current power consumption and the remaining available power. This information is shown in various ways.

Symbols in the hybrid gauge

Indicates the current available power from the electric motor. A solid symbol indicates that the electric motor is being used.

A hollow symbol indicates that the electric motor is not being used.

Indicates the power level when the internal combustion engine starts. A solid symbol indicates that the internal combustion engine is being used.

Indicates the power level when the internal combustion engine will start. A hollow symbol indicates that the internal combustion engine is not being used.

Indicates that the hybrid battery is being charged e.g. by lightly pressing the brake pedal.

Driver-requested power

The hybrid gauge displays the amount of power requested (utilized) by the driver through pressure on the accelerator pedal. The higher the reading on the scale, the more power utilized in the current gear. The mark between the lightning symbol and the drop symbol indicates the point at which the combustion engine will start.

The vehicle has been started, but is stationary and no power is being requested.

The electric motor cannot supply the requested power and the internal combustion engine will start.

The vehicle is generating current to recharge the battery, e.g. during light braking or engine braking on a downslope.

4.1.1.4. Ambient temperature sensor

The ambient temperature is shown in the instrument panel.

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note. 120 / 1010

The sensor detects the temperature outside the vehicle.

If the vehicle has been stationary, the sensor reading may be higher than the actual temperature.

When the ambient temperature is between -5 °C and +2 °C (23 °F and 36 °F), a snowflake symbol will illuminate to alert the driver of the risk of slippery conditions.

Change the measurement standard for the temperature sensor etc. via system settings in the center display's Top view.

4.1.2. Trip computer

4.1.2.1. Trip computer

The vehicle's trip computer registers data while driving such as mileage, fuel consumption and average speed.

To help promote fuel-efficient driving, data is recorded on both current and average fuel consumption. Data from the trip computer can be displayed in the instrument panel.

Example of trip computer information in the instrument panel. The illustration is generic - details may vary according to vehicle model.

The trip computer includes the following gauges:

- Trip odometer
- Odometer
- Current fuel consumption
- Distance to empty tank
- Distance to discharged battery
- Tourist alternative speedometer

Unit standards for distance, speed, etc. can be changed via system settings in the center display.

Trip odometer

There are two trip odometers: TM and TA.

TM can be reset manually and TA is reset automatically if the vehicle is not used for four hours.

During a drive, the trip odometer registers data on:

- Mileage
- Driving time
- Average speed
- Average fuel consumption

The readings since the trip odometer's last reset are displayed.

Odometer

The odometer records the vehicle's total mileage. This reading cannot be reset.

Current fuel consumption

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note.

This gauge shows the vehicle's fuel consumption at that moment. The reading is updated about once a second.

Distance to empty tank

The trip computer calculates the distance that can be driven on the fuel remaining in the tank.

This calculation is based on average fuel consumption during the last 30 km (20 miles) and the amount of fuel remaining in the tank.

When the gauge displays "----", there is not enough fuel remaining to calculate the remaining mileage. Refuel as soon as possible.

The information will change based on your driving style.

An economical driving style will generally increase how far you can drive on a certain amount of fuel.

Distance to discharged battery

This gauge shows the approximate distance that can be driven with the remaining current in the hybrid battery.

This calculation is based on average consumption with a normally loaded vehicle in normal driving conditions, and takes into account whether the air conditioning is on or off. Changing drive modes from **Hybrid** to **Pure** may increase the calculated distance because **Pure** mode has reduced climate control settings (ECO Climate).

When the gauge displays "----", there is little charge remaining in the battery and electric motor range cannot be reliably calculated.

The information will change based on your driving style.

An economical driving style will generally increase how far you can drive on a certain amount of fuel.

Starting values for fully charged hybrid battery

Because it is difficult to predict driving style and other factors that affect the range of electric motors, Volvo uses a starting value when the vehicle is fully charged. This starting value provides an "up to" amount instead of a prediction on the range of the electric current in the motor. The difference in starting value between **Hybrid** and **Pure** is because the vehicle is permitted to use more current from the hybrid battery in **Pure** mode, and because the vehicle switches to ECO Climate.

Mileage when using electric motor

To achieve the longest possible mileage when using the electric motor, the driver of an electric vehicle also needs to think about conserving electricity. The more electricity consumers (stereo, heated windows/mirrors/seats, very cold air from climate control

(i) Note

In addition to high electrical consumption in the passenger compartment, rapid acceleration, sudden braking, high speeds, heavy loads, low ambient temperatures and driving up hills can reduce possible driving distance.

Alternative speedometer with tourist mode

The alternative speedometer makes it easier to drive in countries where speed limit signs are shown in a different measurement unit than the one usually shown in the vehicle.

When used, the digital speed is displayed in the opposite unit to that shown in the analog speedometer. If mph is used in the analog speedometer, the equivalent speed in km/h will be shown in the digital speedometer.

Alternative speedometer without tourist mode

When the driver changes unit to display the speedometer in e.g. km/h a smaller speedometer is displayed digitally in mph above the standard speedometer and vice versa.

4.1.2.2. Displaying trip data in the instrument panel

Data recorded and calculated by the trip computer can be displayed on the instrument panel.

This data is stored in a trip computer app. You can choose which information the instrument panel will display in the app menu.

Open and navigate in the app menu^[1] using the right-hand steering wheel keypad.

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note.

1 Open the app menu in the instrument panel by pressing (1).

(The App menu cannot be opened while there is an unacknowledged message in the instrument panel. The message must be acknowledged by pressing the O button (4) before the App menu can be opened).

- **2** Navigate to the trip computer app by moving left or right using (2).
- > The top four menu rows show measured values for trip odometer TM. The next four menu rows show measured values for trip odometer TA. Scroll up or down in the list using (3).
- **3** Scroll down to the option buttons to choose which information to show in the instrument panel:
 - Odometer
 - Distance to empty tank
 - Distance to discharged battery
 - Tourist (alternative speedometer)
 - Mileage for trip odometer TM, TA or no display of mileage
 - Current fuel consumption, average fuel consumption for TM or TA, or no display of fuel consumption

Select or clear a selection using the \odot button (4). The change will apply immediately.

^[1] The illustration is generic - details may vary according to vehicle model.

4.1.2.3. Resetting the trip odometer

Resetting the trip odometer using the left-side steering wheel lever.

1 Reset all information in trip odometer TM (i.e. mileage, average fuel consumption, average speed and driving time) by pressing and holding the RESET button on the left-hand steering wheel lever.

Pressing the RESET button only resets the distance driven.

125 / 1010

The TA trip odometer can not be manually reset. It resets automatically if the vehicle is not used for four hours or more.

4.1.2.4. Displaying trip statistics in the center display

Trip computer statistics can be displayed graphically in the center display, providing an overview that facilitates more fuel-efficient driving.

Open the Driver performance app in the App view to display trip statistics.

Each bar in the graph represents a driving distance of 1 kilometers, 10 kilometers or 100 kilometers (or miles). The bars are added from the right as you drive. The bar at the far right shows the data for the current trip.

Average fuel consumption and total driving time are calculated from the most recent reset of the trip statistics.

Fuel and electricity consumption are shown in separate graphs. The electricity consumption shows "net" consumption, i.e. consumed current minus regenerated current generated by braking.

Trip computer statistics^[1].

^[1] The illustration is generic - details may vary according to vehicle model.

4.1.2.5. Trip statistics settings

Trip statistics settings can be reset or adjusted.

Open the Driver performance app in the App view to display trip statistics. 1

2 Tap Preferences to

- change the graph scale. Select 1, 10 or 100 km/miles for the bar.
- reset data after each trip. Performed when the vehicle remains stationary for more than 4 hours.
- reset data for current trip.

Trip statistics, calculated average consumption, and total driving time are always reset simultaneously.

Unit standards for distance, speed, etc. can be changed via system settings in the center display.

4.1.3. Instrument panel

The instrument panel displays information related to the vehicle and driving.

The instrument panel contains gauges, indicators and monitoring and warning symbols. What is shown in the instrument panel varies depending on the equipment, settings and functions currently active.

The instrument panel is activated as soon as a door is opened, i.e. in ignition mode 0. The panel will power down after a short period of time if it is not used. To reactivate it, do one of the following:

- Activate ignition mode I.
- Open one of the doors.

/ Warning

If the instrument panel turns off, does not activate when the ignition is switched on, or part/all of the panel cannot be read, do not drive the vehicle. Consult a workshop immediately. Volvo recommends an authorized Volvo workshop.

/ Warning

If the instrument panel is not functioning properly, information about brakes, airbags or other safety-related systems may not be displayed. The driver will then not be able to check the status of the vehicle systems or receive relevant warnings and information.

The illustration is generic - details may vary according to vehicle model.

Location in the instrument panel:		
Left side	In the center	Right side
Speedometer	Indicator and warning symbols	Tachometer/Hybrid gauge ^[1]
Trip odometer	Ambient temperature sensor	Gear indicator
Odometer ^[2]	Clock	Drive Mode
Cruise control/speed limiter information	Message (also graphics in some cases)	Fuel gauge
Road sign information *	Door and seat belt status	Hybrid battery gauge
-	Hybrid battery's charge level	Distance to empty tank
-	Media player	Distance to discharged battery
-	Navigation system map*	Current fuel consumption
-	Phone	App menu (activated using steering wheel keypad)
-	Voice control	-

Dynamic symbol

Dynamic symbol in basic mode.

In the center of the instrument panel is a dynamic symbol that changes appearance according to the type of message displayed. The severity of the control or warning symbol is indicated by a red or amber-colored marking around the symbol.

Example with indicator symbol.

An animation may be used to change the symbol into a graphic image to depict the location of a problem or to clarify information.

The symbol in the instrument panel changes shape.

- ^[1] Depends on selected drive mode.
- ^[2] Total distance.
- * Option/accessory.

4.1.4. Instrument panel settings

Display settings for the instrument panel can be set in the instrument panel's App menu and in the center display's Settings menu.

Settings via instrument panel's app menu

The illustration is generic - details may vary according to vehicle model.

The app menu will open and can be controlled using the right-side steering wheel keypad.

The app menu can be used to set what information will be displayed in the instrument panel

- trip computer
- media player
- phone
- navigation system *.

Settings via center display

Selecting type of information

- Tap Settings in the center display's Top view. 1
- Tap My Car \rightarrow Displays \rightarrow Driver Display Information. 2
- Select a background: 3
 - Show no information in the background .
 - Show information for current playing media
 - Show navigation even if no route is set

Select theme

- Tap Settings in the center display's Top view. 1
- Tap My Car \rightarrow Displays \rightarrow Display Themes. 2

- 3 Select a theme (appearance) for the instrument panel:
 - Glass
 - Minimalistic
 - Performance
 - Chrome Rings

Select language

- 1 Tap Settings in the center display's Top view.
- 2 Tap System \rightarrow System Languages and Units \rightarrow System Language to select language.
- > A change made here will affect the language in all displays.

The settings are personal and saved automatically in the active driver profile.

* Option/accessory.

4.1.5. License agreement for instrument panel

A license is an agreement on the right to conduct a certain activity or the right to use someone else's right according to terms and conditions specified in the agreement. The following text is Volvo's agreement with the manufacturer or developer.

Freetype Project License

3rd Party Software Disclaimers and License Agreements Confidential ID 06-00004-004 39 / 75 Revision 06.00A, 2015-06-09 2006-Jan-27 Copyright 1996-2002, 2006 by David Turner, Robert Wilhelm, and Werner Lemberg.

Introduction

The FreeType Project is distributed in several archive packages; some of them may contain, in addition to the FreeType font engine, various tools and contributions which rely on, or relate to, the FreeType Project. This license applies to all files found in such packages, and which do not fall under their own explicit license. The license affects thus the FreeType font engine, the test programs, documentation and makefiles, at the very least. This license was inspired by the BSD, Artistic, and IJG (Independent JPEG Group) licenses, which all encourage inclusion and use of free software in commercial and freeware products alike. As a consequence, its main points are that: o We don't promise that this software works. However, we will be interested in any kind of bug reports. (`as is' distribution) o You can use this software for whatever you want, in parts or full form, without having to pay us. (`royalty-free' usage) o You may not pretend that you wrote this software. If you use it, or only parts of it, in a program, you must acknowledge somewhere in your documentation that you have used the FreeType code. (`credits') We specifically permit and encourage the inclusion of this software, with or without modifications, in commercial products. We disclaim all warranties covering The FreeType Project and assume no liability related to The FreeType Project. Finally, many people asked us for a preferred form for a credit/disclaimer to use in compliance with this license. We thus encourage you to use the following text:

"Portions of this software are copyright © 2013 The FreeType Project (www.freetype.org). All rights reserved."

Legal Terms

0. Definitions – Throughout this license, the terms `package', `FreeType Project', and `FreeType archive' refer to the set of files originally distributed by the authors (David Turner, Robert Wilhelm, and Werner Lemberg) as the `FreeType Project', be they named as alpha, beta or final release. `You' refers to the licensee, or person using the project, where `using' is a generic term including compiling the project's source code as well as linking it to form a `program' or `executable'. This program is referred to as `a program using the FreeType engine'. This license applies to all files distributed in the original FreeType Project, including all source code, binaries and documentation, unless otherwise stated in the file in its original, unmodified form as distributed in the original archive. If you are unsure whether or not a particular file is covered by this license, you must contact us to verify this. The FreeType Project is copyright (C) 1996-2000 by David Turner, Robert Wilhelm, and Werner Lemberg. All rights reserved except as specified below.

1. No Warranty – THE FREETYPE PROJECT IS PROVIDED `AS IS' WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESS OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. IN NO EVENT WILL ANY OF THE AUTHORS OR COPYRIGHT HOLDERS BE LIABLE FOR ANY DAMAGES CAUSED BY THE USE OR THE INABILITY TO USE, OF THE FREETYPE PROJECT. '

2. Redistribution – This license grants a worldwide, royalty-free, perpetual and irrevocable right and license to use, execute, perform, compile, display, copy, create derivative works of, distribute and sublicense the FreeType Project (in both source and object code forms) and derivative works thereof for any purpose; and to authorize others to exercise some or all of the rights granted herein, subject to the following conditions: o Redistribution of source code must retain this license file (`FTL.TXT') unaltered; any additions, deletions or changes to the original files must be clearly indicated in accompanying documentation. The copyright notices of the unaltered, original files must be preserved in all copies of source files. o Redistribution in binary form must provide a disclaimer that states that the software is based in part of the work of the FreeType Team, in the distribution documentation. We also encourage you to put an URL to the FreeType web page in your documentation, though this isn't mandatory. These conditions apply to any software derived from or based on the FreeType Project, not just the unmodified files. If you use our work, you must acknowledge us. However, no fee need be paid to us.

3. Advertising – Neither the FreeType authors and contributors nor you shall use the name of the other for commercial, advertising, or promotional purposes without specific prior written permission. We suggest, but do not require, that you use one or more of the following phrases to refer to this software in your documentation or advertising materials: `FreeType Project', `FreeType Engine', `FreeType library', or `FreeType Distribution'. As you have not signed this license, you are not required to accept it. However, as the FreeType Project is copyrighted material, only this license, or another one contracted with the authors, grants you the right to use, distribute, and modify it. Therefore, by using, distributing, or modifying the FreeType Project, you indicate that you understand and accept all the terms of this license.

4. Contacts – There are two mailing lists related to FreeType: o freetype@nongnu.org. Discusses general use and applications of FreeType, as well as future and wanted additions to the library and distribution. If you are looking for support, start in this list if you haven't found anything to help you in the documentation. o freetype-devel@nongnu.org. Discusses bugs, as well as engine internals, design issues, specific licenses, porting, etc. Our home page can be found at http://www.freetype.org

4.1.6. App menu in instrument panel

The App menu in the instrument panel provides quick access to commonly used functions for certain apps.

The illustration is generic.

The App menu in the instrument panel can be used instead of the center display and is then controlled using the right-side steering wheel keypad. The app menu makes it easier to switch between different apps or functions within the apps without having to let go of the steering wheel.

App menu functions

Different apps provide access to different types of functions. The following apps and their functions can be controlled from the App menu:

Арр	Functions
Trip computer	Select a trip odometer, change instrument panel display settings, etc.
Media player	Select active source for media player.
Phone	Call a contact from the call list.
Navigation	Guide to destination, etc.

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note.

4.1.7. Handling the App menu in the instrument panel

The App menu in the instrument panel is controlled using the right-side steering wheel keypad.

App menu and right-side steering wheel keypad. The illustration is generic.

- 1 Open/close
- 2 Left/right
- 3 Up/down
- 4 Confirm

Opening and closing the app menu

- 1 Tap open/close (1).
- > The App men opens/closes.

(i) Note

The App menu cannot be opened while there is an unacknowledged message in the instrument panel. The message must be acknowledged before the App menu can be opened.

The App menu turns off automatically after a period of inactivity or after certain selections are made.

Navigating and making selections in the App menu

- 1 Navigate between apps by tapping left or right (2).
- > Functions for the previous/next app will be shown in the App menu.

- **2** Scroll through the functions for the selected app using the up or down arrows (3).
- **3** Confirm or make a selection for the function by pressing confirm (4).
- > The function will be activated and, for some selections, the App menu will then close.

The next time the App menu is opened, the functions for the most recently selected app will be displayed automatically.

4.1.8. Indicator and warning symbols

Indicator and warning symbols alert the driver that a function is active, that a symbol is working, or that an error or serious fault has occurred.

Red symbols

	WARNING The red warning symbol illuminates to indicate that a fault has been detected that could affect safety or driveability. An explanatory message will be simultane- ously displayed in the instrument panel. The warning symbol may also illuminate in combination with other symbols.
Å	Seat belt reminder Lights up or flashes when a someone in the vehicle has not fastened their seat belt.
*	Airbags A fault has been detected in one of the vehicle's safety systems. Read the message in the instrument panel and contact a workshop. Volvo recommends contacting an authorized Volvo workshop.
((!)) [1]	Fault in brake system A fault has occurred in the brake system. Read the message in the instrument panel and contact a workshop. Volvo recommends contacting an authorized Volvo workshop.
BRAKE	
(P) [1]	Parking brake Steady glow: the parking brake is activated. Flashing: a fault has occurred in the parking brake. Read the message in the instrument panel.
PARK [2]	
<u>e</u> t	Fault in electrical system A fault has occurred in the electrical system. Read the message in the instrument panel and contact a workshop. Volvo recommends contacting an authorized Volvo workshop.
	High engine temperature The engine's temperature is too high. Read the message in the instrument panel.
	Collision risk City Safety warns the driver if there is a risk of a collision with another vehicle, pedestrian, cyclist or large animal.

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note.

Low oil pressure

The engine's oil pressure is too low. Switch off the engine immediately and check the engine oil level. Add oil if necessary.

If this symbol lights up and the oil level is normal, read the message in the instrument panel and contact a workshop. Volvo recommends contacting an authorized Volvo workshop.

Amber symbols

1	Information A problem has occurred in one of the vehicle's systems. Read the message in the instrument panel. The information symbol may also illuminate in combination with other symbols.
(!) [1]	Fault in brake system A fault has occurred in the brake system. Read the message in the instrument panel.
BRAKE	
(ABS) [1]	Fault in ABS system The system is not functioning properly. The vehicle's regular brakes will still work, but without the ABS function.
ABS [2]	
ᢔ	Emission control system Fault in emission control system. Have the vehicle checked by a workshop. Volvo recommends contacting an authorized Volvo workshop.
() ‡	Rear fog light Rear fog light on.
<u>(!</u>)	Tire pressure system Tire pressure low. If there is a fault in the tire pressure system, the symbol will first flash for approximately 1 minute and then glow steadily. This may occur if the system cannot detect or alert the driver of low tire pressure as intended.
	Fault in headlight system A fault has occurred in the headlight system. Read the message in the instrument panel.
/\\	Lane Keeping Aid Lane Keeping Aid is alerting/intervening.
	Reduced performance Temporary fault in driveline. Read the message in the instrument panel.
	Stability system Steady glow: a fault has occurred in the system. Flashing: the system is working.
OFF	Stability system, Sport mode Sport mode is activated.

Blue symbols

Active high beam Active high beam is activated and on.
High beams High beams on.

Green symbols

	Auto-hold brake The function is activated and the brakes or the parking brake are being used.
钓	Front fog light Front fog light on.
ED OE	Parking lights Parking lights on.
	Left/right turn signals Turn signal in use.

White/gray symbols

	Active high beam Active high beam is activated but not on.
<u> </u>	Preconditioning Engine and passenger compartment heater/air conditioning is preconditioning the vehicle.
/:\	Lane Keeping Aid White symbol: Lane Keeping Aid is on and lane marker lines are detected. Gray symbol: Lane Keeping Aid is on but no lane marker lines are detected.
T >	Rain sensor The rain sensor is activated.

^[1] Canadian models.

^[2] US models.

4.1.9. Messages in the instrument panel

The instrument panel shows messages in certain circumstances to inform or assist the driver.

Example of message in the instrument panel. The illustration is generic - details may vary according to vehicle model.

High-priority messages for the driver are displayed in the instrument panel.

The messages may appear in different parts of the instrument panel depending on what other information is currently being displayed. The message will disappear from the instrument panel after a short period of time or after it has been acknowledged or any required action has been taken. Messages that need to be saved are stored in the Car Status app, which can be opened from the App view in the center display.

The message may be shown along with graphics, symbols or buttons to e.g. acknowledge the message or accept a request.

Service messages

The following table lists a selection of important service messages and what they mean.

Message	Meaning
Stop safely ^[1]	Stop and switch off the engine. Serious risk of damage - contact a workshop $^{\left[2\right]}$.
Turn off engine ^[1]	Stop and switch off the engine. Serious risk of damage - contact a workshop $^{\left[2\right]}$.
Service urgent Drive to workshop ^[1]	Contact a workshop ^[2] to have the vehicle inspected immediately.
Service required ^[1]	Contact a workshop $^{[2]}$ to have the vehicle inspected as soon as possible.
Regular maintenance Book time for maintenance	Time for service - contact a workshop $\ensuremath{^{[2]}}$. Shown before the next service date.
Regular maintenance Time for maintenance	Time for service - contact a workshop $\ensuremath{^{[2]}}$. Shown on the next service date.
Regular maintenance Maintenance overdue	Time for service - contact a workshop $^{[2]}$. Shown when the date for service has passed.
Temporarily off ^[1]	A function has been temporarily deactivated and will be reactivated automatically while driving or after the engine is restarted.

^[1] Part of message, shown along with information on the location of the problem.

^[2] An authorized Volvo workshop is recommended.

4.1.10. Date and time

The clock is displayed in both the instrument panel and the center display.

Location of clock

Certain messages and other information may obscure the clock in the instrument panel.

In the center display, the clock is located on the upper right-hand side in the status bar.

Settings for date and time

1 Select Settings → System → Date and Time in the center display's Top view to change settings for time and date format. Adjust the date and time by tapping the up or down arrows on the touchscreen.

Automatic time for vehicles with GPS

When the vehicle is equipped with a navigation system, **Auto Time** is also available. The time zone will then be automatically set to the vehicle's location. In some navigation systems, the current location must also be set to determine the correct time zone. If **Auto Time** is not selected, the time and date can be adjusted using the up and down arrows on the touchscreen.

Daylight savings time

In some countries, the **Auto Daylight Saving Time** setting can be selected to automatically change to daylight savings time. For other countries, the **Daylight Saving Time** setting can be selected manually.

If the battery has been disconnected

If the clock was reset after the vehicle's battery was disconnected, e.g. after a visit to a service workshop, you many need to reset the clock. If the clock is not set, it can affect the vehicle's Internet connection.

4.2.1. Settings

4.2.1.1. Resetting user data when the vehicle changes owners

If the vehicle changes owners, all user data and system settings should be reset to factory defaults.

Vehicle settings can be reset at different levels. Reset all user data and system settings to their original factory defaults when the vehicle changes owner. It is also important to change the owner of the Volvo On Call service.

4.2.1.2. Changing settings in the center display's Top view

You can change settings and information for many of the vehicle's functions via the center display.

- 1 Open Top view by tapping the tab at the top of the screen or by dragging/swiping from the top of the screen downward.
- 2 Tap Settings to open the Settings menu.

Top view with Settings button.

- **3** Tap one of the categories and sub-categories to navigate to the desired setting.
- **4** Change the setting(s). Different types of settings are changed in different ways.

> Changes are saved immediately.

A sub-category in the Settings menu with various possible settings; has a multi-selection button and radio buttons.

4.2.1.3. Resetting center display settings

All settings made in the center display's Settings menu can be reset to default values.

Two types of reset

There are two types of reset in the Settings menu:

- Factory Reset- erases all data and files and resets all settings to factory default.
- Reset Personal Settings- erases personal data and resets personalized settings to factory default.

Resetting settings

Follow these instructions to reset the settings.

(i) Note

Factory Reset is only possible when the vehicle is stationary.

- Tap Settings in the center display's Top view. 1
- Proceed to System \rightarrow Factory Reset. 2
- Select the type of reset you would like to do. 3
- > A pop-up window will appear.
- 4 Tap OK to confirm the reset.

For Reset Personal Settings, confirm the reset by tapping Reset for the active profile or Reset for all profiles.

> The selected settings will be reset.

4.2.1.4. Opening contextual setting in the center display

Most of the settings for the vehicle's basic apps can be changed directly in Top view in the center display via contextual settings.

Top view with button for contextual settings.

Contextual setting is a shortcut for accessing specific settings related to the active function displayed on the screen. Apps that are factory-installed in your vehicle, e.g. **FM radio** and **USB**, are part of Sensus and are used to control the vehicle's integrated functions. The settings for these apps can be changed directly via contextual setting in Top view.

When contextual setting is available:

- 1 Pull down Top view when an app is in expanded form, e.g. Navigation.
- 2 Tap Navigation Settings.
- > The navigation settings page will open.
- 3 Change the desired settings and confirm.

Tap Close or press the Home button under the center display to close Settings view.

Most of the vehicle's basic apps have this contextual setting option, but not all.

Third-party apps
Third-party apps are apps that are not factory-installed in the vehicle's system, but can be downloaded, e.g. **Volvo ID**. Settings for these apps are changed in the apps themselves, not in Top view.

4.2.1.5. Changing system units of measurement

Unit settings are adjusted in the Settings menu in the center display.

- 1 Tap Settings in the Top view in the center display.
- 2 Proceed to System → System Languages and Units → Units of Measurement.
- 3 Choose a measurement standard:
 - Metric kilometers, liters and degrees Celsius.
 - Imperial miles, gallons and degrees Celsius.
 - US miles, gallons and degrees Fahrenheit.
- > The units in the instrument panel and center display are changed.

4.2.1.6. Turning off and adjusting the volume of the center display system sounds

The volume of the center display system sounds can be adjusted or turned off completely.

- 1 Tap Settings in the Top view in the center display.
- 2 Tap Sound → System Volumes.
- **3** Pull the control under **Touch Sounds** to adjust the volume or turn off screen tap sounds. Pull the control to the desired sound level.

4.2.1.7. Changing system language

Language settings are adjusted in the Settings menu in the center display.

Note Changing languages in the center display could mean that certain owner's information will not comply with national or local laws and regulations. Do not change to a language you do not speak well, as it can be difficult to find your way back through the menu. 1 Tap Settings in the Top view in the center display. 2 Proceed to System – System Languages and Units. 3 Select System Language.

A voice control symbol indicates that the language can be used for voice control.

> The language in the instrument panel and center display is changed.

4.2.1.8. Changing the appearance of the center display

The appearance of the center display can be changed by selecting a different theme.

- 1 Tap Settings in the Top view.
- 2 Tap My Car \rightarrow Displays \rightarrow Display Themes.
- 3 Select a theme, e.g. Minimalistic or Chrome Rings.

In addition to these themes, you can also choose between **Normal** and **Bright**. In **Normal**, the background of the screen is dark and the text is light. This option is the default setting for all themes. If the bright version is selected, the background will be light and the text will be dark. This option can, for example, make the screen easier to see in bright daylight conditions.

These alternatives are always available for selection and are not affected by the ambient lighting.

4.2.1.9. Displaying trip data in the instrument panel

Data recorded and calculated by the trip computer can be displayed on the instrument panel.

This data is stored in a trip computer app. You can choose which information the instrument panel will display in the app menu.

Open and navigate in the app $menu^{[1]}$ using the right-hand steering wheel keypad.

- App menu
- 2 Left/right
- 3 Up/down
- 4 Confirm
 - Open the app menu in the instrument panel by pressing (1). 1

(The App menu cannot be opened while there is an unacknowledged message in the instrument panel. The message must be acknowledged by pressing the \bigcirc button (4) before the App menu can be opened).

- Navigate to the trip computer app by moving left or right using (2). 2
- > The top four menu rows show measured values for trip odometer TM. The next four menu rows show measured values for trip odometer TA. Scroll up or down in the list using (3).
- 3 Scroll down to the option buttons to choose which information to show in the instrument panel:
 - Odometer
 - Distance to empty tank
 - Distance to discharged battery
 - Tourist (alternative speedometer)
 - Mileage for trip odometer TM, TA or no display of mileage
 - Current fuel consumption, average fuel consumption for TM or TA, or no display of fuel consumption

Select or clear a selection using the O button (4). The change will apply immediately.

^[1] The illustration is generic - details may vary according to vehicle model.

147 / 1010

4.2.1.10. Trip statistics settings

Trip statistics settings can be reset or adjusted.

Open the **Driver performance** app in the App view to display trip statistics. 1

- 2 Tap Preferences to
 - change the graph scale. Select 1, 10 or 100 km/miles for the bar.
 - reset data after each trip. Performed when the vehicle remains stationary for more than 4 hours.
 - reset data for current trip.

Trip statistics, calculated average consumption, and total driving time are always reset simultaneously.

Unit standards for distance, speed, etc. can be changed via system settings in the center display.

4.2.1.11. Instrument panel settings

Display settings for the instrument panel can be set in the instrument panel's App menu and in the center display's Settings menu.

Settings via instrument panel's app menu

The illustration is generic - details may vary according to vehicle model.

The app menu will open and can be controlled using the right-side steering wheel keypad.

The app menu can be used to set what information will be displayed in the instrument panel

- trip computer
- media player
- phone
- navigation system *.

Settings via center display

Selecting type of information

- 1 Tap Settings in the center display's Top view.
- **2** Tap My Car \rightarrow Displays \rightarrow Driver Display Information.
- **3** Select a background:
 - Show no information in the background
 - Show information for current playing media
 - Show navigation even if no route is set

Select theme

- 1 Tap Settings in the center display's Top view.
- **2** Tap My Car \rightarrow Displays \rightarrow Display Themes.
- **3** Select a theme (appearance) for the instrument panel:
 - Glass
 - Minimalistic
 - Performance
 - Chrome Rings

Select language

- 1 Tap Settings in the center display's Top view.
- 2 Tap System $\ensuremath{\:\rightarrow\:}$ System Languages and Units $\ensuremath{\:\rightarrow\:}$ System Language to select language.
- > A change made here will affect the language in all displays.

The settings are personal and saved automatically in the active driver profile.

4.2.1.12. Date and time

The clock is displayed in both the instrument panel and the center display.

Location of clock

Certain messages and other information may obscure the clock in the instrument panel.

In the center display, the clock is located on the upper right-hand side in the status bar.

Settings for date and time

1 Select Settings -> System -> Date and Time in the center display's Top view to change settings for time and date format. Adjust the date and time by tapping the up or down arrows on the touchscreen.

Automatic time for vehicles with GPS

When the vehicle is equipped with a navigation system, Auto Time is also available. The time zone will then be automatically set to the vehicle's location. In some navigation systems, the current location must also be set to determine the correct time zone. If Auto Time is not selected, the time and date can be adjusted using the up and down arrows on the touchscreen.

Daylight savings time

In some countries, the Auto Daylight Saving Time setting can be selected to automatically change to daylight savings time. For other countries, the Daylight Saving Time setting can be selected manually.

If the battery has been disconnected

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note.

If the clock was reset after the vehicle's battery was disconnected, e.g. after a visit to a service workshop, you many need to reset the clock. If the clock is not set, it can affect the vehicle's Internet connection.

4.2.1.13. Terms of use and data sharing

The first time certain services and apps are started, a pop-up window with the heading Terms and conditions and Data sharing may open.

The aim is to inform the user about Volvo's terms of use and data sharing policy. By accepting data sharing, the user accepts that certain information will be sent from the vehicle. This is required for certain services and apps to work with full functionality.

The data sharing function for connected services and apps is disabled by default^[1]. For certain connected services and apps in the vehicle to work, data sharing must be activated. Data sharing can be set from the center display's settings menu or when the services or apps are started in the center display.

Privacy and data sharing

The software update that became available in November 2017 introduced privacy and data sharing settings for connected services and downloaded apps. These settings can be found under Privacy and data in the settings menu in the vehicle's center display.

There, you can choose which connected services will be allowed to share data. Data sharing for downloaded apps can also be disabled there. Note that services and apps cannot be used as intended if data sharing is disabled.

After a factory reset or e.g. a workshop visit or a software update, your data sharing preferences may be reset to default settings. You will then need to reactivate data sharing for connected services and downloaded apps.

Settings for privacy and data sharing are unique for each driver profile.

^[1] Does not apply to Volvo On Call.

(i) Note

4.2.1.14. Activating and deactivating data sharing

Data sharing for relevant services and apps can be set via the Settings menu in the center display.

- Tap Settings in the center display's Top view.
- Tap System → Privacy and data. 2

3 Select to activate or deactivate data sharing for individual services and all apps.

If data sharing for a connected service or downloaded apps is not activated, this can be done when they are started in the center display. If this is the first time that a service is started, or e.g. after a factory reset or certain software updates, Volvo's terms and conditions for connected services must be accepted. Note that data sharing will then also be activated for other services or apps that sharing has already been accepted for.

(i) Note

After visiting a Volvo workshop, you may need to reactivate data sharing so that services and apps will work again.

4.2.1.15. Unlock settings

You can use the button on the key to change the setting for unlocking. Either all doors unlock when the button is pressed, or pressing the button once unlocks only the driver's door and a second press unlocks the rest of the doors.

The settings made here also affect central locking using the inside door handle.

- 1 Tap Settings in the center display's Top view.
- 2 Tap My Car → Locking → Remote and Interior Unlock.
- 3 Select alternative:
 - All Doors unlocks all doors at the same time.
 - Single Door unlocks the driver's door. Press the key unlock button twice to unlock all doors.

4.2.1.16. Care Key settings

Changes to the Care Key profile in the center display can only be made using another key.

Setting options

The following limitations are available:

- Speed range: 50-180 km/h (30-112 mph)
- Increments: 1 km/h (1 mph)

Adjusting settings

- 1 Unlock the vehicle with a key that is not a Care Key.
- 2 Tap Settings in the center display's Top view.
- 3 Tap System → Driver Profiles → Care Key.
- **4** Check the box to activate restrictions and set the desired restrictions.

4.2.1.17. Lock confirmation settings

In the center display's settings menu, you can choose how the vehicle will indicate that is locked or unlocked.

Different types of locking response

- 1 Tap Settings in the center display's Top view.
- $\label{eq:2} \textbf{Tap My Car} \ \rightarrow \ \textbf{Locking}.$
- 3 Tap Visible Locking Feedback to select when the vehicle should provide a visible response:
 - Lock
 - Unlock
 - Both

Or turn off the function by marking Off .

A Audible Locking Feedback option is also available.

Automatic folding of door mirrors * when locking

- 1 Tap **Settings** in the center display's Top view.
- 2 Tap My Car → Mirrors and Convenience.
- 3 Select Fold Mirror When Locked to activate or deactivate the function.

* Option/accessory.

4.2.1.18. Keyless unlock settings*

It is possible to select which doors should be unlocked during keyless unlocking.

To change this setting:

- 1 Tap **Settings** in the center display's Top view.
- **2** Tap My Car \rightarrow Locking \rightarrow Keyless Unlock.
- 3 Select alternative:
 - All Doors unlocks all doors at the same time.
 - Single Door unlocks the selected door.
- * Option/accessory.

4.2.1.19. Settings for automatically activating the parking brake

Choose whether the parking brake should be activated automatically when the vehicle is switched off.

To change this setting:

- 1 Tap Settings in the center display's Top view.
- 2 Tap My Car → Parking Brake and Suspension and select or deselect the Auto Activate Parking Brake function.

4.2.2. Driver profiles

4.2.2.1. Driver profiles

Many of the vehicle's settings can be customized to the driver's personal preferences and saved in one or more driver profiles.

There are the same number of driver profiles in the vehicle as keys, plus an extra guest profile. These personal settings are automatically saved in the active driver profile. Every key, except the Care Key, can be connected to a personal driver profile. When the linked key is used, the vehicle is customized to the specific settings of that driver profile. Care Key is always connected to the Care Key profile as well as the speed limit set for it. This profile cannot be protected as its own personal profile. The same applies for the guest profile, which cannot be protected or connected to any key.

Which settings are saved in driver profiles?

Many of the settings made in the vehicle will be automatically stored in the active driver profile if the profile is not protected. The vehicle has settings that can be made either personal or global. The personal settings are saved in driver profiles.

Settings that can be saved in a driver profile include, among other things, screens, mirrors, front seats, navigation*, audio and media system, language and voice control.

Some settings are global settings. These settings can be changed but are not saved to a specific driver profile. Changes to global settings affect all profiles.

Global settings

Global settings do not change when driver profiles are changed. They remain the same regardless of which driver profile is currently active.

Keyboard layout is an example of a global setting. If driver profile X is used to add additional keyboard languages, these languages will also be available for driver profile Y. The settings for keyboard layout are not saved to a specific driver profile - the settings are global.

Personal settings

If driver profile X has been used to e.g., set the brightness for the center display, driver profile Y will not be affected by this setting. It will only be saved to driver profile X because brightness setting is a personal setting.

* Option/accessory.

4.2.2.2. Changing a driver profile's name

It is possible to change the names of the different driver profiles used in the vehicle. It is not possible to change the name of a profile connected to a Care Key.

- 1 Tap Settings in the Top view in the center display.
- 2 Tap System → Driver Profiles.
- 3 Select Edit Profile.
- > A menu will open in which the driver profile can be changed.
- 4 Tap the Profile Name box.
- > A keyboard will be displayed and can be used to change the name. Tap $rac{}$ to close the keyboard.
- 5 Save the name change by pressing Back or Close.
- > The name has now been changed.

(i) Note

Profile names may not begin with a space. If a space is entered first, the profile name will not be saved.

4.2.2.3. Connect key to driver profile

A remote key can be linked to a driver profile. This driver profile and all of its settings will then automatically be selected every time the vehicle is used with that particular key.

The first time the key is used, it is not linked to any specific driver profile. The **Guest** profile is automatically activated when the ignition is switched on.

A driver profile can also be selected manually without linking it to any key. When the vehicle is unlocked, the last active driver profile will be activated. If the key has ever been linked to a driver profile, it is not necessary to manually select a driver profile when using that particular key.

Connecting a key to a driver profile

i) Note

A key can only be connected to a driver profile when the vehicle is stationary.

First select the profile you would like to link to the key (if that profile is not already active). The active profile can then be linked to the key.

- 1 Tap Settings in the Top view in the center display.
- 2 Tap System → Driver Profiles.
- 3 Mark the desired profile. The display will return to Home view. The Guest profile cannot be linked to a remote key.
- **4** Pull down Top view again and tap Settings → System → Driver Profiles → Edit Profile.
- 5 Select Connect key to link the profile with the key. A driver profile can only be linked to the key currently being used in the vehicle. If there are any other keys in the vehicle, More than one key is found, put the key you want to connect on backup reader will be displayed.

Location of the backup key reader in the storage compartment.

- > When Profile connected to key is displayed, the key and driver profile have been linked.
- 6 Tap OK.
- > The key used is now linked to the driver profile and will remain so as long as the Connect key box is not deselected.

4.2.2.4. Protecting a driver profile

It may not always be desirable to store settings made in the vehicle to the active driver profile. In these instances, the driver profile can be protected. A profile that is connected to a Care Key cannot be protected.

(i) Note

Protecting a driver profile is only possible when the vehicle is stationary.

To protect a driver profile:

- Tap Settings in the Top view in the center display. 1
- Tap System \rightarrow Driver Profiles. 2
- Select Edit Profile. 2
- A menu will open in which the driver profile can be changed.
- Tap Protect Profile to protect the profile. Δ
- Confirm your selection to protect the profile by tapping Back/Close. 5
- > When the profile is protected, settings made in the vehicle will not be automatically stored to the profile. The changes must instead be saved manually under Settings -> System -> Driver Profiles -> Edit Profile by tapping Save current settings to the profile. If the profile is not protected, the settings will be automatically stored to the profile. You can also save changes to a protected profile by pulling down Top view in the center display, tapping Driver Profiles and then tapping the save icon.

4.2.2.5. Selecting a driver profile

When the center display starts up, the selected driver profile will be shown at the top of the screen. The most recently used driver profile will be active the next time the vehicle is unlocked. A different driver profile can be selected once the vehicle has been unlocked. However, if the key has been linked to a driver profile, this profile will be used instead when the vehicle is started.

There are three options for switching between driver profiles.

Option 1:

- Tap the name of the driver profile shown at the top of the center display when the display starts up. 1
- > A list will appear, showing driver profiles that can be selected.
- Select desired driver profile. 2
- 3 Tap Confirm.
- > The driver profile has now been selected and the system will load the settings stored in that profile.

Option 2:

- 1 Pull down Top view in the center display.
- 2 Tap Profile.
- > The same list as in option 1 will be displayed.
- 3 Select desired driver profile.
- 4 Tap Confirm.
- > The driver profile has now been selected and the system will load the settings stored in that profile.

Option 3:

- 1 Pull down Top view in the center display.
- 2 Tap Settings in the Top view in the center display.
- 3 Tap System → Driver Profiles.
- > A list will appear, showing driver profiles that can be selected.
- **4** Select desired driver profile.
- > The driver profile has now been selected and the system will load the settings stored in that profile.

4.2.2.6. Resetting driver profile settings

Settings that have been saved for one or more driver profiles can be reset when the vehicle is stationary.

Factory Reset is only possible when the vehicle is stationary.

- 1 Tap Settings in the Top view.
- 2 Tap System

 → Factory Reset

 → Reset Personal Settings.
- 3 Select option Reset for the active profile, Reset for all profiles or Cancel.

4.2.3. Center display overview

Many of the vehicle's functions can be controlled from the center display. The center display and its possibilities are presented below.

Three of the center display's basic views. Swipe to the right/left to access Function or App view^[1].

- Function view vehicle functions that can be activated or deactivated with one tap. Certain functions, called "trigger functions", open windows with settings options. One example is the Camera.
- **2** Home view the initial view displayed when the screen is turned on.
- 3 App view shows downloaded apps (third-party apps) as well as apps for integrated functions, such as FM radio. Tap an app icon to open that app.
- 4 Status bar current vehicle activities are shown at the top of the screen. Network and connection information is shown to the left of the status bar. Media-related information, the clock and information about background activities are shown to the right.
- 5 Top view pull the tab down to open Top view. From here, you can access Settings, Owner's manual, Profile and messages stored in the vehicle. In certain cases, contextual setting (e.g. Navigation Settings) and the contextual Owner's Manual (e.g. Navigation Manual) can also be accessed in Top view.
- 6 Navigation takes you to map navigation with e.g. Sensus Navigation *. Tap the tile to expand it.

- 7 Media most recently used media-related apps. Tap the tile to expand it.
- 8 Phone used to access phone-related functions. Tap the tile to expand it.
- 9 Fourth tile most recently used apps or vehicle functions not associated with the other tiles. Tap the tile to expand it.
- 🔟 Climate row information and direct interaction to set temperature and seat heating for example*. Tap the symbol in the center of the climate bar to open Climate view and additional setting options.

(i)Note

The climate system can be used to cool down the media system in the center display if needed. In these cases, the message Climate system Cooling the infotainment system will be shown in the instrument panel.

^[1] In right-hand drive vehicles, these views are mirror images of the ones shown here.

* Option/accessory.

4.2.4. Activating and deactivating the center display

The center display can be temporarily switched off and reactivated using the home button under the screen.

Center display's home button.

When the home button is used, the screen will go dark and the touchscreen no longer reacts to touch. The climate bar will remain visible. All functions connected to the screen continue to operate, such as climate, audio, navigation* and apps. The center display screen can be cleaned when the display is dimmed.

The dimming function can also be used to darken the screen so it is not a distraction while driving.

- Press and hold the button beneath the screen. 1
- The screen will go dark (the climate bar will remain visible). All functions connected to the screen continue to operate.
- **2** To reactivate the screen, briefly press the Home button.

> The view that was displayed before the screen was turned off will be displayed again.

(i) Note

The screen cannot be turned off when a prompt to perform an action is being displayed on the screen.

(i) Note

The center display is turned off automatically when the engine is off and the driver's door is opened.

* Option/accessory.

4.2.5. Handling the center display

Many of the vehicle's functions and features can be controlled and adjusted from the center display. The center display is a touchscreen that reacts to taps and other gestures.

Using the center display's touchscreen

The screen reacts differently depending on whether it is touched by dragging, swiping or tapping. It is possible to e.g. move between different views, mark objects and scroll in a list by touching the screen in various ways.

An infrared light curtain just above the surface of the screen enables the screen to detect when a finger is directly in front of the screen. This technology makes it possible to use the screen even while wearing gloves.

Two people can interact with the screen at the same time, e.g. to adjust climate system settings for both the driver and passenger sides.

(!) Important

Do not use sharp objects on the screen as this could cause scratches.

The following table presents the various procedures for using the screen:

Procedure	Gesture	Result
•	Tap once.	Marks an object, confirms a selection or activates a function.
	Double-tap.	Zooms in on a digital object, such as a map.

Procedure	Gesture	Result
	Press and hold.	Grabs hold of an object so it can be moved. Can be used to move apps or points on a map. Press and hold your finger on the screen and drag the object to the desired position.
i	Tap once with two fingers.	Zooms out from a digital object, such as a map.
	Drag	Moves between screen views or scrolls in a list, text or a view. Press and hold to drag apps or points on a map. Drag horizontally or vertically over the screen.
N	Swipe	Moves between screen views or scrolls in a list, text or a view. Drag horizontally or vertically over the screen. Note that touching the upper part of the screen could cause Top view to open.
	Stretch	Zooms in.
	Pinch	Zooms out.

Returning to Home view from another view

- 1 Briefly press the home button below the center display.
- > The most recent Home view mode will be displayed.
- 2 Press briefly again.
- > All of the Home view's tiles will return to standard mode.

(i) Note

In Home view's standard mode – short press on the Home button. An animation describing access to the various views is shown on the screen.

Scrolling in lists, articles or views

A scroll indicator is displayed on the screen when it is possible to scroll up or down in the view. Swipe down/up anywhere in the view.

The scroll indicator will be shown in the center display when it is possible to scroll in the view.

Using the center display controls

Temperature control.

Digital controls are available for many of the vehicle's functions. For example, to set the temperature:

- drag the control to the desired temperature,
- tap + or to raise or lower the temperature by degrees, or
- tap the desired temperature on the control.

4.2.6. Navigating in the center display's views

There are five different basic views in the center display: Home view, Top view, Climate view, App view and Function view. The screen is automatically activated when the driver's door is opened.

Home view

Home view is the view displayed when the screen is activated. It consists of four tiles: Navigation, Media, Phone and a fourth tile.

An app or vehicle function selected from the App or Function views will start in the respective tile in Home view. FM radio, for example, will start in the Media tile.

The extra tile displays the most recently used app or vehicle function that is not related to the other three tiles.

The tiles display brief information about the respective apps.

(i) Note

When the vehicle is started, information on the current status of apps will be displayed in the respective tile in Home view.

(i) Note

In Home view's standard mode – short press on the Home button. An animation describing access to the various views is shown on the screen.

(i) Note

When the vehicle is moving:

- Certain functions (e.g. using the center display's keyboard) may be deactivated.
- Certain texts (e.g. those generated by apps) will be shortened to three rows. Tap the **Read out** button to have the entire message read aloud.
- Text messages will be shortened to one row. Tap the **Read out** button to have the entire message read aloud.

Status bar

Current vehicle activities are shown at the top of the screen in the status bar. Network and connection information is shown to the left of the status bar. Media-related information, the clock and information about background activities are shown to the right.

Top view

Top view when expanded.

There is a tab in the center of the status bar at the top of the screen. Open Top view by tapping the tab or by dragging/swiping from the top of the screen downward.

Top view always provides access to:

- Settings
- Owner's manual
- Profile
- The vehicle's stored messages.

In certain cases, Top view provides access to:

- Contextual setting (e.g. Navigation Settings). Change settings directly in Top view when an app (e.g. navigation) is being used.
- Contextual Owner's Manual (e.g. Navigation Manual). Access articles in the digital Owner's Manual related to the content shown on the screen, directly in Top view.

To exit Top view, tap the screen outside Top view, press the Home button or tap the screen at the bottom of Top view and swipe upward. The views behind will become visible again and can be used.

(i) Note

The top view is not available at start-up/shutdown or when a message is being shown on the screen. Similarly, it is not available when the climate view is shown.

Climate view

The climate bar is always visible at the bottom of the screen. The most common climate settings can be made directly there, such as setting temperature and seat heating *.

Tap the symbol in the center of the climate bar to open Climate view and access additional climate system settings.

Tap the symbol to close Climate view and return to a previous view.

App view

App view showing the vehicle's apps.

Swipe the screen from right to left^[1] to access the App view from the Home view. This view displays downloaded apps (thirdparty apps) as well as apps for integrated functions, such as FM radio. Brief information will be displayed directly in App view for certain apps, such as unread text messages for Messages.

Tap an app to open it. It will then be opened in its associated tile, e.g. Media.

Depending on the number of apps, it is possible to scroll down in App view. This is done by sweeping/dragging from the bottom upwards.

To return to Home view, swipe the screen from left to right^[1] or press the Home button.

Function view

Function view with buttons for various vehicle functions.

Swipe the screen from left to right^[1] to access Function view from Home view. From Function view, you can activate or deactivate various vehicle functions such as BLIS*, Lane Keeping Aid* and Park Assist*.

If there are many functions, you can also scroll downward through the view. This is done by sweeping/dragging from the bottom upwards.

Unlike in App view, where you tap an app to open it, in Function view, tapping a function activates or deactivates it. Certain functions (trigger functions) open in their own window when tapped.

To return to Home view, swipe the screen from right to left^[1] or press the Home button.

- * Option/accessory.
- ^[1] Applies for left-hand drive vehicles. For right-hand drive vehicles, swipe in the other direction.

4.2.7. Handling tiles in the center display

Home view consists of four tiles: Navigation, Media, Phone and a fourth tile. These views can be expanded.

Expanding a tile from standard mode

Standard mode and expanded mode of a tile in the center display.

Expanding a tile:

1 For tiles **Navigation, Media** and **Phone**: Tap the screen anywhere in the tile. When a tile is expanded, the extra tile in Home view will be temporarily hidden. The other two tiles will be minimized and only show certain information. When the extra tile is tapped, the other three tiles are minimized and only certain information is displayed.

Expanded view provides access to the basic functions of the respective apps.

Closing an expanded tile:

- **1** The tile can be closed in three different ways:
 - Tap the top section of the expanded tile.
 - Tap another tile (it will then be opened in expanded mode instead).
 - Press briefly on the Home button under the center display.

Opening or closing a tile in full-screen mode

The fourth tile^[1] and tile for **Navigation** can be opened in full-screen mode to show additional information and possible settings.

When a tile is opened in full-screen mode, no information from the other tiles is displayed.

In expanded mode, open the app in full-screen mode. Tap the symbol.

To return to expanded mode, tap the symbol or press the Home button under the screen.

Center display's home button.

You can always press the Home button to return to Home view. To return to Home view's standard view from full-screen mode, press the Home button twice.

^[1] Does not apply to all apps or vehicle functions opened via the fourth tile.

4.2.8. Symbols in the center display status bar

Overview of symbols displayed in the center display status bar.

The status bar shows current vehicle activities and in certain cases, also their status. Due to the limited space in the status bar, not all symbols will be displayed at all times.

Symbol	Meaning
	Connected to the Internet.
	Roaming activated.
	Cell phone network signal strength.
	Bluetooth device connected.
►	Bluetooth activated but no device connected.
	Information sent to and from GPS.
	Connected to Wi-Fi network.
	Tethering activated (Wi-Fi hotspot). This means that the vehicle shares an available Internet connection.
	Vehicle modem activated.
	USB sharing active.
	Phone is wirelessly charging.
	Action in progress.
	Timer for preconditioning active. ^[1]
	Audio source being played.
	Audio source paused.
	Phone call in progress.
	Audio source muted.
	News broadcasts from current radio station. ^[2]
	Traffic information being received. ^[2]
	Clock.

^[1] Only hybrid models.

^[2] Not available in all markets.

4.2.9. Function view in the center display

Function view, which is one of the center display's basic views, contains all of the vehicle's function buttons. From the Home view, navigate to Function view by swiping from left to right over the screen^[1].

Different types of buttons

There are three different types of buttons for vehicle functions; see below:

Type of button	Functions	Vehicle function affected
Function buttons	Have On/Off modes. When a function is active, an LED indicator light will illuminate to the left of the button's icon. Press the but- ton to turn the function on or off.	Most buttons in Function view are func- tion buttons.

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note.

Type of button	Functions	Vehicle function affected
Trigger buttons	Do not have On/Off modes. Pressing a trigger button opens a window for the function. This can be, for example, a window to change seat position.	Camera Headrest Fold
Parking buttons	Have On/Off and scanning modes. Similar to function buttons, but have an extra mode for parking scanning.	Park InPark Out

Button modes

When a function or parking button's LED indicator is green, the function is activated (on). For some functions, an additional text explaining the function will be shown when the function is initially activated. The text will be displayed for a few seconds and then the button will be displayed with the LED indicator illuminated.

For Lane Keeping Aid, for example, the text Works only at certain speeds will be displayed when the button is pressed.

Press the button once briefly to activate or deactivate the function.

Aid Lane

The function is deactivated when the LED indicator light is switched off.

A warning triangle in the right-hand section of the button indicates that something is not working correctly.

^[1] Applies for left-hand drive vehicles. For right-hand drive vehicles, swipe in the other direction.

4.2.10. Moving apps and buttons in the center display

The apps and buttons for vehicle functions can be moved and organized in the App and Function views.

- Swipe from right to left^[1] to access App view or swipe from left to right^[1] to access Function view. 1
- Press and hold an app or button. 2
- The app or button will change size and become slightly transparent. It can then be moved.
- Drag the app or button to an available position in the view. 3

A maximum of 48 rows can be used to position apps or buttons. To move an app or button outside the visible view, drag it to the bottom of the view. New rows will be added and the app or button can be placed in one of these.

Apps or buttons placed below the view's normal display will not be visible on the screen.

Swipe the screen to scroll up or down in the view to display information outside the view.

174 / 1010

(i) Note

Hide the apps that are rarely or never used by moving them far down, outside of the visible view. This makes it easier to find the apps used more frequently.

(i) Note

Apps and vehicle function buttons cannot be situated at spots already in use.

^[1] Applies for left-hand drive vehicles. For right-hand drive vehicles, swipe in the other direction.

4.2.11. Messages in the center display

The center display shows messages in certain circumstances to inform or assist the driver.

Example of message in the center display's Top view.

Messages with lower priority for the driver are shown in the center display.

Most of the messages are shown in the center display's status bar. The message will disappear from the status bar after a short period of time or after the required action has been taken. Messages that need to be saved are stored in Top view in the center display.

The message may be shown along with graphics, symbols or a button to e.g. activate/deactivate a function connected to the message.

Pop-up messages

Messages are sometimes shown as pop-up windows. Pop-up messages have a higher priority than messages shown in the status bar and require acknowledgment/action before they disappear.

4.2.12. Keyboard in the center display

You can use the keyboard in the center display to enter characters or to switch to handwriting mode to "write" letters and characters on the screen.

The keyboard can be used to enter characters (letters, numbers, symbols, etc.) to e.g. send text messages from the vehicle, enter passwords or search for information in the digital Owner's Manual.

The keyboard will only appear when it is possible to enter text on the screen.

The keyboard cannot be used while the vehicle is moving.

The illustration shows an overview of some of the buttons that may be shown on the keyboard. The appearance may vary depending on language settings and the context in which the keyboard is used.

- Row showing suggestions for words or characters^[1]. The suggested words change as new letters are entered. Scroll through the list of suggested words by tapping the right or left arrows. Tap a suggestion to select it. Please note that this function is not available in all languages. When unavailable, this row will not be shown on the keyboard.
- 2 Available characters are adapted to the language selected for the keyboard (see number 7 below). Tap a character to enter it.
- 3 Different buttons are displayed here depending on the context in which the keyboard is used, e.g. @ to enter an email address or the return key to start a new line.
- 4 This button hides the keyboard. In cases where this is not possible, the button will not be displayed.
- **5** Used to enter uppercase letters. Tap once to enter one uppercase letter and then continue with lowercase letters. Tap twice for caps lock (all text will be entered in uppercase letters). Tap again to return the keyboard to lowercase letters. In this mode, the first letter after a period, exclamation point or question mark will be automatically entered in uppercase form. The first letter entered in text fields will also be uppercase. In text fields intended for names or addresses, each word will be automatically started with an uppercase letter. In text fields intended for passwords, website addresses or email addresses, all letters will automatically be lowercase unless uppercase is selected.
- 6 Used to enter numbers. The number keyboard (2) will then be displayed. Tap ABC, which is shown instead of 123 in number mode, to return to the keyboard with letters, or #\~ to display the keyboard with special characters.
- Vsed to change the keyboard language, e.g. EN. The available characters and word suggestions (1) vary depending on the selected language. In order to toggle between keyboard languages, the languages must first be added under Settings.

8 Space bar.

9 Delete. Tap to delete characters one at a time. Press and hold to delete multiple characters quickly.

Used to change to handwriting mode.

Tap the confirm button over the keyboard once to confirm the text that has been entered. The button's appearance differs depending on the context.

Variants of letters or characters

Variants of a letter or character, e.g. é or è, can be entered by pressing and holding the letter or character. A box containing possible variants of the letter or character will appear. Tap the desired variant. If no variant is selected, the original letter/character will be used.

^[1] For Asian languages.

4.2.13. Entering characters, letters and words by hand in the center display

Characters, letters and words can be entered in the center display by handwriting them on the touchscreen.

Tap the button on the center display's keyboard to switch from the keyboard to handwriting mode.

- 1 Space for entering characters/letters/words/parts of words.
- **2** Text field displaying suggested characters or words^[1] as they are written on the screen (1).
- **3** Suggestions for characters/letters/words/parts of words. You can scroll through the list.
- Space bar. Blank spaces can be created by writing a dash (–) in the field for handwritten letters (1). See "Writing blank spaces in free-text fields" below.
- 5 Delete. Tap once to erase one character/letter at a time. Wait a moment before tapping again to erase the next character, letter etc.
- 6 Return to the standard keyboard layout.
- **7** Switch off/on screen tap sounds.
- 8 Hide the keyboard. In cases where this is not possible, the button will not be displayed.
- 9 Change language for text input.

- 1 Write a character, a letter, a word or parts of a word in the field for handwritten letters. Write the word or part of the word vertically or horizontally.
- > A number of suggestions for characters, letters or words will be displayed. The most likely will be shown at the top of the list.

> The character/letter/word at the top of the list will be used. Tap one of the other characters/letters/words in the list to use it instead.

Erasing/changing handwritten characters/letters

Erase text in the text field (2) by swiping over the handwriting field (1).

- 1 Characters/letters can be erased or changed in several ways:
 - Tap the desired letter or word in the list.
 - Tap the delete button to erase the letter and start again.
 - Swipe horizontally from right to left^[2] over the handwriting field. Erase several letters at once by swiping over the area several times.
 - Tap the X box in the text field to erase all written text.

New lines in free-text fields in handwriting mode

Create a new line by drawing above the characters in the handwriting field as shown in the illustration^[3].

Writing blank spaces in free-text fields

Make a blank space by drawing a line from left to right $^{[4]}$.

OMRON SOFTWARE

compactWnn © OMORON SOFTWARE Co.,Ltd. 2021 All Rights Reserved.

- ^[1] Certain system languages only.
- ^[2] For Arabic keyboards, swipe in the other direction. Swiping from right to left will create a blank space.
- ^[3] For Arabic keyboards, draw the same character, but in mirror image.
- ^[4] For Arabic keyboards, draw the line from right to left.

4.2.14. Changing keyboard language in the center display

In order to toggle between keyboard languages, the languages must first be added under Settings.

Adding or deleting languages in Settings

The keyboard is automatically set to the same language as the system language. The keyboard language can be manually changed without affecting the system language.
- 1 Tap Settings in Top view.
- 2 Tap System \rightarrow System Languages and Units \rightarrow Keyboard Layouts.
- **3** Select one or more languages in the list.
- > It is now possible to toggle between the selected languages using the keyboard.

If no language has been selected under **Settings**, the keyboard will remain in the same language as the vehicle's system language.

Toggling between keyboard languages

If more than one language has been selected in **Settings**, the button in the keyboard can be used to switch between the different languages.

To toggle between keyboard languages from the list:

- 1 Press and hold the button.
- > A list will appear.
- 2 Select the desired language. If more than four languages have been selected under **Settings**, you can scroll through the list shown on the keyboard.
- > The keyboard and word suggestions will be adapted to the selected language.

To change keyboard language without displaying the list:

- 1 Tap the button.
- > The keyboard layout will change to the next language in the list without displaying the list.

4.2.15. Displaying trip statistics in the center display

Trip computer statistics can be displayed graphically in the center display, providing an overview that facilitates more fuel-efficient driving.

Open the Driver performance app in the App view to display trip statistics.

Each bar in the graph represents a driving distance of 1 kilometers, 10 kilometers or 100 kilometers (or miles). The bars are added from the right as you drive. The bar at the far right shows the data for the current trip.

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note.

181 / 1010

Average fuel consumption and total driving time are calculated from the most recent reset of the trip statistics.

Fuel and electricity consumption are shown in separate graphs. The electricity consumption shows "net" consumption, i.e. consumed current minus regenerated current generated by braking.

Trip computer statistics^[1].

^[1] The illustration is generic - details may vary according to vehicle model.

4.2.16. Owner's Manual in the center display

The Owner's Manual is available in the vehicle's center display^[1].

() Important

To familiarize yourself with important safety instructions and to optimize your experience, Volvo recommends reading the owner's information under each category in the center display in its entirety before driving the vehicle for the first time.

() Important

The driver is always responsible for operating the vehicle in a safe manner and adhering to all applicable laws and regulations. It is also important that the vehicle is operated, maintained and serviced according to Volvo's recommendations provided in the owner's information.

Finding information in the vehicle's center display

You can access the Owner's Manual by:

1 Swiping from the top downwards on the center display to open Top view.

2 Tapping Owner's Manual.

Find information by:

- using the search function
- visually navigating using exterior and interior images
- clicking through categories.

(i) Note

The digital Owner's Manual is not available during driving.

Changing languages in the center display could mean that some of the owner's information will not comply with national or local rules and regulations. Do not change to a language that you do not understand well, as this could make it difficult for you to navigate back through the menu.

Shortcut to related owner's information

There is a shortcut in Top view that opens an article in the Owner's Manual related to the content shown on the screen. For example, **Navigation Manual** is a shortcut to an article related to navigation.

Certain apps in the vehicle only. For downloaded third-party apps, it is e.g. not possible to access app-specific articles.

Printed information and support site^[2]

Other printed information may also be provided in the vehicle, depending on equipment level, market, etc.

The accompanying supplement can also be ordered. Contact a Volvo retailer to order.

The Owner's Manual is also on volvocars.com/intl/support [https://www.volvocars.com/intl/support] [2].

(i) Note

If the information in the digital Owner's Manual and the printed supplement **Selected topics from the Owner's Manual** differ, the printed information applies.

^[1] Available in most markets.

^[2] Not available in all markets.

4.2.17. Navigate in the Owner's Manual in the center display

The digital Owner's Manual can be accessed from the center display's Top view. The contents are searchable and the sections are designed to be easy to navigate.

The Owner's Manual is accessed from Top view.

1 To open the Owner's Manual, pull down Top view in the center display and tap Owner's manual.

There are a number of ways to find information in the Owner's Manual. The options can be accessed from the Owner's Manual start page and from the Top menu.

Opening the menu in the Top menu

- 1 Tap \equiv in the upper list in the Owner's Manual.
- > A menu will open, displaying different options for finding information:

Start page

Tap the symbol to return to the Owner's Manual start page.

Categories

The articles in the Owner's Manual are structured into main and sub-categories. The same article may appear in several relevant categories in order to help make them easier to find.

- 1 Tap Categories.
- > The main categories are listed.

- Tap a main category (🛄). 2
- A list of sub-categories (\Box) and articles (\Box) will appear.
- Tap an article to open it. 3

To go back, tap the left arrow.

Quick Guide

Tap the symbol to go to a page with links to a selection of useful articles about the vehicle's more commonly used features and functions. The articles can also be accessed via categories, but have been collected here for quicker access. Tap an article to read it in its entirety.

Exterior and interior hotspots

Exterior and interior overviews of the vehicle. Hotspots are provided for certain functions, components, etc. Tap a hotspot to come to a relevant article.

- Press Exterior or Interior.
- > Exterior or interior images of the vehicle are shown with hotspots. The hotspots lead to articles about the corresponding function, component, etc. Swipe the screen horizontally to scroll between the images.
- Tap a hotspot. 2
- The title of a relevant article will be displayed.
- Tap the title to open the article. 3

To go back, tap the left arrow.

Favorites

Tap the symbol to go to articles saved as favorites. Tap an article to read it in its entirety.

Saving or deleting favorite articles

Save an article as a favorite by tapping the \overleftrightarrow at the upper right when the article is open. When an article has been saved as a favorite, the star symbol will be filled in: \bigstar .

To remove an article from the list of favorites, tap its star again.

185/1010

Video

Tap the symbol to go to brief instructive videos for various functions in the vehicle.

Information

Tap the symbol for information about the current version of the Owner's Manual in your vehicle and other useful information.

Using the search function in the Top menu

- 1 Tap Q in the Owner's Manual upper menu. A keyboard will appear at the bottom of the screen.
- 2 Enter a search word, e.g. "seat belt".
- > Suggested articles and categories will be displayed as characters are entered.
- 3 Tap the article or category to read it.

4.3. Symbols and messages

4.3.1. Handling messages

4.3.1.1. Messages in the center display

The center display shows messages in certain circumstances to inform or assist the driver.

ړي Set	j) tings	FM Radio Settings) Owner's manual	FM Radio Manual	S. Profile
	Ļ	Camera The camera is te		ınavailable	
	\mathbb{O}	Volvo On Call : Please contact y	subscripti our dealer	on has expired to activate	

Example of message in the center display's Top view.

Messages with lower priority for the driver are shown in the center display.

Most of the messages are shown in the center display's status bar. The message will disappear from the status bar after a short period of time or after the required action has been taken. Messages that need to be saved are stored in Top view in the center display.

The message may be shown along with graphics, symbols or a button to e.g. activate/deactivate a function connected to the message.

Pop-up messages

Messages are sometimes shown as pop-up windows. Pop-up messages have a higher priority than messages shown in the status bar and require acknowledgment/action before they disappear.

4.3.1.2. Handling messages in the center display

Messages in the center display are handled in the center display's views.

Example of message in the center display's Top view.

Some messages in the center display have a button (or several buttons in a pop-up message) to e.g. activate/deactivate a function related to the message.

Handling new messages

For messages with buttons:

- 1 Tap the button to perform the action or let the message automatically time-out after a short period.
- > The message will disappear from the status bar.

For messages without buttons:

- 1 Close the message by tapping it or let the message automatically time-out after a short period.
- > The message will disappear from the status bar.

Messages that need to be saved are stored in Top view in the center display.

4.3.1.3. Handling messages saved from the center display

Messages saved from the instrument panel and center displays are handled in the center display.

Examples of saved messages and possible selections in Top view.

Messages that have been shown in the center display and that need to be saved are stored in the center display's Top view.

Reading saved messages

Open Top view in the center display.

- > A list of saved messages will be displayed. Messages with an arrow to the right can be expanded.
- **2** Tap a message to expand/minimize it.
- > More information about the message will appear in the list and the image to the left of the app will display information about the message in graphic form.

Handling saved messages

Some messages have a button to e.g. activate/deactivate a function related to the message.

1 Tap the button to perform the action.

Saved messages in Top view are automatically deleted when the ignition is switched off.

4.3.1.4. Messages in the instrument panel

The instrument panel shows messages in certain circumstances to inform or assist the driver.

Example of message in the instrument panel. The illustration is generic - details may vary according to vehicle model.

High-priority messages for the driver are displayed in the instrument panel.

The messages may appear in different parts of the instrument panel depending on what other information is currently being displayed. The message will disappear from the instrument panel after a short period of time or after it has been acknowledged or any required action has been taken. Messages that need to be saved are stored in the **Car Status** app, which can be opened from the App view in the center display.

The message may be shown along with graphics, symbols or buttons to e.g. acknowledge the message or accept a request.

Service messages

The following table lists a selection of important service messages and what they mean.

Message	Meaning
Stop safely ^[1]	Stop and switch off the engine. Serious risk of damage - contact a workshop $^{[2]}$.
Turn off engine ^[1]	Stop and switch off the engine. Serious risk of damage - contact a workshop $^{[2]}$.
Service urgent Drive to workshop ^[1]	Contact a workshop ^[2] to have the vehicle inspected immediately.
Service required ^[1]	Contact a workshop ^[2] to have the vehicle inspected as soon as possible.
Regular maintenance Book time for maintenance	Time for service - contact a workshop ^[2] . Shown before the next service date.
Regular maintenance Time for maintenance	Time for service - contact a workshop ^[2] . Shown on the next service date.
Regular maintenance Maintenance overdue	Time for service - contact a workshop ^[2] . Shown when the date for service has passed.
Temporarily off ^[1]	A function has been temporarily deactivated and will be reactivated automatically while driving or after the engine is restarted.

^[1] Part of message, shown along with information on the location of the problem.

^[2] An authorized Volvo workshop is recommended.

4.3.1.5. Handling messages in the instrument panel

Messages in the instrument panel are controlled using the right-side steering wheel keypad.

Examples of messages in the instrument panel and the right-side steering wheel keypad. The illustration is generic - details may vary according to vehicle model.

Some messages in the instrument panel contain one or more buttons for e.g. confirming the message or accepting a request.

Handling new messages

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note. 190 / 1010 For messages with buttons:

- 1 Navigate between the buttons by tapping left or right (1).
- **2** Confirm your selection by pressing confirm (2).
- > The message will disappear from the instrument panel.

For messages without buttons:

- 1 Close the message by pressing confirm (2) or let the message automatically time-out after a short period.
- > The message will disappear from the instrument panel.

Messages that need to be saved are stored in the **Car Status** app, which can be opened from the App view in the center display. The message **Vehicle message stored in Car Status** app will simultaneously appear in the center display.

4.3.1.6. Handling messages saved from the instrument panel

Messages saved from the instrument panel and center displays are handled in the center display.

Saved messages can be viewed in the Car Status app.

The messages displayed in the instrument panel that need to be saved are stored in the **Car Status** app in the center display. The message **Vehicle message stored in Car Status** app will simultaneously appear in the center display.

Reading saved messages

To read a saved message immediately:

- 1 Tap the button to the right of the message Vehicle message stored in Car Status app in the center display.
- > The saved message will be displayed in the **Car Status** app.

To read saved messages at a later time:

- 1 Open the Car Status app from App view in the center display.
- > The app will open in the bottom tile of Home view.
- 2 Select the Messages tab in the app.
- > A list of saved messages will be displayed.
- **3** Tap a message to expand/minimize it.
- > More information about the message will appear in the list and the image to the left of the app will display information about the message in graphic form.

Handling saved messages

In expanded form, some messages have two buttons available for booking service or reading the Owner's Manual.

Booking service for saved messages:

- 1 With the message in expanded form, tap Request appoint./Call to make Appointment^[1] for assistance booking service.
- With Request appoint.: The Appointments tab will open in the app and create a request for a service/repair appointment. With Call to make Appointment: The phone app will open and call a service center to make an appointment for service or repairs.

Reading the Owner's Manual for saved messages:

- 1 With the message in expanded form, tap **Owner's manual** to read relevant information about the message in the Owner's Manual.
- > The Owner's Manual will open in the center display and provide information related to the message.

Saved messages in the app are automatically deleted each time the engine is started.

^[1] Market dependent. Volvo ID and selected workshop also need to be registered.

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note. 192 / 1010

4.3.2. BLIS* messages

A number of messages related to BLIS^[1] may be displayed in the instrument panel. Several examples are provided below.

Message	Meaning
Blind spot sensor Service required	The system is not functioning as intended. Contact a workshop ^[2] .
Blind spot system off Trailer attached	BLIS and Cross Traffic Alert* have been deactivated because a trailer has been connected to the vehicle's electrical system.

A text message can be erased by briefly pressing the O button in the center of the right-side steering wheel keypad.

If the message persists, contact a workshop. An authorized Volvo workshop is recommended.

- * Option/accessory.
- ^[1] Blind Spot Information
- ^[2] An authorized Volvo workshop is recommended.

4.3.3. City Safety messages

A number of messages related to City Safety may be displayed in the instrument panel. Several examples are provided below.

Message	Meaning
City Safety Automatic intervention	When City Safety is braking or has activated the automatic braking function, one or more symbols may illuminate in the instrument panel and a text message may be displayed.
City Safety Reduced functionality Service required	The system is not functioning as intended. Contact a workshop ^[1] .

A text message can be erased by briefly pressing the O button in the center of the right-side steering wheel keypad.

If a message cannot be erased, contact a workshop^[1].

^[1] An authorized Volvo workshop is recommended.

4.3.4. Cross Traffic Alert* messages

A number of messages related to Cross Traffic Alert (CTA) may be displayed in the instrument panel. Several examples are provided below.

Message	Meaning
Blind spot sensor Service required	The system is not functioning as intended. Contact a workshop ^[1] .
Blind spot system off Trailer attached	$BLIS^{[2]}$ and CTA have been deactivated because a trailer has been connected to the vehicle's electrical system.

A text message can be erased by briefly pressing the O button in the center of the right-side steering wheel keypad.

If the message persists, contact a workshop. An authorized Volvo workshop is recommended.

* Option/accessory.

- ^[1] An authorized Volvo workshop is recommended.
- ^[2] Blind Spot Information System

4.3.5. Electronic Stability Control symbols and messages

A number of symbols and messages related to Electronic Stability Control (ESC^[1]) may be displayed in the instrument panel. Several examples are provided below.

Symbol	Message	Meaning
	Steady glow for approx. 2 seconds	System check when the engine is started.
	Flashing light	The system is actively operating.
CFF	Steady glow	Sport mode is activated. NOTE! The system is not deactivated in this mode, but has partially reduced functionality.
-	Traction control Temporarily off	The system's functionality has been temporarily reduced due to high brake system temperatures. The function will be auto- matically reactivated when the brakes have cooled.
	ESC Service required	The system is not functioning properly. Stop the vehicle in a safe place, turn off the engine and then restart it.

A text message can be erased by briefly pressing the O button in the center of the right-side steering wheel keypad.

If the message persists, contact a workshop. An authorized Volvo workshop is recommended.

^[1] Electronic Stability Control

4.3.6. Symbols and messages for Adaptive Cruise Control*

A number of symbols and messages relating to Adaptive Cruise Control^[1] (ACC^[2]) may be displayed. Several examples are provided below.

Symbol	Message	Meaning
$\overline{(3)}$	The symbol is illuminated	The vehicle is maintaining the stored speed.
	Adaptive Cruise Contr. Unavailable The symbol is extinguished	Adaptive Cruise Control is in standby mode.
	Adaptive Cruise Contr. Service required The symbol is extinguished	The system is not functioning as intended. Contact a workshop – an authorized Volvo workshop is recommended.
<u>[]i</u>	Windscreen sensor Sensor blocked, see Owner's manual	Clean the windshield in front of the camera and radar sensors.

A text message can be erased by briefly pressing the O button in the center of the right-side steering wheel keypad.

If the message persists, contact a workshop. An authorized Volvo workshop is recommended.

- * Option/accessory.
- ^[1] Depending on market, this function can be either standard or optional.
- ^[2] Adaptive Cruise Control

4.3.7. Pilot Assist* symbols and messages

A number of symbols and messages relating to Pilot Assist^[1] may be displayed. Several examples are provided below.

Symbol	Message	Meaning
	Extinguished steering wheel symbol	Indicates that steering assistance is deactivated. When Pilot Assist is providing steering assistance, the steering wheel is illuminated.
	Symbol for hands on the steering wheel	The system cannot detect the driver's hands on the steering wheel. Place your hands on the steering wheel and actively steer the vehicle.
<u>[]i</u>	Windscreen sensor Sensor blocked, see Owner's manual	Clean the windshield in front of the camera and radar sensors.

A text message can be erased by briefly pressing the O button in the center of the right-side steering wheel keypad.

If the message persists, contact a workshop. An authorized Volvo workshop is recommended.

* Option/accessory.

4.3.8. Lane Keeping Aid symbols and messages

A number of symbols and messages related to Lane Keeping Aid (LKA^[1]) may be displayed in the instrument panel. Several examples are provided below.

Symbol	Message	Meaning
<u>[]i</u>	Driver support system Reduced functionality Service required	The system is not functioning as intended. Contact a workshop ^[2] .
<u>[]i</u>	Windscreen sensor Sensor blocked, see Owner's manual	The camera's ability to detect the lane in front of the vehicle is reduced.
<i>1</i>]	Lane Keeping Aid Apply steering	LKA's steering assistance is disabled when the driver's hands are not on the wheel. Follow the instructions and steer the vehicle.
	Lane Keeping Aid Standby until steering applied	LKA will go into standby mode until the driver begins steering the vehicle again.

A text message can be erased by briefly pressing the O button in the center of the right-side steering wheel keypad.

If the message persists, contact a workshop. An authorized Volvo workshop is recommended.

^[1] Lane Keeping Aid

^[2] An authorized Volvo workshop is recommended.

4.3.9. Lane Keeping Aid display

Lane Keeping Aid (LKA^[1]) uses symbols in the instrument panel for various situations.

Some examples of symbols and descriptions of the situations in which they might appear are provided below.

Available

Available – the marker lines in the symbol are white.

Lane Keeping Aid is able to detect one or both of the traffic lane's side marker lines.

Unavailable

Unavailable – the marker lines in the symbol are extinguished.

Lane Keeping Aid is unable to detect the lane marker lines, the vehicle's speed is too low or the road is too narrow.

Steering/warning indicator

Steering/warning – the marker lines in the symbol are colored.

Indicates that the Lane Keeping Aid system is alerting the driver and/or attempting to steer the vehicle back into the lane.

^[1] Lane Keeping Aid

4.3.10. Park Assist Pilot* messages

Messages for Park Assist Pilot (PAP^[1]) may be displayed in the instrument panel and/or the center display. Several examples are provided below.

Message	Meaning
Park Assist System Sensors blocked, cleaning needed	One or more of the sensors are blocked. Check and clean/remove the obstacle as soon as possible.
Park Assist System Unavailable Service required	The system is not functioning as intended. Contact a workshop ^[2] .

A text message can be erased by briefly pressing the O button in the center of the right-side steering wheel keypad.

If the message persists, contact a workshop. An authorized Volvo workshop is recommended.

* Option/accessory.

- ^[1] Park Assist Pilot
- ^[2] An authorized Volvo workshop is recommended.

4.3.11. Park Assist symbols and messages

Symbols and messages for the Park Assist may be displayed in the instrument panel and/or the center display. Several examples are provided below.

Symbol	Message	Meaning
Pw		The rear Park Assist sensors are turned off and no acoustic warnings for obstacles/objects will be provided.
	Park Assist System Sensors blocked, cleaning needed	One or more of the sensors are blocked. Check and clean/remove the obstacle as soon as possible.
	Park Assist System Unavailable Service required	The system is not functioning as intended. Contact a workshop ^[1] .

A text message can be erased by briefly pressing the O button in the center of the right-side steering wheel keypad.

If the message persists, contact a workshop. An authorized Volvo workshop is recommended.

^[1] An authorized Volvo workshop is recommended.

4.3.12. Park Assist Camera symbols and messages*

Symbols and messages for the Park Assist Camera may be displayed in the instrument panel and/or the center display. Several examples are provided below.

Symbol	Message	Meaning
Pw		The rear Park Assist sensors are turned off and no acoustic warnings or field markings for obstacles/objects will be provided.
1		The camera is not functioning properly.
	Park Assist System Sensors blocked, cleaning needed	One or more of the sensors are blocked. Check and clean/remove the obstacle as soon as possible.
	Park Assist System Unavailable Service required	The system is not functioning as intended. Contact a workshop ^[1] .

A text message can be erased by briefly pressing the O button in the center of the right-side steering wheel keypad.

If the message persists, contact a workshop. An authorized Volvo workshop is recommended.

- * Option/accessory.
- ^[1] An authorized Volvo workshop is recommended.

4.3.13. Symbols and messages for steering assistance during collision risks

A number of symbols and messages related to steering assistance may be displayed in the instrument panel. Several examples are provided below.

Symbol	Message	Meaning
€ ≙	Collision avoidance Automatic intervention	When the function is activated, a message will appear to alert the driver.
[]]i]	Windscreen sensor Sensor blocked, see Owner's manual	The camera's ability to detect the lane in front of the vehicle is reduced.

A text message can be erased by briefly pressing the O button in the center of the right-side steering wheel keypad.

If the message persists: Contact a workshop – an authorized Volvo workshop is recommended.

4.3.14. Symbols in the center display status bar

Overview of symbols displayed in the center display status bar.

The status bar shows current vehicle activities and in certain cases, also their status. Due to the limited space in the status bar, not all symbols will be displayed at all times.

Symbol	Meaning
	Connected to the Internet.
	Roaming activated.
	Cell phone network signal strength.
	Bluetooth device connected.
	Bluetooth activated but no device connected.
	Information sent to and from GPS.
	Connected to Wi-Fi network.
	Tethering activated (Wi-Fi hotspot). This means that the vehicle shares an available Internet connection.
	Vehicle modem activated.
	USB sharing active.
	Phone is wirelessly charging.
	Action in progress.
	Timer for preconditioning active. ^[1]
	Audio source being played.
	Audio source paused.
	Phone call in progress.
	Audio source muted.
	News broadcasts from current radio station. ^[2]
	Traffic information being received. ^[2]
	Clock.

^[1] Only hybrid models.

^[2] Not available in all markets.

4.3.15. Indicator and warning symbols

Indicator and warning symbols alert the driver that a function is active, that a symbol is working, or that an error or serious fault has occurred.

Red symbols

Ţ	WARNING The red warning symbol illuminates to indicate that a fault has been detected that could affect safety or driveability. An explanatory message will be simultane- ously displayed in the instrument panel. The warning symbol may also illuminate in combination with other symbols.
\bigstar	Seat belt reminder Lights up or flashes when a someone in the vehicle has not fastened their seat belt.
*	Airbags A fault has been detected in one of the vehicle's safety systems. Read the message in the instrument panel and contact a workshop. Volvo recommends contacting an authorized Volvo workshop.
(!) [1]	Fault in brake system A fault has occurred in the brake system. Read the message in the instrument panel and contact a workshop. Volvo recommends contacting an authorized Volvo workshop.
BRAKE	
(P) [1]	Parking brake Steady glow: the parking brake is activated. Flashing: a fault has occurred in the parking brake. Read the message in the instrument panel.
PARK	
E P	Fault in electrical system A fault has occurred in the electrical system. Read the message in the instrument panel and contact a workshop. Volvo recommends contacting an authorized Volvo workshop.
	High engine temperature The engine's temperature is too high. Read the message in the instrument panel.
	Collision risk City Safety warns the driver if there is a risk of a collision with another vehicle, pedestrian, cyclist or large animal.
9 <u>7</u> 71	Low oil pressure The engine's oil pressure is too low. Switch off the engine immediately and check the engine oil level. Add oil if necessary. If this symbol lights up and the oil level is normal, read the message in the instrument panel and contact a workshop. Volvo recommends contacting an autho- rized Volvo workshop.

Amber symbols

1	Information A problem has occurred in one of the vehicle's systems. Read the message in the instrument panel. The information symbol may also illuminate in combination with other symbols.
(1) BRAKE	Fault in brake system A fault has occurred in the brake system. Read the message in the instrument panel.
[2]	
(ABS) [1]	Fault in ABS system The system is not functioning properly. The vehicle's regular brakes will still work, but without the ABS function.
ABS [2]	
۲ ۲	Emission control system Fault in emission control system. Have the vehicle checked by a workshop. Volvo recommends contacting an authorized Volvo workshop.
() ≢	Rear fog light Rear fog light on.
<u>(!</u>)	Tire pressure system Tire pressure low. If there is a fault in the tire pressure system, the symbol will first flash for approximately 1 minute and then glow steadily. This may occur if the system cannot detect or alert the driver of low tire pressure as intended.
	Fault in headlight system A fault has occurred in the headlight system. Read the message in the instrument panel.
/\\	Lane Keeping Aid Lane Keeping Aid is alerting/intervening.
	Reduced performance Temporary fault in driveline. Read the message in the instrument panel.
22	Stability system Steady glow: a fault has occurred in the system. Flashing: the system is working.
E	Stability system, Sport mode Sport mode is activated.

Blue symbols

Active high beam Active high beam is activated and on.
High beams High beams on.

Green symbols

	Auto-hold brake The function is activated and the brakes or the parking brake are being used.
却	Front fog light Front fog light on.
ED OE	Parking lights on.
◆ ◆	Left/right turn signals Turn signal in use.

White/gray symbols

	Active high beam Active high beam is activated but not on.
<u> </u>	Preconditioning Engine and passenger compartment heater/air conditioning is preconditioning the vehicle.
/:\	Lane Keeping Aid White symbol: Lane Keeping Aid is on and lane marker lines are detected. Gray symbol: Lane Keeping Aid is on but no lane marker lines are detected.
T >	Rain sensor The rain sensor is activated.

^[1] Canadian models.

^[2] US models.

4.3.16. Parking climate symbols and messages

A number of symbols and messages related to parking climate may be displayed in the instrument panel.

Messages related to parking climate can also be displayed in a device that has the Volvo Cars app*.

Symbol	Message	Meaning
i	Parking climate Service required	Parking climate is not functioning properly. Contact a workshop ^[1] to have the system checked as soon as possible.
i	Parking climate Temporarily unavailable	Parking climate is temporarily not functioning properly. If the problem persists, contact a workshop ^[1] to have the system checked.
i	Parking climate Unavailable Charge level too low	The parking climate cannot be activated because the hybrid battery's charge level is too low to start the parking heater. Start the vehicle.
i	Parking climate Unavailable, not connected to power supply	The parking climate cannot be activated if the charging cable is not connected. Connect the charging cable.
i	Parking climate Limited Charge level too low	Parking climate will only run for a limited time when the hybrid battery's charge level is too low. Start the vehicle.

* Option/accessory.

^[1] An authorized Volvo workshop is recommended.

4.3.17. Hybrid symbols and messages in the instrument panel

A number of symbols and messages relating to hybrid operation may be displayed in the instrument panel. They may also appear in combination with general indicator and warning symbols and disappear when the necessary action has been taken.

Symbol	Message	Meaning
	12 V Battery Charging fault, service ur- gent. Drive to workshop	Fault in 12 V battery. Contact a workshop ^[1] to have the battery checked as soon as possible.
	12 V Battery Charging fault Stop safely	Fault in 12 V battery. Stop the vehicle as soon as possible and contact a workshop ^[1] to have the battery checked.
	12 V Battery Fuse failure Service required	Fault in 12 V battery. Contact a workshop ^[1] to have the system checked as soon as possible.
	HV battery Overheated, stop safely	The hybrid battery's temperature seems to be rising at an abnormal rate. Stop the vehicle and turn off the engine. Wait at least 5 minutes before driving. Call a workshop ^[1] or inspect the vehicle to make sure everything seems normal before continuing to drive.
	Reduced performance Max vehicle speed limited	The hybrid battery's charge level is too low for driving at high speeds. Charge the battery as soon as possible.
	Propulsion system Harsh behavior at low speed, vehicle ok to use	The hybrid system is not functioning properly. Contact a workshop ^[1] to have the system checked as soon as possible.
	Hybrid system failure Service required	The hybrid system is not functioning. Contact a workshop ^[1] to have the system checked as soon as possible.
ঽ	Charge cable Remove before start	Displayed when the driver attempts to start the vehicle with the charging cable still connected. Remove the charging cable and close the charger cover.

^[1] An authorized Volvo workshop is recommended.

4.3.18. Overheating of engine and transmission

In certain driving conditions, such as driving in mountainous areas or hot weather, there is an increased risk of the engine or drive system overheating, especially when carrying heavy loads.

- Engine power may be temporarily limited.
- Remove any auxiliary lights mounted in front of the grille when driving in hot weather.
- If the temperature in the engine's cooling system becomes too high, a warning symbol will appear in the instrument panel along with the message Engine temperature High temperature Stop safely. Pull over to a safe location and let the engine idle for a few minutes to cool down.
- If the message Engine temperature High temperature Turn off engine or Engine coolant Level low, turn off engine is displayed, stop the vehicle and turn off the engine.
- If the transmission begins to overheat, an alternative gear shifting program will be selected. An integrated protective function will also be activated, the warning symbol will illuminate and the message Transmission warm Reduce speed to lower temperature or Transmission hot Stop safely, wait for cooling will be displayed in the instrument panel. Follow the recommendations given by reducing speed or stopping the vehicle safely and letting the engine idle for a few minutes to let the transmission cool.
- If the vehicle begins to overheat, the air conditioning may be temporarily switched off.
- After a prolonged period of driving in demanding conditions, do not turn off the engine immediately after stopping.

(i) Note

It is normal for the engine's cooling fan to operate for a short time after the engine is switched off.

Symbols in the instrument panel

Symbol	Meaning
	High engine temperature. Follow the recommendations provided.
	Low coolant level. Follow the recommendations provided.
٥	Transmission hot/overheated/cooling. Follow the recommendations provided.

4.3.19. Automatic transmission symbols and messages

If a problem occurs with the transmission, a symbol and a message are displayed in the instrument panel.

(!) Important

Check the operating temperature of the transmission to help avoid damage to any of the drive system components. If there is a risk of overheating, a warning symbol will appear in the instrument panel and a text message will be displayed. Follow the recommendations given.

Symbol	Meaning
•	A fault has occurred in the transmission. Read the message in the instrument panel.
	Hot or overheated transmission. Read the message in the instrument panel.
	Temporary fault in driveline. Read the message in the instrument panel.

4.4. Voice control

4.4.1. Climate control system voice commands^[1]

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note. 206 / 1010 Voice control commands can be used for the climate control system to e.g. change temperature, activate seat heating* or change blower speed.

Tap (ℓ and say one of the following commands:

- "Climate" starts a command dialog for climate controls and provides examples of commands that can be used.
- "Set temperature to X degrees" sets desired temperature.
- "Raise temperature"/"Lower temperature" raises/lowers the set temperature.
- "Sync temperature" synchronizes the temperature for all climate zones in the vehicle with the temperature set for the driver's side.
- "Air on feet"/"Air on body" opens the desired air vent.
- "Air on feet off"/"Air on body off" closes the desired air vent.
- "Set fan to max"/"Turn off fan" changes blower speed to Max/Off.
- "Raise fan speed"/"Lower fan speed" raises/lowers the set blower speed.
- "Turn on auto" activates automatic climate control.
- "Air condition on"/"Air condition off" activates/deactivates air conditioning.
- "Recirculation on"/"Recirculation off" activates/deactivates air recirculation.
- "Turn on defroster "/"Turn off defroster" activates/deactivates window and door mirror defrosting.
- "Turn on max defroster"/"Turn off max defroster" activates/deactivates max defroster.
- "Turn on rear defroster"/"Turn off rear defroster" Activates/deactivates heated rear window and door mirrors.
- "Turn steering wheel heat on"/"Turn steering wheel heat off" activates/deactivates heated steering wheel*.
- "Raise steering wheel heat"/"Lower steering wheel heat" raises/lowers the level of steering wheel heating*.
- "Turn on seat heat"/"Turn off seat heat" activates/deactivates driver's seat heating*.
- "Raise seat heat"/"Lower seat heat" raises/lowers the level of driver's seat heating*.

(i) Note

Not all system languages support voice control. If a language supports voice control, it is marked with a \mathfrak{w} symbol in the list of available system languages. Read more about where the information is found in the section on voice control settings.

^[1] Certain markets only.

* Option/accessory.

4.4.2. Voice control for radio and media

Voice control commands for the radio and media player are shown below^[1].

Tap 🕪 and say one of the following commands:

- "Media" initiates a dialog for media and radio and displays examples of commands.
- "Play [artist]" plays music by the selected artist.
- "Play [song title]" plays the selected song.
- "Play [song title] from [album]" plays the selected song from the selected album.
- "Play [radio station]" starts the selected radio station.
- "Tune to [frequency]" tunes to the selected radio frequency in the currently active waveband. If no radio source is active, the FM band will be started as default.
- "Tune to [frequency] [waveband]" tunes to the selected radio frequency on the selected waveband.
- "Radio" starts FM radio.
- "Radio FM" starts FM radio.
- "SiriusXM" starts SiriusXM radio*
- "USB" starts playback from USB.
- "iPod" starts playback from iPod.
- "Bluetooth" starts playback from a Bluetooth-connected media source.
- "Similar music" plays music from a USB-connected device with music similar to that currently playing.

(i) Note

Not all system languages support voice control. If a language supports voice control, it is marked with a & symbol in the list of available system languages. Read more about where the information is found in the section on voice control settings.

^[1] Certain markets only.

* Option/accessory.

4.4.3. Voice control

Voice control^[1] allows you to control functions in the vehicle, e.g. the climate control system, radio or a Bluetooth-connected phone, using spoken commands. In vehicles equipped with Sensus Navigation*, the navigation system can also be controlled using voice commands.

What is voice control?

Voice control is a driver support function that can simplify the use of various functions in your vehicle. To use voice control, certain specific commands must be spoken. It can therefore be a good idea to familiarize yourself with how, and in what order, a voice command should be spoken to get the desired result.

You can control certain infotainment and climate control functions through the voice control system by using voice commands. The system can respond verbally and by displaying information in the instrument panel.

/ Warning

The driver is always responsible for ensuring that the vehicle is operated in a safe manner and that all applicable traffic regulations are followed.

Voice control microphone

System updates

The voice control system is continuously improved. It is recommended to always have the latest version installed.

Note Not all system languages support voice control. If a language supports voice control, it is marked with a *(c)* symbol in the list of available system languages. Read more about where the information is found in the section on voice control settings. ^[1] Certain markets only. * Option/accessory.

4.4.4. Using voice control

A number of functions in the vehicle can be controlled using your voice. Here is an introduction to using voice control and examples of different commands.

Starting voice control^[1]

Voice commands are given through a "dialog" with the voice control system. Press the button for voice control ((£) on the right-side steering wheel keypad to activate the system and initiate a voice command dialog. When you press the button, a beep will sound and the voice control symbol will appear in the instrument panel.

This shows that the system has begun listening and you can now begin speaking commands. As soon as you start speaking, the system will be trained to recognize and understand your voice. This takes several seconds and is done automatically, which means that you don't need to manually initiate any voice training.

These may include:

- Wait until after the tone, and then speak in your normal voice at a normal speed.
- Do not speak while the system is responding (the system is unable to process commands during this time).
- Avoid background noises in the passenger compartment by keeping doors, windows and the panoramic roof* closed.

(i) Note

Not all system languages support voice control. If a language supports voice control, it is marked with a \mathfrak{w} symbol in the list of available system languages. Read more about where the information is found in the section on voice control settings.

Generally, the system will listen for a basic command that is then followed by more detailed commands specifying what you want the system to do.

To change the audio volume of the system, turn the volume knob while the voice is speaking. It is possible to use other buttons while using voice control. However, because other audio is silenced during dialog with the system, it is not possible to perform any functions connected to audio using the buttons.

Canceling voice control

To cancel voice control, do one of the following:

- Briefly press (1) and say "Cancel".
- Press and hold the steering wheel keypad's voice control button
 until two audible signals are given. This cancels voice control even when the system is speaking.

Voice control will also be canceled if you do not respond during a dialog. The system will first ask three times for a response and if the response is still not given, voice control will be automatically canceled.

To speed up communication and skip prompts from the system, press the voice control button & on the steering wheel keypad. This will interrupt the system's response and you can say the next command.

Voice control examples

- 1 Tap (ビ.
- 2 Say "Call [First name] [Last name] [number category]", e.g. "Call Robyn Smith cellular".
- > The system will call the selected contact from the phone book. If the contact has several phone numbers (e.g. home, cell, work), the right category must also be given.

Commands/phrases

The following commands can usually be used in any situation:

- "Repeat" repeats the most recent voice command in the current dialog.
- "Cancel" cancels the dialog.^[2]

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note.

• "Help" - initiates a help dialog. The system responds with commands that can be used in the current situation, an instruction or an example.

Commands for specific functions, such as phone and audio, are described in the sections related to that function.

Numbers

Number commands can be given in different ways depending on the function to be controlled:

- **Phone numbers and zip codes** should be given by stating each number individually, e.g. "zero, three, one, two, two, four, four, three" (03122443).
- Addresses can be given by stating each number individually or in a group, e.g. "two, two" or "twenty-two" (22). For English and Dutch language settings, groups of numbers can also be said in sequence, e.g. "twenty-two, twenty-two" (22 22). For English, double or triple digits can also be used, e.g. "double zero" (00). Numbers in the range 0-2300 can be used.
- Frequencies can be given as "ninety-eight point eight" (98.8), "one hundred four point two" or "hundred and four point two" (104.2).

Speech rate and repeat mode

The speed at which the system speaks can be adjusted.

With repeat mode on, the system will repeat what you have said.

To change the speech rate or activate/deactivate repeat mode:

- 1 Tap Settings in the Top view.
- 2 Tap System → Voice Control and select settings.
 - Repeat Voice Command
 - Speech Rate

^[1] Certain markets only.

* Option/accessory.

^[2] Note that this only cancels the dialog when the system is not speaking. To cancel dialog while the system is speaking, press and hold & until you hear two beeps.

4.4.5. Updating voice control

Volvo is working constantly on improving voice control in your vehicle. You can download files yourself for updating your vehicle's voice control. Updating takes place in two stages using an empty USB memory.

Preparations

The new voice control files can be downloaded to an empty USB memory of at least 8 GB. The memory must have one of the following formats: FAT32, NTFS or exFAT.

Downloading

You can find current updates on the support site under the tab for downloading software. You access the information for the relevant vehicle by selecting your vehicle and model year. Click on the update you wish to perform and then follow the instructions below. Voice control files are downloaded using a program that is installed on your computer.

Instructions

- 1 Select the download link for either Windows or Mac, depending on which system you have.
- 2 Select Execute to install the download program.
- 3 Click New download to download the file to a USB memory.
- **4** You can verify that the download/copying to the USB memory has worked correctly before you install the file in the vehicle by repeating steps 1-2 and then pressing **Check downloads** in the download program.
- **5** Take the USB memory with the downloaded file to your vehicle and start the infotainment system.
- 6 Insert the USB memory in the USB port. If there are two USB ports, the second one must not be used at the same time.
- **7** The system automatically detects that an update is available and during the update the screen shows how much of the process remains, counted as a percentage.
- 8 When the installation is complete a notification is shown advising that the updated file is available after the next restart. The USB memory can now be removed.

If there are any problems with the update, contact your customer support or Volvo retailer.

Updating tips

- An update takes about half an hour and the infotainment system must be on. Use a battery charger or keep the vehicle's engine running while the update is in progress, for example during a trip.
- New voice control files for download are launched twice a year.

4.4.6. Tips for improving voice control

A few tips that might be useful to bear in mind when using voice control are listed.

If the voice control system does not respond as expected, this may be due to a variety of factors. Examples include:

• Ensure you are speaking in the language that is selected as system language and that your selected language is supported by voice control.

- Try saying "Help" for guidance on what it is possible to say using voice control. If you feel that the system doesn't understand what you are saying, it may be that the system doesn't support that phrase.
- Speak at a natural pace and using a normal conversational tone. Do not speak so slowly that the system does not understand you, it impairs recognition.
- Remember that in certain situations, the system must search a large database to give you the right feedback, in these situations, it is difficult to provide the exact right response. A list of possible answers is then presented in the vehicle's display.
- The voice control system in your vehicle is under continuous improvement. You can download update files yourself.

4.4.7. Voice control settings

Settings for the voice control system are made here^[1].

Settings → System → Voice Control

Settings can be personalized in the following areas:

- Repeat Voice Command
- Gender
- Speech Rate

Sound settings

Select sound settings under:

```
Settings -> Sound -> System Volumes -> Voice Control
```

Language settings

The voice control system is not available for all languages. The languages available for voice control are indicated by the & icon in the list of languages.

Changing the language here will also change the language in the menus, messages and help texts.

Settings $\rightarrow\,$ System $\,\rightarrow\,$ System Languages and Units $\,\rightarrow\,$ System Language

^[1] Certain markets only.

4.4.8. Voice control command list for the navigation system*

Several of the navigation system's functions can be activated with voice commands. Here is a list of these.

Tap $_{\texttt{w}} \varepsilon$ on the right-side steering wheel keypad and say one of the following commands:

- "Navigation" Starts a navigation dialog and displays examples of commands.
- "Take me home" Guidance is provided to the location set as Home.
- "Go to [city]" Inputs a city as a destination, e.g. "Go to San Francisco".
- "Go to [address]" Inputs an address as a destination. An address must contain city and street. e.g. "Go to Filbert Street 5, San Francisco".
- "Add intersection" Starts a dialog to input two streets. The destination will then be the intersection of these two streets.
- "Go to [zip code]" Input a zip code as the destination. e.g. "Go to 12345".
- "Go to [contact]" Input an address from the phone book as the destination. Example "Go to Robyn Smith"^[1].
- "Search [POI category]" Search Points of Interest (POI) in a certain category (e.g. restaurants)^[2]. To sort the list along the route, say "Along the route" when the list of results is displayed.
- "Search [POI category] i [city]" Searches for POIs in a certain category and city. The list of results is sorted based on the center point of the city. Example "Look for restaurant in San Francisco".
- "Search [POI name]". Example "Look for Zuni Café".
- "Change country/Change state^{[3],[4]}" Changes the search area for navigation.
- "Show favorites" Displays stored locations in the instrument panel.
- "Clear itinerary" Deletes all stored waypoints and destinations in an itinerary.
- "Repeat voice guidance" Repeats the most recent guidance instruction.
- "Turn off voice guidance" Guidance off.
- "Turn on voice guidance" Guidance on.

The following commands can usually be used in any situation:

- "Repeat" repeats the most recent voice command in the current dialog.
- "Help" initiates a help dialog. The system responds with commands that can be used in the current situation, an instruction or an example.
- It is possible to cancel voice control both when the system is quiet and when it is speaking.
 - "Cancel" cancels the dialog when the system is quiet.
 - Press and hold 👀 until two beeps sound cancels the dialog even if the system is speaking.

Addresses

When an address is entered, the search area is defined as the search area that is preset in the navigation system. You can change to another search area. If the new search area has a different language than the set system language, the system will automatically switch to another recognition engine. Because of this, the address should be given in the language used in the new search area.

(i) Note

Note that addresses are searchable only for the country or state the navigation system is set to. To search for addresses in another country or state, you must first change the search area.

(i) Note

Not all system languages support voice control. If a language supports voice control, it is marked with a \mathfrak{g} symbol in the list of available system languages. Read more about where the information is found in the section on voice control settings.

* Option/accessory.

^[1] For addresses to be found in the map database, they must be entered correctly in the phone book (without spelling mistakes, abbreviations, etc.). To check spelling, go to <u>wego.here.com [https://wego.here.com]</u>

^[2] The user can choose to call the POI or enter it as a destination.

- ^[3] For European countries, "country" is used instead of "state".
- ^[4] For Brazil and India, search area is changed in the center display.

4.4.9. Voice control for cellular phones
Call a contact in the phone book, have a text message read aloud or dictate short messages using voice control commands to a Bluetooth-connected phone.^[1]

To access a contact in the phone book, the voice control command must contain the contact information entered in the phone book. If a contact, e.g. **Robyn Smith**, has several phone numbers listed in the phone book, a number category such as **home** or **cellular** can also be specified, i.e. **"Call Robyn Smith cellular**".

Tap ⊮ € and say one of the following commands:

- "Call [contact]" call the selected contact from the phone book.
- "Call [phone number]" call a phone number.
- "Recent calls" display the list of recent calls.
- "Read message" read a text message aloud. If there are several messages, select the message to read aloud.
- "Message to [contact]" the user is prompted to speak a short message. The message will then be read aloud and the
 user can choose to send^[2] or re-dictate the message. The vehicle must be connected to the Internet to access this function.

(i) Note

Not all system languages support voice control. If a language supports voice control, it is marked with a & symbol in the list of available system languages. Read more about where the information is found in the section on voice control settings.

^[1] Certain markets only.

^[2] Not all phones can send messages via the vehicle.

4.4.10. Text message voice control

Voice control allows you to control functions in the vehicle, e.g. reading out text messages from a connected cellular phone.

Reading out text messages

0 140		annu funning
160		A
180	Read Message	ningini S
200	John Smith	
250		
260		

Settings and menus in the center display vary depending on software version.

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note. 218 / 1010 Before voice commands for the cellular phone's functions (text messages, phone calls and media player) can be used, a cellular phone must be connected to the vehicle.

To read out a text message, press the voice control button on the right-hand side of the steering wheel and say "Read message".

Reading out text messages from an iPhone

To read out text messages from an iPhone, you must change a setting in your phone so that messages can be sent from the phone to the vehicle.

- 1 Go to Settings.
- 2 Select Bluetooth.
- 3 Click on the info symbol (i) for the connection to your vehicle.
- 4 Turn on Show notes.

(i) Note

Not all system languages support voice control. If a language supports voice control, it is marked with a (c) symbol in the list of available system languages. Read more about where the information is found in the section on voice control settings.

4.4.11. Voice control for navigation system*

If your vehicle is equipped with Sensus Navigation, you can use voice control to control parts of your navigation system.

Start navigation

Here is an introduction to how you can begin using voice control to control the navigation system in your vehicle.

To activate a navigation command

- Press the steering wheel keypad's voice control button (1). 1
- > You can now give commands, e.g. "Navigation", which will start a navigation dialog and show examples of commands.

(i) Note

Not all system languages support voice control. If a language supports voice control, it is marked with a 😢 symbol in the list of available system languages. Read more about where the information is found in the section on voice control settings.

Using voice control to get route guidance to an address

To get directions to a specific address, use the command Go to followed by the address. It is important that the address is given in the right order. To use voice control for route guidance to an address, the address must be said in the following order: (1) street address, (2) house number, (3) city, as shown in the following example.

- Give the command Go to. 1
- You can now say the address you would like route guidance to.

220 / 1010

- Say the street, e.g. Lombard Street" 2
- Say the house number, e.g. "five" 3
- Say the city, e.g. "San Francisco" Δ
- The full command will then be: "Go to Lombard Street 5, San Francisco". Provided the address is found in the system, the navigation system will now provide route guidance to the address.

Using voice control for route guidance to an address in another country or another state

Your navigation system uploads sets of maps for the country or state it believes your vehicle is located in. This means that for accurate route guidance across country or state borders, you need to first tell the system in which country or state the address you would like route guidance to is located. You do this by using the command Change country or Change state. (Command Change state is primarily used in the US. In the example below, command Change country is used.)

- Give the command Change country. 1
- You can now enter the country in which the address you would like route guidance to is located, e.g. "Canada".
- Now enter the address you want route guidance to by following the procedure for "Using voice control for route guidance 2 to an address".
- > In this scenario, the full command is divided into two sub-commands:
 - 1. "Change country, Canada"
 - 2. "Go to Howe Street twenty-two, Vancouver"

If the address is found in the system, the navigation system will now provide route guidance to Howe Street twenty-two, Vancouver, Canada

(i) Note

After you have changed country, try to pronounce the address you want route guidance to in the destination country's language. This is required because the system automatically switches to the recognition language of the selected country.

Using voice control for route guidance to an address set as Home

If you have set an address as a Home location in your navigation system, you can use a voice command to receive route guidance to the location.

- Give the command Take me home. 1
- > If the navigation system has a home location saved, you will now receive route guidance to the location.

Using voice control for route guidance to a place, store or other specific business without inputting an exact address

Your navigation system can provide route guidance to specific places or types of businesses, which are referred to in the system as "points of interest" (POI^[1]). Examples of points of interest are restaurants, hotels, gas stations, museums and tourist attractions.

Use the command Search to search for a point of interest. You can search for a specific point of interest or for categories of points of interest.

(i)Note

It is important to use the right command for the option you would like route guidance for. When you want route guidance to a point of interest, use the Search command. The command is different for route guidance to specific addresses. Then you should use the **Go to** command instead.

Searching for a specific place or business

Here, [POI name] refers to a specific place or business (a point of interest), e.g. a hotel, a restaurant, a city park, etc.

- Give the command Search. 1
- You can now say the specific point of interest you would like route guidance to.
- Say [POI name], e.g. "Golden Gate Bridge" 2
- > The full command will then be: "Search Golden Gate Bridge". If the point of interest is found in the system, the navigation system will now provide route guidance to the location.

Searching for a point of interest category, e.g. stores, hotels, restaurants, museums or other tourist attractions or businesses.

Here, [POI category] refers to specific types of places or businesses (points of interest), e.g. hotels, restaurants, museums, etc.

- Give the command Search. 1
- You can now say the type of point of interest you would like to find and receive route guidance to.
- Say [POI category], e.g. "restaurant" 2
- > In this case, the full command will be: "Search restaurant". The navigation system will now search for restaurants around and in the vicinity of the vehicle and display a list of these in your instrument panel. The displayed list will provide suggestions from the system based on your command. Relevant categories and nearby results will be shown at the top of the list, followed by other suggestions in order of relevance.

Since we are looking for a category in this example, it may be a good idea to select the category option that most closely matches your search.

3 Select the category from the list that best matches what you searched for, in this case "restaurant(s)", by saying the row number shown in the instrument panel for that option.

222 / 1010

> You can now see your search results and select an option.

Using voice control to cancel route guidance

You can use voice commands to cancel route guidance, including all waypoints and the final destination.

- 1 Give the command Clear itinerary.
- > The navigation system will cancel route guidance and delete the final destination and all waypoints along the route.

Inputing zip codes and house numbers

Number commands can be given in different ways depending on the function to be controlled:

- **Zip codes** should be given by stating each number individually, e.g. "zero three one two two four four three" (03122443).
- Addresses can be given by stating each number individually or in a group, e.g. two two or twenty-two (22). For some languages, it is also possible to specify hundreds, e.g. 19 hundred 22 (1922). For English and Dutch language settings, groups of numbers can also be said in sequence, e.g. twenty-two twenty-two (22 22). For English, double or triple digits can also be used, e.g. double zero (00). Numbers in the range 0-2300 can be used.

Entering a destination using the phone book's list of contacts

You can use the command "Go to [contact]" to enter an address for a contact in the phone book as a destination. However, the address must be spelled correctly and entered without abbreviations in order to be found in the map database.

To check the spelling of addresses in HERE's database, go to wego.here.com [https://wego.here.com]

* Option/accessory.

^[1] Point Of Interest

4.5. Displays and controls by the driver in a left-hand drive vehicle

The overviews show the location of the vehicle's displays and controls.

Steering wheel and dashboard

- Parking lights, daytime running lights, low beams, high beams, turn signals, front fog lights/cornering illumination*, rear fog light, trip computer reset
- 2 Instrument panel
- 3 Wipers and washers, rain sensor*
- 4 Right-side steering wheel keypad
- **5** Steering wheel adjustment
- 6 Horn
- 7 Left-side steering wheel keypad
- 8 Display lighting, unlocking/locking*/closing* the trunk lid/tailgate

Ceiling console

- 1 Front reading lights and courtesy lighting
- 2 Panoramic roof*
- **3** Ceiling console display ON CALL button
- 4 HomeLink[®]*

Center and tunnel console

- 1 Center display
- 2 Start button
- 3 Hazard warning flashers, defrosting, media, drive mode button*
- 4 Electrical outlet, USB port, wireless phone charger*
- **5** Gear selector
- 6 Parking brake
- 7 Auto-hold brakes

Driver's door

- 1 Memory for power front seat*, door mirror settings
- 2 Central locking, power windows, door mirrors and child locks*
- 3 Hood open
- 4 Controls for front seat
- * Option/accessory.

5.1. Exterior lighting

5.1.1. Active Bending Lights*

Active Bending Lights (ABL) are designed to help provide extra illumination in curves and intersections. Depending on equipment level, vehicles with LED^[1] headlights* may be equipped with Active Bending Lights.

Headlight pattern with function deactivated (left) and activated (right).

Active Bending Lights follow the movement of the steering wheel to help provide extra illumination in curves and intersections, helping to improve visibility for the driver.

The function is automatically activated when the engine is started. If a fault is detected in the system, the $\overline{\bigcirc}$ symbol will illuminate in the instrument panel and a message will be displayed.

Active Bending lights are only activated in weak daylight or darkness or when the lighting ring on the steering wheel lever is in position AUTO. The vehicle must also be moving and have high beams or low beams on.

Deactivating/activating the function

The function is activated as the default factory setting and can be activated and deactivated in the center display's Function view:

Tap the Active Bending Lights button.

5.1.2. Active high beam

Active high beams is a function that uses camera sensors in the upper edge of the windshield to detect the headlights of approaching vehicles or the taillights of the vehicle directly ahead. When either of these is detected, the vehicle's headlights will automatically switch from high beams to low beams.

Active high beams is indicated by the \mathbf{E} symbol.

This function can be used in dark conditions when the vehicle's speed is approx. 20 km/h (approx. 12 mph) or higher. The function can also detect street lighting. When the camera sensor no longer detects an approaching vehicle or a vehicle ahead, the headlights will return to high beams after a second or two.

Activating active high beams

Active high beams can be activated and deactivated by turning the lighting ring on the left-side steering wheel lever to position Ξ^{C} . The lighting ring will then return to AUTO. When active high beams are activated, a white Ξ^{C} symbol will be displayed in the instrument panel. When high beams are on, the symbol will be blue.

If active high beams are deactivated when the high beams are on, the headlights will automatically switch to low beams.

Limitations for active high beams

The camera sensor on which the function is based has limitations.

If this symbol and the message **Active High Beam Temporarily unavailable** is displayed in the instrument panel, switching between high and low beams must be done manually.

The same applies if this symbol along with the message Windscreen sensor Sensor blocked, see Owner's manual is displayed. Active high beams may be temporarily unavailable in certain situations, e.g. heavy fog or rain. When active high beams become available again, or the windshield sensors are no longer blocked, the message will disappear and active high beams will be reactivated.

/ Warning

Automatic high beam is an aid in using the best possible light based on prevailing conditions.

The driver is always responsible for manually switching between high and low beam when traffic situations or weather conditions require this.

5.1.3. Using turn signals

The vehicle's turn signals are controlled using the left-side steering wheel lever. The turn signals flash three times or continuously, depending on how far up or down the lever is moved.

Turn signals.

Triple flash indicator

IV Nove the steering wheel lever up or down to the first position and release. The turn signals will flash three times. If the function is deactivated via the center display, the signals will flash once.

(i) Note

- This automatic flashing sequence can be interrupted by immediately moving the lever in the opposite direction.
- If the turn signal indicator flashes more quickly than normal, refer to the message in the instrument panel.

Continuous flashing sequence

An example 2 Move the lever up or down as far as possible.

The lever will stop in its end position and can be moved back manually or automatically by moving the steering wheel.

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note. 228 / 1010

5.1.4. Brake lights

The brake lights are automatically illuminated when braking.

The brake lights are illuminated when the brake pedal is depressed and when the brakes are automatically applied by a driver support system.

5.1.5. Rear fog light

The rear fog light is considerably brighter than ordinary taillights and should only be used to help other road users see the vehicle when visibility is reduced by conditions such as fog, snow, smoke or dust.

Rear fog light button.

The fog lights are located on the right and left sides of the rear of the vehicle.

The rear fog light can only be switched on when the ignition is in II mode and the lighting ring is in position AUTO or ID.

Press the button to switch on/off. The **()** symbol in the instrument panel illuminates when the rear fog light is on.

The rear fog light turns off automatically when the ignition is switched off or when the steering wheel lever lighting ring is in position 0 or 30 act.

(i) Note

Regulations concerning rear fog light use vary from country to country.

5.1.6. Front fog lights/corner illumination*

The fog lights can be activated manually when driving in fog and are activated automatically when backing up to help augment the backup light.

If the vehicle is equipped with corner illumination*, the fog lights are activated automatically in weak daylight or dark conditions to illuminate the area diagonally in front of the vehicle.

Front fog lights button.

The front fog lights can be turned on when the ignition is in mode || and the lighting ring is in position AUTO, D or DOC.

Tap the button to activate or deactivate the function. The \oplus symbol in the instrument panel comes on when the front fog lights are on.

The front fog lights turn off automatically when the ignition is switched off or when the lighting ring is in position 0.

(i) Note

Regulations concerning fog light use vary from country to country.

Cornering illumination*

The front fog lamps can include the cornering lights function, which temporarily illuminates the area diagonally in front of the car in the direction the steering wheel is turned on a sharp bend, or in the direction shown by the direction indicators.

The function is activated in weak daylight or dark conditions when the lighting ring is in AUTO or $\equiv D$ mode and the vehicle speed is less than about 30 km/h (about 20 mph).

Both cornering illumination are also illuminated as a complement to the taillights when reversing.

The function is activated as the default factory setting and can be activated and deactivated using the center display.

* Option/accessory.

5.1.7. Low beams

When driving with the lighting ring in the AUTO position, low beam will be automatically activated in weak daylight or dark conditions, when the ignition is in the II position.

Lighting ring in AUTO position.

With the lighting ring in the AUTO position, the low beams will also be automatically activated if the rear fog light is activated.

With the lighting ring in the *D* position, low beams will always be on when the ignition is in the *D* position.

Tunnel detection

The vehicle will detect if it enters a tunnel and shift from daytime running lights to low beams.

Note that the left-hand steering wheel lever must be in AUTO position for tunnel detection to work.

5.1.8. Using high beam

High beam is operated via the left-hand steering wheel lever. High beam is the vehicle's strongest lighting and should be used when driving in dark conditions, provided it does not blind other road users, to improve visibility.

Steering wheel lever with lighting ring.

High beam flash

🚺 Move the steering wheel lever slightly backward to the high beam flash mode. The high beams will illuminate until the lever is released.

High beams

Phe high beams can be activated when the lighting ring is in mode AUTO^[1] or D. Activate high beams by moving the steering wheel lever forward.

Deactivate by moving the steering wheel lever backward.

(i) Note
 When high beams are activated, they can be deactivated by moving the steering wheel lever back to either position 1 or
 B).

When the high beams are activated, the $\equiv O$ symbol will be illuminated in the instrument panel.

^[1] When the low beams are on.

5.1.9. Using home safe lighting

Some of the exterior lights remain on to illuminate the area around the vehicle. This is called home safe lighting.

To activate home safe lighting:

- **1** Switch off the ignition.
- 2 Push the left-side steering wheel lever toward the dashboard and release.
- **3** Exit the vehicle and lock the doors.
- A symbol in the instrument panel illuminates to indicate that the function is activated and exterior lighting switches on: Parking lights, headlights, license plate lighting and outer door handle lighting*.

The length of time home safe lighting remains illuminated can be set in the center display.

* Option/accessory.

5.1.10. Emergency brake lights

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note.

The emergency brake lights are activated to warn following vehicles of hard braking. This function causes an additional taillight on each side of the vehicle to illuminate.

The emergency brake lights are activated in the event of hard braking or if the ABS system is activated and the vehicle is traveling at a high speed.

After the driver decelerates to a low speed and then releases the brake, the brake lights resume their normal function and the lights go out.

5.1.11. Parking lights

The parking lights can be used to help other road users see the vehicle if it is stopped or parked. Use the lighting ring on the steering wheel lever to turn on the parking lights.

Lighting ring in the parking light position.

Turn the lighting ring to the ⋑⊄ position to turn on the parking lights (the license plate lighting will also illuminate).

Canadian models: If the ignition is in the II position, the daytime running lights will illuminate instead of the front parking lights. With the lighting ring in this position, the rear parking lights will remain on regardless of what position the ignition is in.

US models: When AUTO mode is selected, the daytime running lights can be deactivated in the center display. The parking lights will also be deactivated. In weak daylight or dark conditions, the parking lights and low beams will be illuminated.

In dark conditions, the rear parking lights also illuminate when the tailgate is opened to alert following traffic. This happens regardless of what position the lighting ring or ignition is in.

5.1.12. Welcome Light

Approach lighting is activated when the vehicle is unlocked and can be used to provide light as you walk toward the vehicle.

The function is activated when the vehicle is unlocked. The parking lights, ceiling lights, footwell lights and trunk/cargo compartment lights are activated in daylight conditions. In weak daylight or dark conditions, the license plate lighting and outer door handle lighting* will also be activated, with the light directed toward the ground.

If no door is opened, the lights will remain illuminated for approx. 2 minutes. If a door is opened while the function is activated, the interior lighting and outer door handle lighting* will remain on for a longer period of time.

This function can be activated and deactivated in the center display.

* Option/accessory.

5.1.13. Hazard warning flashers

Hazard warning flashers warn other road users by all of the vehicle's turn signals being activated at the same time. The function can be used to warn about a traffic hazard.

Hazard warning flashers button.

Press the button to activate the hazard warning flashers.

The hazard warning flashers are automatically activated in a collision.

Regulations concerning the use of hazard warning flashers may vary from country to country.

5.1.14. Daytime running lights

The vehicle has sensors that detect ambient lighting conditions. With the lighting ring in the AUTO position, the daytime running lights will always be activated when the ignition is in mode II. In weak daylight or dark conditions, the headlights automatically switch to low beams.

Lighting ring in AUTO position.

With the steering wheel lever's lighting ring in the AUTO position, the daytime running lights (DRL^[1]) will illuminate when the vehicle is driven in daylight conditions. The headlights will switch automatically from daytime running lights to low beams in weak daylight or dark conditions. The headlights will also switch to low beams if the front fog lights * and/or rear fog light are activated.

US models: When AUTO mode is selected, the daytime running lights can be deactivated in the center display. The parking lights will also be deactivated. In weak daylight or dark conditions, the parking lights and low beams will be illuminated.

US models: With the lighting ring in the 0 or ⋑⊂ position, the daytime running lights will be off.

Canadian models: With the lighting ring in the **0** or **EPOE** position, the daytime running lights will be on.

(i) Note

Volvo recommends use of Daytime Running Lights in the US. Its use is mandatory in Canada.

Warning

The system is an energy saving aid – it cannot in all situations determine when the daylight is too weak or not strong enough, e.g. when there is fog or rain.

The driver is always responsible for driving the vehicle with lighting that is safe for the traffic conditions and as specified by applicable traffic regulations.

^[1] Daytime Running Lights

* Option/accessory.

5.1.15. Location of exterior lights

The vehicle's exterior lighting consists of different bulbs. LED^[1] bulbs must be replaced by a workshop. An authorized Volvo workshop is recommended.

Front lights

- 1 Daytime running lights/position lamps/direction indicators (LED)
- 2 High beam (LED)
- 3 Low beam (LED)

5.1.17. Checking trailer lights*

When connecting a trailer, make sure that the trailer's lights are functioning before starting to drive.

Checking trailer lights*

Automatic check

When the trailer has been connected to the vehicle's electrical system, its lights can be checked by automatically activating them. This function helps the driver check that the trailer's lights are functioning correctly before starting to drive.

In order to perform this check, the vehicle must be switched off.

- 1 When a trailer is connected to the towbar, the message Automatic Trailer Lamp Check will appear in the instrument panel.
- **2** Acknowledge the message by pressing the O button on the right-side steering wheel keypad.
- > The light check will begin.
- 3 Get out of the vehicle to perform the check.

- > All of the lights on the trailer will begin flashing, and then illuminate separately one at a time.
- 4 Visually check that all of the trailer's lights are functioning correctly.
- 5 After a short time, all of the trailer's lights will start flashing again.
- > The light check is completed.

Disabling the automatic check

The automatic light check can be disabled in the center display.

- 1 Tap Settings in the Top view.
- 2 Tap My Car → Lights and Lighting.
- 3 Deselect Automatic Trailer Lamp Check.

Manual check

If the automatic check has been disabled, the check can be started manually.

- 1 Tap Settings in the Top view.
- 2 Tap My Car → Lights and Lighting.
- 3 Select Manual Trailer Lamp Check.
- > The light check will begin. Get out of the vehicle to perform the check.

Trailer rear fog light

When a trailer is connected, the vehicle's rear fog light may not illuminate and rear fog light functionality is instead transferred to the trailer. If this is the case, check to see if the trailer is equipped with a rear fog light before activating the vehicle's fog lights when driving with a trailer to help ensure safe operation.

Symbols and messages in the instrument panel

If one or more of the turn signals or brake lights on the trailer is not working, a symbol and message will be displayed in the instrument panel. The other lights on the trailer must be checked manually by the driver before the vehicle is driven.

Symbol	Message
	 Trailer turn indicator Right turn indicator malfunction Trailer turn indicator Left turn indicator malfunction
6	Trailer brake light Malfunction

If any of the trailer's turn signal lights is not working, the turn signal symbol in the instrument panel will also flash more quickly than normal.

* Option/accessory.

5.2. Interior lighting

5.2.1. Interior Lighting

The passenger compartment is equipped with several different types of lighting, e.g. general lighting, adjustable ambient lighting and reading lights.

All lighting in the passenger compartment can be turned on and off manually within 5 minutes after:

- the engine has been switched off and the ignition is in mode 0.
- the vehicle is unlocked but has not been started.

Front ceiling lighting

The controls in the ceiling console for the front reading lights and courtesy lighting.

- 1 Reading light left side
- 2 Passenger compartment lighting

4 Reading light right side

Reading lights

The reading lights on the right and left sides are switched on and off by briefly pressing the buttons in the ceiling console. To adjust the brightness, press and hold the button.

Passenger compartment lighting

Briefly press the button in the ceiling console to switch on or off the footwell lighting and ceiling lighting.

Courtesy lighting auto switch

Activate the auto switch by briefly pressing the AUTO button in the ceiling console. With Auto activated, the indicator light in the button and the courtesy lighting come on and are turned off as follows.

Courtesy lighting is switched on when:

- The vehicle is unlocked
- The vehicle is switched off
- A side door is opened.

Courtesy lighting is switched off when:

- The vehicle is locked
- The engine is started
- A side door is closed
- A side door has been open for approx. 2 minutes.

Rear ceiling lighting*

Reading lights are located in the rear section of the vehicle and can also be used as passenger compartment lighting.

In vehicles with panoramic roofs*, there are two lamp units, one on each side of the ceiling.

Briefly press the button on the light to turn on or off the reading lights. To adjust the brightness, press and hold the button.

Glove compartment lighting

The glove compartment lighting comes on or goes off when the glove compartment is opened or closed.

Vanity mirror lighting*

The vanity mirror lighting comes on or goes off when the cover over the mirror is opened or closed.

Ground lighting*

The ground lighting comes on or goes off when a door is opened or closed.

Cargo compartment lighting

The cargo compartment lighting comes on or goes off when the cargo compartment is opened or closed.

Ambient Lighting

The ambient lighting comes on when the doors are opened and goes out when the vehicle is locked. Ambient lighting brightness can be adjusted in the center display and also fine-tuned using the thumb wheel in the dashboard.

Mood lighting*

The vehicle is equipped with LEDs that provide faint lighting in various colors. This lighting is on when the engine is running. Mood lighting can be adjusted in the center display and also fine-tuned using the thumb wheel in the dashboard.

Lighting in the door storage compartments

Lighting in the door storage compartments comes on when the doors are opened and goes out when the vehicle is locked. The brightness can be adjusted using the thumb wheel in the dashboard.

241 / 1010

Lighting in the tunnel console's front cup holder*

The lighting in front console cup holders switches on when the vehicle is unlocked and off when the vehicle is locked. The brightness can be adjusted using the thumb wheel in the dashboard.

* Option/accessory.

5.2.2. Adjusting interior lighting

Illumination in the vehicle varies depending on ignition mode. The interior lighting can be adjusted with a thumb wheel in the dashboard and certain light functions can also be adjusted via the center display.

The thumb wheel on the dashboard to the left of the steering wheel can be used to adjust the brightness of the display lighting, instrument lighting, ambient lighting and mood lighting*.

Adjust ambient decor lighting

- 1 Tap **Settings** in the Top view in the center display.
- 2 Tap My Car \rightarrow Lights and Lighting \rightarrow Interior Lighting.
- **3** Choose from among the following settings:
 - Under Ambient Light Intensity, select Off, Low or High.
 - Under Ambient Light Level, select Reduced or Full.

Adjusting mood lighting*

The vehicle is equipped with several LEDs that provide faint lighting in various colors. This lighting is on when the engine is running.

Changing the brightness

- 1 Tap Settings in the Top view in the center display.
- 2 Tap My Car \rightarrow Lights and Lighting \rightarrow Interior Lighting \rightarrow Interior Mood Lighting.
- 3 Under Interior Mood Light Intensity, select Off, Low or High.

Changing the color of the light

- 1 Tap **Settings** in the Top view in the center display.
- 2 Tap My Car → Lights and Lighting → Interior Lighting → Interior Mood Lighting.
- Choose By Temperature or By Color to change the color of the light.
 If By Temperature is selected, the light will change according to the temperature set for the passenger compartment.
 If By Color is selected, the subcategory Theme Colors can be used to make further adjustments.

* Option/accessory.

5.3. Adjusting light functions via the center display

A number of light functions can be adjusted and activated via the center display. These include home safe lighting and approach lighting.

- 1 Tap Settings in the center display's Top view.
- 2 Tap My Car → Lights and Lighting.
- 3 Select Exterior Lights or Interior Lighting and then select the function that you would like to adjust.

5.4. Lighting control and panel

The lighting panel and controls can be used to adjust both exterior and interior lighting. The lighting ring on the left-side steering wheel lever can be used to activate and adjust the exterior lighting. The brightness of the interior lighting can be adjusted using the thumb wheel on the dashboard.

Exterior lighting

Lighting ring position.

When the vehicle's ignition is in mode II, the lighting ring positions have the following functions:

Position	Meaning
0	US: Daytime running lights and parking lights are off. Canada: Daytime running lights and parking lights are on. High beam flash can be used.
EDDE	Parking lights when the vehicle is parked. US: Daytime running lights are off. Canada: Daytime running lights are on. High beam flash can be used.

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note.

Position	Meaning
Ð	Low beams and parking lights. High beams can be activated. High beam flash can be used.
AUTO	Daytime running lights and parking lights in daylight conditions. ^[1] Low beams and parking lights in weak daylight or dark conditions or when the front fog lights* and/or rear fog light are activated. Active high beam can be activated. High beams can be activated when low beams are on. High beam flash can be used.
∎CA	Active high beams on/off.

(i) Note

Volvo recommends use of Daytime Running Lights in the US. Its use is mandatory in Canada.

Volvo recommends using position AUTO when the vehicle is in motion.

/!\ Warning

The vehicle lighting system cannot in all situations determine when the daylight is too weak or not strong enough, e.g. when there is fog or rain.

The driver is always responsible for driving the vehicle with lighting that is safe for the traffic conditions and as specified by applicable traffic regulations.

Thumbwheel in instrument panel

Thumb wheel (to the left) for adjusting interior brightness.

^[1] US models only: Daytime running lights and parking lights can be deactivated in the center display.

* Option/accessory.

6. Windows, glass and mirrors

6.1. Rearview and door mirrors

6.1.1. HomeLink[®] * ^[1]

HomeLink^{®[2]} is a programmable remote control integrated in the vehicle's electrical system.

It can remotely control up to three different devices, such as garage door openers or alarm systems, and thereby replace the remote controls for these.

The illustration is generic – the design may vary.

1 Programmable buttons

2 Indicator light

HomeLink[®] is integrated in the rearview mirror and consists of three programmable buttons and an indicator light in the mirror.

(i) Note

Save the original remote controls for future reprogramming (e.g. for use in another vehicle).

It is also advisable to delete the button programming if the vehicle is sold.

More information

Visit homelink.com or call 1-800-355-3515.

- * Option/accessory.
- ^[1] Certain markets only.

^[2] HomeLink and the HomeLink house symbol are registered trademarks of Gentex Corporation.

6.1.2. Rearview/door mirrors

The rearview mirror and door mirrors can be used to improve the driver's visibility behind the vehicle.

Rearview mirror

The rearview mirror is equipped with HomeLink*, auto-dim* and compass*.

The rearview mirror can be adjusted manually.

Door mirrors

. Warning

The door mirror on the passenger side is curved to improve visibility. Objects in the mirror may appear farther away than they actually are.

The joystick in the drivers' door control panel is used to adjust the position of the door mirrors.

There are also several automatic settings that can also be connected to the memory function buttons for the power seat*.

* Option/accessory.

6.1.3. Adjusting the door mirrors

To improve visibility to the rear, the door mirrors need to be adjusted to the driver's height and seating position.

There are several automatic settings that can also be connected to the memory function buttons for the power seat*.

Controls used for door mirrors

Door mirror controls.

The joystick in the drivers' door control panel is used to adjust the position of the door mirrors. The ignition must be in at least mode I.

- 1 Press the L button for the left door mirror or R for the right door mirror. The button will light up.
- **2** Adjust the position using the joystick located between the buttons.
- **3** Press the L or R button again. The light in the button will go out.

Automatically folding door mirrors*

The door mirrors can be automatically folded when driving or parking in tight spaces.

- 1 Press the L and R buttons at the same time.
- 2 Release the buttons after about 1 second. The mirrors will automatically stop when they are completely folded in.

Open the mirrors by pressing L and R at the same time. The mirrors will automatically stop when they reach the last-used setting.

Resetting the mirrors' position

A mirror that has been moved out of position manually (e.g. hit or bumped into) must be electrically returned to its original position for automatic folding* to function properly.

- **1** Fold in the mirrors by pressing the L and R buttons at the same time.
- **2** Open them again by pressing the L and R buttons at the same time.

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note.

248 / 1010

3 Repeat the above procedure as needed.

The mirrors return to their original positions.

Tilting when parking^[1]

The door mirrors can be tilted down to help give the driver a better view along the sides of the vehicle, e.g. of the curb when parking.

1 Select reverse gear and press the L or R mirror button.

Note that the button needs to be pressed twice. When the door mirror is tilted down, the light in the button will flash. When reverse gear is selected, the door mirrors automatically begin to return to their original positions.

Automatically tilting when parking^[1]

With this setting, the door mirrors will automatically tilt down when reverse gear is engaged. The folded position is preset and cannot be adjusted.

- 1 Tap Settings in the center display's Top view.
- 2 Tap My Car → Mirrors and Convenience.
- 3 Under Exterior Mirror Tilt at Reverse, select Off, Driver, Passenger or Both to activate/deactivate and to select which mirror to tilt.

To immediately return the door mirrors to their original position, press the ${\sf L}$ or ${\sf R}$ button twice.

Automatic folding when the vehicle is locked*

In the center display, you can set the door mirrors to retract/extend automatically when the vehicle is locked/unlocked with the key.

- 1 Tap **Settings** in the center display's Top view.
- 2 Tap My Car → Mirrors and Convenience.
- 3 Select Fold Mirror When Locked to activate/deactivate.

(i) Note

If the door mirrors are folded in manually using the L and R buttons and then the vehicle is locked, the mirrors will not automatically fold out when the vehicle is unlocked, even if this preference has been set. The door mirrors must be folded out manually using the L and R buttons.

* Option/accessory.

^[1] Only on models equipped with a power driver's seat with memory buttons*.

6.1.4. Adjusting the rearview mirror dimming function

Bright light entering the vehicle from behind, e.g. from the headlights of following vehicles, could reflect in the rearview mirror and door mirrors and cause a glare. Use the dimming function when light from behind is distracting.

Auto-dim

If bright light enters the vehicle from behind, the door mirrors will automatically dim when it is dark outside or when lighting conditions are low, for example when driving in tunnels. Auto-dim is always active when the engine is running, except when reverse gear is engaged.

(i) Note

Adjustments to the sensitivity level will not be noticeable immediately but will instead take effect after a short period of time.

The sensitivity level for dimming will affect both the rearview mirror and door mirrors.

To change the dimming sensitivity level:

- 1 Tap Settings in the Top view in the center display.
- 2 Tap My Car → Mirrors and Convenience.
- 3 Under Rearview Mirror Auto Dimming, select Normal, Dark or Light.

Dimming is automatically adjusted via the light sensors in the rearview mirror.

For the door mirrors to be equipped with auto-dim, the rearview mirror must also be equipped with auto-dim.

6.1.5. Using stored positions for seats and mirrors

If the positions for the power* seat and door mirrors have been stored, they can be activated using the memory buttons.

Using a stored position

A stored position can be used with the front door open or closed:

Front door open

1 Briefly press one of the memory buttons 1 (2) or 2 (3). The power seats and door mirrors will move and stop at the positions stored in that button.

Front door closed

1 Press and hold one of the memory buttons (1 (2) or 2 (3) until the seat and door mirrors stop in the positions stored in that memory button.

If the memory button is released, the seat and door mirrors will stop moving.

- This list point needs to be translated exactly to: "Because the driver's seat can be adjusted with the ignition off, children should never be left unattended in the vehicle.
- Movement of the seat can be STOPPED at any time by pressing any button on the power seat control panel.
- Do not adjust the seat while driving.
- The seat should be adjusted so that the brake pedal can be depressed fully. In addition, position the seat as far rearward as comfort and control allow.
- The seat rails on the floor must not be obstructed in any way when the seat is in motion.

* Option/accessory.

6.1.6. Storing positions for seats and mirrors

Adjustment settings for the power* seat and door mirrors can be stored in the memory buttons.

Two different positions for the power* seat and the door mirrors can be stored using the memory buttons. The buttons are located on the inside of either one or both* front doors.

1 Button **M** for storing a setting.

- **2** Memory button.
- 3 Memory button.

Storing positions

- 1 Adjust the seat and door mirrors to the desired position.
- ${\bf 2}$ $\,$ Press and hold the ${\rm M}$ button. The indicator light in the button will illuminate.
- **3** Within three seconds, press and hold the 1 or 2 button.

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note.
> When the position has been stored in the memory button, an audio signal will sound and the indicator light in the M button will go out.

If none of the memory buttons are pressed within three seconds, the M button will go out and no position will be stored.

The seats or door mirrors must be readjusted before a new memory position can be set.

* Option/accessory.

6.1.7. Activating and deactivating the heated rear window and door mirrors

The heated rear window and door mirrors are used to quickly remove condensation and ice from the glass.

Activating and deactivating the heated rear window and door mirrors from the center console

A button in the center console offers quick access to the heated rear window and door mirrors functions.

Button in center console.

- 1 Tap the button.
- > Heated windows and door mirrors are activated and the button lights up/goes out.

Activating and deactivating the heated rear window and door mirrors from the center

display

Tap the symbol in the center of the climate bar to open Climate view in the center display.

Tap Rear.

> Heated windows and door mirrors are activated and the button lights up/goes out.

6.1.8. Automatically activating and deactivating the heated rear window and door mirrors

The heated rear window and door mirrors are used to quickly remove condensation and ice from the glass.

It is possible to select whether rear window and door mirror heating should be automatically activated or deactivated when the engine is started. With automatic start activated, heating will be activated when there is a risk of ice or condensation on the windows or mirrors. Heating is automatically switched off when the window or door mirror is sufficiently warm and the condensation or ice is gone.

- 1 Tap Settings in the Top view in the center display.
- 2 Tap Climate.
- 3 Select Auto Rear Defroster to activate/deactivate automatic rear window and door heating.

6.2. Windshield and rear window

6.2.1. Damaged windshield

It is important to repair a damaged windshield as soon as possible. Minor damage due to e.g. stone chips can often be repaired without replacing the entire windshield. Volvo recommends contacting an authorized Volvo workshop if the windshield is damaged.

Minor glass damage

If possible, repair the damage within 24 hours to help prevent it from worsening. If the windshield has minor damage, a windshield stone chip sticker can help protect the damaged area from dust and dirt until it can be repaired.

Major glass damage

In the event of major damage to the windshield, the entire windshield must be replaced.

√ Warning

Do not drive the vehicle if there is major damage to the windshield. The damage can quickly worsen, obscuring the driver's view and preventing the vehicle from being driven safely.

Replacing a windshield

It is important that the new windshield and its installation comply with Volvo's specifications for safety and compatibility with the vehicle's functions. Volvo recommends contacting an authorized Volvo workshop for windshield replacements.

6.2.2. Wiper blades and washer fluid

The wipers and the washer fluid are designed to improve visibility and the headlight pattern.

The washer nozzles are heated * automatically in cold weather to prevent the washer fluid from freezing.

When there is approximately 1 liter (1 qt) of washer fluid remaining, a message to refill will appear in the instrument panel.

* Option/accessory.

6.2.3. Using automatic rear window wiping when backing up

If reverse gear is engaged while the windshield wipers are on, the rear window wipers will start. This function is deactivated when a different gear is selected.

- 1 Tap Settings in the Top view in the center display.
- 2 Tap My Car → Wipers.

3 Select Auto Rear Wiper to activate/deactivate automatic rear window wiping when backing up.

If the rear window wipers are already in continuous wiper mode, no change will be made when reverse gear is engaged.

(i) Note

At low ambient temperatures, the automatic rear window wiper when backing up is switched off to help prevent damage to the wiper arm.

6.2.4. Using the rear window wiper/washer

The rear window washer/wiper is designed to clean the rear window. Use the right-side steering wheel lever to start and control the wiper/washer.

Activating the rear window wiper/washer

1 Select 🛱 for interval rear window wiper.

2 Select \square for continuous rear window wiper.

1 Move the right-side steering wheel lever forward to wash/wipe the rear window.

6.2.5. Using the rain sensor

The rain sensor monitors the amount of water on the windshield and automatically starts the windshield wipers. Rain sensor sensitivity can be adjusted using the thumb wheel on the right-hand steering wheel lever.

Right-hand steering wheel lever.

- 1 Rain sensor button
- 2 Thumb wheel, sensitivity/interval wiper speed

When the rain sensor is activated, the $\,\,\mathfrak{V}\,$ rain sensor symbol will be displayed in the instrument panel.

Activating the rain sensor

When the rain sensor is activated, the windshield wipers must be in position 0 or in the single sweep position.

Activate the rain sensor by pressing the rain sensor button \mathcal{P} .

Move the lever downward for an extra wiper sweep.

Turn the thumb wheel upward for increased sensitivity and downward for decreased sensitivity. The wipers will make one extra sweep when the thumb wheel is turned upward.

Deactivate the rain sensor

Deactivate the rain sensor by pressing the 💬 rain sensor button or moving the lever upward to another wiper mode.

The rain sensor is automatically deactivated when the vehicle is switched off.

The rain sensor is also automatically deactivated when the wiper blades are put in the service position. The rain sensor will reactivate when service mode is switched off.

() Important

The windshield wipers may start inadvertently and be damaged in automatic car washes. Switch off the rain sensor before washing the vehicle. The symbol in the instrument panel will go out.

6.2.6. Activating and deactivating the rain sensor's memory function

The rain sensor monitors the amount of water on the windshield and automatically starts the windshield wipers.

When the memory function is activated, the rain sensor button does not need to be pressed every time the vehicle is started:

- 1 Tap Settings in the center display's Top view.
- **2** Tap My Car \rightarrow Wipers.
- 3 Select Rain Sensor Memory to activate/deactivate the memory function.

6.2.7. Using the windshield and headlight washers

The windshield and headlight washers are designed to clean the windshield and headlights. Use the right-side steering wheel lever to start the windshield and headlight washers.

Starting the windshield and headlight washers

Washing function, right-hand steering wheel lever.

- 1 Move the right-side steering wheel lever toward the steering wheel to start the windshield washers.
- > After the lever is released, the wipers make several extra sweeps.

(!) Important

Avoid activating the washer system when it is frozen or the fluid reservoir is empty. Otherwise, there is a risk of damaging the pump.

Headlight washer*

The headlights are cleaned automatically according to a defined interval when the windshield washers are activated. The headlights are only washed if high or low beam is on.

Reduced washing

When there is about 1 liter (1 qt) of washer fluid left in the reservoir and the Washer fluid Level low, refill message is displayed in the instrument panel together with the symbol, the washer fluid supply to the headlights is cut off. This is to prioritize windshield cleaning and visibility through it.

* Option/accessory.

6.2.8. Using the windshield wipers

The windshield wipers are designed to clean the windshield. The right-side steering wheel lever is used to adjust windshield wiper settings.

Right-hand steering wheel lever.

1 The thumb wheel is used to set rain sensor sensitivity and interval wiper speed.

Single sweep

✓ Move the lever down and release for a single sweep.

Wipers off

0 Move the lever to position 0 to turn off the windshield wipers.

Interval wipers

Move the lever upward to put the wipers in interval wiping mode. Set the number of sweeps per time unit with the thumb wheel when interval wipers are selected.

Continuous wipers

- Move the lever upward for the wipers to operate at normal speed.
- Move the lever upward again for the wipers to operate at high speed.

(!) Important

Before activating the wipers, make sure that the wiper blades are not frozen in place and that any snow or ice on the windshield and rear window has been scraped away.

6.2.9. Activating and deactivating the heated rear window and door mirrors

The heated rear window and door mirrors are used to quickly remove condensation and ice from the glass.

Activating and deactivating the heated rear window and door mirrors from the center console

A button in the center console offers quick access to the heated rear window and door mirrors functions.

Button in center console.

1 Tap the button.

> Heated windows and door mirrors are activated and the button lights up/goes out.

Activating and deactivating the heated rear window and door mirrors from the center display

Tap the symbol in the center of the climate bar to open Climate view in the center display.

Tap Rear.

> Heated windows and door mirrors are activated and the button lights up/goes out.

6.2.10. Automatically activating and deactivating the heated rear window and door mirrors

The heated rear window and door mirrors are used to quickly remove condensation and ice from the glass.

It is possible to select whether rear window and door mirror heating should be automatically activated or deactivated when the engine is started. With automatic start activated, heating will be activated when there is a risk of ice or condensation on the windows or mirrors. Heating is automatically switched off when the window or door mirror is sufficiently warm and the condensation or ice is gone.

- 1 Tap Settings in the Top view in the center display.
- 2 Tap Climate.
- 3 Select Auto Rear Defroster to activate/deactivate automatic rear window and door heating.

6.3. Door windows and panoramic roof

6.3.1. Power windows

Every door has a control panel for the power windows. The driver's door has controls for operating all windows and for activating the child safety locks.

Driver's door control panel.

- Electric child safety locks* that deactivate the controls in the rear doors to prevent the doors or windows from being opened from the inside.
- 2 Rear window controls.
- **3** Front window controls.

/ Warning

Children, other passengers or objects can be trapped by the moving parts.

- Always operate the windows with caution.
- Do not allow children to play with the operating controls.
- Never leave a child alone in the vehicle.
- Remember to always cut the current to the power windows by setting the vehicle's electrical system to ignition mode 0 and then taking the key with you when leaving the vehicle.
- Never stick objects or body parts out through the windows, even if the vehicle electrical system is completely turned off.

* Option/accessory.

6.3.2. Operating the power windows

All power windows can be operated using the control panel in the driver's door. The control panels in the other doors can be used to operate that particular door.

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note.

262 / 1010

The power windows have pinch protection. If there is any problem with the pinch protection, a rest procedure can be tested.

/ Warning

Children, other passengers or objects can be trapped by the moving parts.

- Always operate the windows with caution.
- Do not allow children to play with the operating controls.
- Never leave a child alone in the vehicle.
- Remember to always cut the current to the power windows by setting the vehicle's electrical system to ignition mode 0 and then taking the key with you when leaving the vehicle.
- Never stick objects or body parts out through the windows, even if the vehicle electrical system is completely turned off.

Operating the power windows.

- Operating manually. Move one of the controls slightly up or down. The power windows go up or down while the control is held in position.
- Operating with automatic controls. Move one of the controls up or down to its end position and release it. The window moves automatically to its fully closed/open position.

To use the power windows, the ignition must be in at least mode | or ||. After the ignition has been switched off, the power windows can be operated for several minutes or until a door is opened. Only one control can be operated at a time.

It can also be operated using keyless opening* with the door handle.

/ Warning

Make sure that no child or other passenger comes into contact with the windows as they are closing with keyless closing*.

(i) Note

One way to reduce the pulsating wind noise heard when the rear windows are open is to also open the front windows slightly.

(i) Note

The windows cannot be opened at speeds over approx. 180 km/h (ca 112 mph), but they can be closed.

The driver is always responsible for following applicable traffic regulations.

(i) Note

It may not be possible to operate the windows in low temperatures.

* Option/accessory.

6.3.3. Panoramic roof*

The panoramic roof is divided into two glass sections. The front section can be opened vertically at the rear edge (ventilation position) or horizontally (open position). The rear section cannot be moved. The panoramic roof has a wind deflector and sun curtain made of perforated fabric (located beneath the glass sections) for extra protection in e.g. bright sunlight.

The panoramic roof and sun curtain are operated using the controls in the ceiling.

To operate the panoramic roof and sun curtain, the ignition must be in mode | or ||.

/! Warning

Children, other passengers or objects can be trapped by the moving parts.

- Always operate the windows with caution.
- Do not allow children to play with the operating controls.
- Never leave a child alone in the vehicle.
- Remember to always cut the current to the power windows by setting the vehicle's electrical system to ignition mode 0 and then taking the key with you when leaving the vehicle.
- Never stick objects or body parts out through the windows, even if the vehicle electrical system is completely turned off.

! Important

- Do not open the panoramic roof when load carriers are installed.
- Never place heavy objects on the panoramic roof.

() Important

- Remove ice and snow before opening the panoramic roof. Be careful not to scratch any surfaces or damage the trim.
- Do not operate the panoramic roof if it is frozen in place.

Wind blocker

The panoramic roof is equipped with a wind blocker that folds up when the roof is open.

* Option/accessory.

6.3.4. Operating the panoramic roof*

The panoramic roof and sun curtain are operated using a control in the ceiling panel, and both are equipped with pinch protection.

/ Warning

Children, other passengers or objects can be trapped by the moving parts.

- Always operate the windows with caution.
- Do not allow children to play with the operating controls.
- Never leave a child alone in the vehicle.
- Remember to always cut the current to the power windows by setting the vehicle's electrical system to ignition mode 0 and then taking the key with you when leaving the vehicle.
- Never stick objects or body parts out through the windows, even if the vehicle electrical system is completely turned off.

(! Important

- Do not open the panoramic roof when load carriers are installed.
- Never place heavy objects on the panoramic roof.

() Important

- Remove ice and snow before opening the panoramic roof. Be careful not to scratch any surfaces or damage the trim.
- Do not operate the panoramic roof if it is frozen in place.

To operate the panoramic roof and sun curtain, the ignition must be in mode | or ||.

It can also be operated using keyless opening * with the door handle.

/ Warning

Make sure that no child or other passenger comes into contact with the windows as they are closing with keyless closing*.

() Important

Check that the panoramic roof is properly closed when closing.

The movement of the roof will stop if the control is released during manual operation or when the glass has reached the comfort^[1] or fully open/closed position. The movement of both the panoramic roof and the sun curtain is also stopped if the control in the ceiling is operated again in the direction opposite that of the current direction of movement.

The panoramic roof and sun curtain are also equipped with pinch protection. If there is any problem with the pinch protection, a rest procedure can be tested.

(i) Note

For manual opening, the sun curtain must be completely open before the panoramic roof can be opened. For the reverse procedure, the panoramic roof must be completely closed before the sun curtain can be completely closed.

(i) Note

It may not be possible to operate the windows in low temperatures.

Opening and closing the panoramic roof to ventilation position using the control in the ceiling

Ventilation position, rear edge raised.

- 1) Open by pushing the control upward once.
- Close by pushing the control downward once.

When ventilation mode is selected, the rear edge of the front section of the roof is raised. If the sun curtain is fully closed when ventilation position is selected, it will automatically open approx. 50 mm (approx. 2 inches).

If the panoramic roof is closed from the ventilation position, the sun curtain will also automatically close.

Fully opening and closing the panoramic roof with the control in the ceiling

- Deration, manual mode
- 2 Operation, automatic mode

Manual operation

- **1** To open the sun curtain, pull the control backward to the manual open mode.
- **2** To open the panoramic roof to the comfort position, pull the control backward a second time to the manual opening position.
- **3** To open the panoramic roof fully, pull the control backward a third time to the manual opening position.

Close by repeating the above procedure in reverse - push the control forward/down to the manual closing position.

Auto operation

- 1 To open the sun curtain to the fully open position, pull the control backward to the auto open mode and release.
- **2** To open the panoramic roof to the comfort position, pull the control backward a second time to the automatic opening position and release.
- 3 To open the panoramic roof fully, pull the control backward a third time to the automatic opening position and release.

Close by repeating the above procedure in reverse - push the control forward/down to the auto close position.

Automatic operation - rapid opening or closing

The panoramic roof and sun curtain can be opened or closed simultaneously:

- Open press the control backward twice to the automatic operation position and release. 1
- 1 Close press the control forward/down twice to the automatic operation position and release.

* Option/accessory.

^[1] The comfort position is a position which helps keep wind and resonance sounds to a comfortably low level.

6.3.5. Auto closing the panoramic roof* sun curtain

With this function, the sun curtain closes automatically 15 minutes after the vehicle has been locked if it is parked in hot weather. This is done to lower the passenger compartment temperature and protect the upholstery against being bleached by the sun.

The function is deactivated as the default factory setting and can be activated or deactivated using the center display.

- Tap Settings in the Top view in the center display. 1
- 2 Tap My Car → Locking.

Select Auto Close Sunroof Curtain to activate/deactivate.

(i) Note

The sun curtain also closes when all windows are closed with keyless closing*.

* Option/accessory.

6.4. Windows, glass and mirrors

The vehicle is equipped with several different types of windows, glass and mirrors. Some of the windows in the car are laminated.

269 / 1010

The windshield has laminated glass. Laminated glass is also available as on option for some other glass surfaces. Laminated glass is reinforced, which provides better protection against break-ins and improved soundproofing in the passenger compartment.

The panoramic roof* also has laminated glass.

The symbol shows the windows containing laminated glass.^[1]

* Option/accessory.

^[1] Does not apply to windshield and panoramic roof*, which are always laminated and therefore do not have this symbol.

6.5. Pinch protection for windows and sun curtains

All power windows and sun curtains * have a pinch protection function that is triggered if anything blocks them while they are opening or closing.

If pinch protection is activated, movement will stop and then retract automatically to approx. 50 mm (2 inches) from the point at which it was blocked (or to full ventilation position).

It is still possible to override pinch protection when closing is interrupted (e.g. due to ice) by pressing and holding down the control in the same direction.

If there is any problem with the pinch protection, a rest procedure can be tested.

· Warning

If the starter battery is disconnected, the function for automatic opening and closing must be reset to function correctly. A reset is required in order for the pinch protection to work.

* Option/accessory.

6.6. Reset procedure for pinch protection

If you experience any problems with the electrical functions for the power windows, you can try to perform a reset.

/ Warning

If the starter battery is disconnected, the function for automatic opening and closing must be reset to function correctly. A reset is required in order for the pinch protection to work.

Consult a workshop^[1] if you experience any problems with the panoramic roof.

Resetting a power window

- 1 Start with the window in the closed position.
- 2 Then move the control in manual mode three times upward toward the closed position.
- > The system will be automatically activated.

If the problem persists, contact a workshop.

^[1] An authorized Volvo workshop is recommended.

6.7. Activating and deactivating max defroster

Max defroster is used to quickly remove condensation and ice from windows.

Max defroster deactivates automatic climate control and air recirculation, activates the air conditioning, and changes blower speed to 5 and temperature to HI.

(i) Note

The volume increases when the blower speed is changed to 5.

When max defroster is deactivated, the climate system reverts to the previous settings.

Activating and deactivating max defroster from the center console

A button in the center console offers quick access to the max defroster.

Button in center console.

- 1 Tap the button.
- > Max defroster is activated/deactivated and the button lights up/goes out.

Activating and deactivating max defroster from the center display

Tap the symbol in the center of the climate bar to open Climate view in the center display.

Тар Мах.

> Max defroster is activated/deactivated and the button lights up/goes out.

7.1. Front seat

7.1.1. Climate controls for front seat

7.1.1.1. Activating and deactivating power front seats*

The seats can be heated for added comfort for the driver and passengers in cold weather.

Tap the left- or right-side steering wheel and seat button in the center display's climate bar to open the controls for steering wheel and seat heating.

If the vehicle is not equipped with ventilated seats or heated steering wheel (for the driver's side), the button for seat heating is directly accessible in the climate bar.

Tap the seat heating button repeatedly to select one of the four levels: Off, High, Medium or Low.

> The level is changed and the set level is displayed in the button.

Varning

Heated seats should not be used by people who have difficulty detecting temperature increases due to nerve damage or numbness or who for another reason may have difficulty operating the controls for seat heating.

* Option/accessory.

7.1.1.2. Activating and deactivating the heated front seat*

The seats can be heated for added comfort for the driver and passengers in cold weather.

Seat heating can be set to automatically activate when the engine is started. When set to automatically activate, heating will be turned on at low ambient temperatures.

- Tap Settings in the Top view in the center display. 1
- Tap Climate. 2
- 3 Select Auto Driver Seat Heating Level and Auto Passenger Seat Heating Level to activate/deactivate automatic start of heated driver's and passenger seat.
- > An "A" will be displayed next to the relevant seat heating button in the climate bar when auto start has been activated.
- Select Low, Medium or High to select level after the function has been activated. 4
- * Option/accessory.

7.1.1.3. Setting the blower speed for the front seats^[1]

The blower can be set to several different automatically controlled speeds for the front seat.

Tap the symbol in the center of the climate bar to open Climate view in the center display.

Blower control buttons in Climate view.

Tap the desired blower speed: Off, 1-5 or Max.

> The blower speed will be changed and the buttons for the set speed will light up.

() Important

The air conditioning will not engage if the blower is turned off completely, which may cause fogging on the inside of the windows.

(i) Note

The climate system automatically adapts airflow as needed within the set blower speed, which means that airflow speed may vary slightly within the same blower speed.

^[1] The same setting applies to the rear seats with the 2-zone climate system.

7.1.1.4. Setting the temperature for the front seats^[1]

The temperature can be set to the desired number of degrees for the front seat climate zones.

Temperature buttons in the climate bar.

Tap the left- or right-side temperature buttons in the center display's climate bar to open the control.

2

Temperature control.

Set the temperature by doing one of the following:

- dragging the control to the desired temperature, or
- tapping +- to raise/lower the temperature. •
- > The temperature will be set and the button will display the new temperature.

(i) Note

Heating/cooling cannot be accelerated by choosing a higher/lower temperature than the desired temperature.

^[1] The same setting applies to the rear seats with the 2-zone climate system.

7.1.1.5. Synchronize temperature

The temperature in the different climate zones of the vehicle can be synchronized with the temperature set for the driver's side.

Synchronization button on the driver's side temperature control.

Tap the driver's side temperature button in the center display's climate bar to open the control.

- 2 Tap Synchronize temperature.
- > The temperature for all of the vehicle's climate zones will be synchronized with the one set for the driver's side and the synchronization symbol will be displayed next to the temperature button.

Synchronization is stopped with another press on **Synchronize temperature** or by changing the temperature setting for a climate zone other than the driver's.

7.1.2. Memory function for front seat

7.1.2.1. Using stored positions for seats and mirrors

If the positions for the power* seat and door mirrors have been stored, they can be activated using the memory buttons.

Using a stored position

A stored position can be used with the front door open or closed:

Front door open

1 Briefly press one of the memory buttons 1 (2) or 2 (3). The power seats and door mirrors will move and stop at the positions stored in that button.

Front door closed

1 Press and hold one of the memory buttons (1 (2) or 2 (3) until the seat and door mirrors stop in the positions stored in that memory button.

If the memory button is released, the seat and door mirrors will stop moving.

/ Warning

- This list point needs to be translated exactly to: "Because the driver's seat can be adjusted with the ignition off, children should never be left unattended in the vehicle.
- Movement of the seat can be STOPPED at any time by pressing any button on the power seat control panel.
- Do not adjust the seat while driving.
- The seat should be adjusted so that the brake pedal can be depressed fully. In addition, position the seat as far rearward as comfort and control allow.
- The seat rails on the floor must not be obstructed in any way when the seat is in motion.
- * Option/accessory.

7.1.2.2. Storing positions for seats and mirrors

Adjustment settings for the power* seat and door mirrors can be stored in the memory buttons.

Two different positions for the power* seat and the door mirrors can be stored using the memory buttons. The buttons are located on the inside of either one or both* front doors.

- 1 Button **M** for storing a setting.
- 2 Memory button.
- 3 Memory button.

Storing positions

- 1 Adjust the seat and door mirrors to the desired position.
- 2 Press and hold the M button. The indicator light in the button will illuminate.
- **3** Within three seconds, press and hold the 1 or 2 button.
- > When the position has been stored in the memory button, an audio signal will sound and the indicator light in the M button will go out.

If none of the memory buttons are pressed within three seconds, the ${\mathbb M}$ button will go out and no position will be stored.

The seats or door mirrors must be readjusted before a new memory position can be set.

* Option/accessory.

7.1.3. Front seats

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note. 279 / 1010 The seat has a number of setting options to increase comfort.

7.1.4. Power* front seats

The front seats can be adjusted in a number of different ways to help enhance your seating comfort. The power seat can be moved forward/backward and up/down. The front edge of the seat cushion can be raised/lowered and the tilt of the backrest can be adjusted. Lumbar support* can be adjusted up/down/forward/rearward. The length of the seat cushion can be adjusted manually*.

The seats can be adjusted when the vehicle is running and for a certain period of time after the door has been unlocked without the vehicle running. They can also be adjusted for a short period after the vehicle is turned off.

Important (!)

The power seats have an overload protector that is triggered if a seat is blocked by any object. If this occurs, remove the object and attempt to adjust the seat again.

* Option/accessory.

7.1.5. Adjusting the power* front seats

Set the desired seating position using the controls on the front seat cushion. Activate lumbar support* by pressing the four-way control.

- 1 Activate and use the lumbar support control by pressing the four-way control upwards/downwards/forwards/backwards.
- **2** Raise/lower the front edge of the seat cushion by moving the control up/down.
- **3** Raise/lower the seat by moving the control up/down.
- 4 Move the seat forward/rearward by moving the control forward/rearward.

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note.

280 / 1010

5 Change the backrest tilt by moving the control forward/backward.

Only one movement (forward/rearward/up/down) can be performed at a time.

The front seat backrests cannot be folded down completely.

- 1 The head restraint can be adjusted up or down by pressing the button and manually moving the head restraint to the desired position.
- * Option/accessory.

7.1.6. Manual front seats

The front seats can be adjusted in a number of different ways to help enhance your seating comfort.

- 1 Move the seat forward/backing by lifting the handle and moving the seat to a suitable distance from the steering wheel and pedals. Check to make sure the seat is securely locked into place after its setting has been changed.
- **2** Change the length of the seat cushion * by pulling up the lever and moving the cushion forward/backward.
- ³ Raise/lower the front edge of the seat cushion * by moving the control up/down.^[1]
- 4 Adjust lumbar support* by pressing the button up/down/forward/rearward.

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note. 281 / 1010

- **5** Raise/lower the seat by moving the lever up/down.
- 6 Change the backrest tilt by turning the knob on the backrest.

1 The head restraint can be adjusted up or down by pressing the button and manually moving the head restraint to the desired position.

/! Warning

- Do not adjust the seat while driving. The seat should be adjusted so that the brake pedal can be depressed fully. In addition, position the seat as far rearward as comfort and control allow.
- Check that the seat is securely locked into position after adjusting.

* Option/accessory.

^[1] Only applies to the driver's seat.

7.1.7. Adjusting* front seat cushion length

The length of the seat cushion can be adjusted to increase comfort.

Control for adjusting seat cushion.

- **1** Grasp the **1** handle on the front of the seat and pull upward.
- **2** Adjust the length of the seat cushion.
- **3** Release the handle and make sure the seat cushion locks into position.

* Option/accessory.

7.1.8. Adjusting front seat lumbar support*

Use the control on the side of the seat cushion to adjust the lumbar support.

The four-way button is located on the side of the seat cushion.

Four-way lumbar support is adjusted using the four-way button (the round one) located on the side of the seat cushion. The lumbar support can be adjusted forward/backward and up/down.

Adjusting lumbar support

- Press the four-way button up **1**/down **3** to move the lumbar support upward/downward.
- Press the front part 4 of the four-way button to increase lumbar support.
- Press the rear part 2 of the four-way button to decrease lumbar support.
- * Option/accessory.

7.2. Rear seat

7.2.1. Climate controls for rear seat

7.2.1.1. Activating and deactivating the heated rear seats*

The seats can be heated for added comfort for the passengers in cold weather.

Activating and deactivating the heated rear seats from the rear seat

Buttons for seat heating on the rear side of the tunnel console.

Press repeatedly on the left or right seat heating buttons on the rear side of the tunnel console to select one of four levels: **Off, High, Medium** or **Low.**

> The level is changed and the indicator lights in the button display the level.

Heated seats should not be used by people who have difficulty detecting temperature increases due to nerve damage or numbness or who for another reason may have difficulty operating the controls for seat heating.

* Option/accessory.

7.2.2. Rear seat

The vehicle has five seats. The rear seat is divided into two folding sections. One section has two seating positions and the other has one seating position.

7.2.3. Adjusting the rear seat head restraints

Adjust the center head restraint in the rear seat to the seat occupant's height. Fold down the outboard head restraints * to improve rear visibility.

Adjusting the center seat head restraint

The center head restraint should be adjusted to suit the passenger's height. The entire back of the head should be covered if possible. Manually move the restraint up or down as needed.

To lower the restraint, push and hold the button (see illustration) while carefully lowering the head restraint.

The center seat head restraint must be in its lowest position when the seat is not occupied. When the center seat is occupied, the head restraint must be correctly adjusted to the passenger's height, covering the entire back of the head if possible.

Folding the rear seat outboard head restraints using the center display*

The outer head restraints can be folded via the center display's function view. The head restraint can be folded down when the vehicle is in ignition mode 0.

Tap the Headrest Fold button to activate folding.

Manually push the head restraint until it clicks into position.

Do not lower the head restraint if there are passengers in any of the rear seats.

/ Warning

The head restraint must be locked in the upright position after it has been folded up.

* Option/accessory.

7.2.4. Folding down the rear seat backrests

The rear seat backrest is split into two sections. The two sections can be folded forward individually.

/ Warning

- Adjust the seat and ensure it locks into position before driving. Use caution when adjusting the seat. Uncontrolled or careless adjustments could lead to injury.
- Long objects must always be securely tied down to help prevent injury or damage in the event of sudden braking.
- Always turn off the vehicle and apply the parking brake when loading or unloading the vehicle.
- Put the gear selector in P to help prevent the gear selector from being inadvertently moved.

(!) Important

When the backrest is folded down, make sure there are no objects in the rear seat, and the seat belts are not buckled. Otherwise there is a risk of damage to the upholstery.

(!) Important

The armrest* in the center seat must be raised before the seat backrest is folded down.

The ski hatch* must be closed before the seat backrest is folded down.

(i) Note

The front seats may need to be pushed forward and the backrest adjusted so that the rear seat backrests can be fully lowered.

Folding down the backrests

The vehicle must be stationary and at least one of the rear doors must be open before a backrest can be folded down.

Make sure that the rear seat is unoccupied and that there are no objects on the seat.

1 🕩

Fold down the center seat's head restraint manually.
2 😫

Pull the handle in the vehicle's left or right rear seat backrest forward to fold down the left or right section of the rear seat.

3 The backrest lock will release and the backrest will automatically fold down to the horizontal position.

Folding up the backrest

To fold up the backrest to the upright position manually:

- Move the backrest upward/rearward. 1
- Press the backrest until it locks into position. 2
- Fold up the head restraints manually. 3
- Adjust the center head restraint if necessary. Δ

Warning

When the backrest is restored to an upright position, the red indicator should no longer be visible. If it is still visible, the backrest is not locked in place.

/!\ Warning

Make sure that the rear seat backrest and head restraint are locked securely in place after the seat is folded up.

The head restraints at the outer seats must always be raised when there is a passenger in one of these spots of the rear seat.

* Option/accessory.

7.2.5. Rear seat ski hatch*

The hatch in the rear seat backrest can be opened to transport long, narrow objects such as skis.

- 1 In the cargo compartment, grasp the ski hatch handle and pull it down.
- **2** Fold down the armrest in the rear seat.
- **3** Adjust the center seat head restraint upwards so the steel tubes do not block the opening.

If the private locking function is used, the ski hatch must be closed.

* Option/accessory.

7.3. Steering wheel

7.3.1. Speed-dependent steering wheel resistance

Speed-dependent power steering increases the steering wheel resistance in pace with the vehicle's speed, which can help give the driver an enhanced feeling of control and stability. Steering is stiffer on highways. When parking and at low speeds, it will be easier to move the steering wheel.

Reduced power

In rare situations, the power steering may need to work at reduced power and the steering wheel may then feel more difficult to move. This may happen when the power steering becomes too hot and needs to be temporarily cooled. It can also happen if there is a disturbance in power supply.

If there is reduced power, the message **Power steering Assistance temporarily reduced** and this symbol are shown in the instrument panel.

While the power steering is working at reduced power, the driver support functions and systems with steering assistance are not available.

If the temperature rises too high, the power steering may be forced to switch off completely. In such a situation, the driver display shows the message **Power steering failure Stop safely** along with a symbol.

Changing the level of steering wheel resistance*

In INDIVIDUAL drive mode, the level of steering wheel resistance can be adjusted.

- 1 Tap Settings in the center display's Top view.
- 2 Select My Car → Drive Modes → Steering Force.

Steering wheel resistance settings can only be accessed if the vehicle is stationary or is moving straight ahead at a low speed.

* Option/accessory.

7.3.2. Steering wheel controls and horn

The steering wheel has a horn and controls for e.g. driver support systems and voice control.

Steering wheel keypads and paddles*.

- **1** Driver support system controls.^[1]
- **2** Paddle* for manually shifting gears (automatic transmission).
- **3** Controls for voice control, accessing menus and messages, and handling phone calls.

Horn

The horn is located in the center of the steering wheel.

* Option/accessory.

^[1] Cruise Control, Adaptive Cruise Control*, Distance Alert* and Pilot Assist.

7.3.3. Adjusting the steering wheel

The steering wheel can be adjusted to various positions.

The steering wheel's reach and height can be adjusted.

Adjust the steering wheel and ensure it locks into position before driving. Never adjust the steering wheel while driving.

Steering wheel adjuster lever.

- Move the lever forward to release the steering wheel. 1
- Adjust the steering wheel to the desired position. 2
- Pull the lever back to lock the steering wheel into place. If the lever is difficult to move, press or lift the steering wheel 3 lightly while pulling the lever.

7.3.4. Activating and deactivating the heated steering wheel*

The steering wheel can be heated for added comfort in cold weather.

Tap the driver's side steering wheel and seat button in the climate bar in the center display to open the controls for steering wheel and seat heating.

If the vehicle is not equipped with heated or ventilated seats, the button for steering wheel heating is directly accessible in the climate bar.

Tap the steering wheel heating button repeatedly to select one of the four levels: Off, High, Medium or Low.

> The level is changed and the set level is displayed in the button.

* Option/accessory.

7.3.5. Activating and deactivating automatic steering wheel heating*

The steering wheel can be heated for added comfort in cold weather.

Steering wheel heating can be set to automatically activate when the engine is started. When set to automatically activate, heating will be turned on at low ambient temperatures.

- 1 Tap Settings in the Top view in the center display.
- 2 Tap Climate.
- 3 Select Auto Steering Wheel Heating Level to activate/deactivate automatic start of heated steering wheel.
- > An "A" will be displayed next to the heated steering wheel button in the climate bar when auto start has been activated.
- 4 Select Low, Medium or High to select level after the function has been activated.

* Option/accessory.

8.1. Climate controls

8.1.1. Climate controls for passenger compartment

8.1.1.1. Activating auto climate control

If auto climate control is activated, several climate system functions are controlled automatically.

Tap the symbol in the center of the climate bar to open Climate view in the center display.

- 2 Tap or press and hold AUTO Climate.
 - Tap air recirculation, air conditioning and air distribution are controlled automatically.
 - Press and hold air recirculation, air conditioning and air distribution are controlled automatically. Temperature and blower speed are changed to standard settings: 22 °C (72 °F) and speed 3.
- > Auto climate mode is activated and the button lights up.

(i) Note

It is possible to change the temperature and blower speed without deactivating automatic climate control. Automatic climate control is deactivated when the air distribution is changed manually or when the max defroster is activated.

8.1.1.2. Setting the blower speed for the front seats^[1]

The blower can be set to several different automatically controlled speeds for the front seat.

Tap the symbol in the center of the climate bar to open Climate view in the center display.

Blower control buttons in Climate view.

Tap the desired blower speed: Off, 1-5 or Max.

> The blower speed will be changed and the buttons for the set speed will light up.

(!) Important

The air conditioning will not engage if the blower is turned off completely, which may cause fogging on the inside of the windows.

(i) Note

The climate system automatically adapts airflow as needed within the set blower speed, which means that airflow speed may vary slightly within the same blower speed.

^[1] The same setting applies to the rear seats with the 2-zone climate system.

8.1.1.3. Activating and deactivating air conditioning

The air conditioning cools and dehumidifies incoming air as needed.

When the air conditioning is activated, it will be switched on and off automatically by the climate system as needed.

Tap the symbol in the center of the climate bar to open Climate view in the center display.

Tap AC.

> Air conditioning is activated/deactivated and the button lights up/goes out.

(i) Note

The air conditioning cannot be activated when the fan speed is set to Off.

8.1.1.4. Activating and deactivating recirculation

The climate system's recirculation function helps shut out smog, smoke, exhaust fumes, etc. by reusing the air in the passenger compartment.

Tap the symbol in the center of the climate bar to open Climate view in the center display.

Tap **Recirc**.

> Air recirculation is activated/deactivated and the button lights up/goes out.

(!) Important

If the air in the vehicle is recirculated too long, there is a risk of fogging on the inside of the windows.

i Note

Recirculation cannot be activated when the max defroster is on.

8.1.1.5. Activating and deactivating the recirculation timer setting

The climate system's recirculation function helps shut out smog, smoke, exhaust fumes, etc. by reusing the air in the passenger compartment.

When the recirculation timer is activated, air recirculation will switch off automatically after 20 minutes.

- 1 Tap Settings in the Top view in the center display.
- 2 Tap Climate.
- 3 Tap Recirculation Timer to activate/deactivate the recirculation timer.

8.1.1.6. Setting the temperature for the front seats^[1]

The temperature can be set to the desired number of degrees for the front seat climate zones.

1

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note.

Temperature buttons in the climate bar.

Tap the left- or right-side temperature buttons in the center display's climate bar to open the control.

Temperature control.

Set the temperature by doing one of the following:

- dragging the control to the desired temperature, or
- tapping +- to raise/lower the temperature.
- > The temperature will be set and the button will display the new temperature.

(i) Note

Heating/cooling cannot be accelerated by choosing a higher/lower temperature than the desired temperature.

^[1] The same setting applies to the rear seats with the 2-zone climate system.

8.1.1.7. Synchronize temperature

The temperature in the different climate zones of the vehicle can be synchronized with the temperature set for the driver's side.

Synchronization button on the driver's side temperature control.

Tap the driver's side temperature button in the center display's climate bar to open the control.

- 2 Tap Synchronize temperature.
- > The temperature for all of the vehicle's climate zones will be synchronized with the one set for the driver's side and the synchronization symbol will be displayed next to the temperature button.

Synchronization is stopped with another press on **Synchronize temperature** or by changing the temperature setting for a climate zone other than the driver's.

8.1.1.8. Adjusting air distribution

Air distribution can be adjusted manually if needed.

Tap the symbol in the center of the climate bar to open Climate view in the center display.

Air distribution buttons in Climate view.

1 Air distribution - windshield defrost vents

2 Air distribution - dashboard and center console air vents

3 Air distribution - floor air vents

Tap one or more air distribution buttons to open/close the airflow for that vent.

> The air distribution changes and the buttons will light up or go out.

8.1.2. Climate controls for seats and steering wheel

8.1.2.1. Activating and deactivating the heated steering wheel*

The steering wheel can be heated for added comfort in cold weather.

Tap the driver's side steering wheel and seat button in the climate bar in the center display to open the controls for steering wheel and seat heating. If the vehicle is not equipped with heated or ventilated seats, the button for steering wheel heating is directly accessible in the climate bar.

2

Tap the steering wheel heating button repeatedly to select one of the four levels: Off, High, Medium or Low.

> The level is changed and the set level is displayed in the button.

* Option/accessory.

8.1.2.2. Activating and deactivating automatic steering wheel heating*

The steering wheel can be heated for added comfort in cold weather.

Steering wheel heating can be set to automatically activate when the engine is started. When set to automatically activate, heating will be turned on at low ambient temperatures.

- 1 Tap Settings in the Top view in the center display.
- 2 Tap Climate.
- 3 Select Auto Steering Wheel Heating Level to activate/deactivate automatic start of heated steering wheel.
- > An "A" will be displayed next to the heated steering wheel button in the climate bar when auto start has been activated.
- 4 Select Low, Medium or High to select level after the function has been activated.

* Option/accessory.

8.1.2.3. Activating and deactivating the heated rear seats*

The seats can be heated for added comfort for the passengers in cold weather.

Activating and deactivating the heated rear seats from the rear seat

Buttons for seat heating on the rear side of the tunnel console.

Press repeatedly on the left or right seat heating buttons on the rear side of the tunnel console to select one of four levels: **Off, High, Medium** or **Low.**

> The level is changed and the indicator lights in the button display the level.

Heated seats should not be used by people who have difficulty detecting temperature increases due to nerve damage or numbness or who for another reason may have difficulty operating the controls for seat heating.

* Option/accessory.

8.1.2.4. Activating and deactivating power front seats*

The seats can be heated for added comfort for the driver and passengers in cold weather.

Tap the left- or right-side steering wheel and seat button in the center display's climate bar to open the controls for steering wheel and seat heating. If the vehicle is not equipped with ventilated seats or heated steering wheel (for the driver's side), the button for seat heating is directly accessible in the climate bar.

2

Tap the seat heating button repeatedly to select one of the four levels: Off, High, Medium or Low.

> The level is changed and the set level is displayed in the button.

· Warning

\}}}

Heated seats should not be used by people who have difficulty detecting temperature increases due to nerve damage or numbness or who for another reason may have difficulty operating the controls for seat heating.

* Option/accessory.

8.1.2.5. Activating and deactivating the heated front seat*

The seats can be heated for added comfort for the driver and passengers in cold weather.

Seat heating can be set to automatically activate when the engine is started. When set to automatically activate, heating will be turned on at low ambient temperatures.

- 1 Tap Settings in the Top view in the center display.
- 2 Tap Climate.
- 3 Select Auto Driver Seat Heating Level and Auto Passenger Seat Heating Level to activate/deactivate automatic start of heated driver's and passenger seat.
- > An "A" will be displayed next to the relevant seat heating button in the climate bar when auto start has been activated.
- 4 Select Low, Medium or High to select level after the function has been activated.

* Option/accessory.

8.1.3. Climate controls for windows and mirrors

8.1.3.1. Activating and deactivating the heated rear window and door mirrors

The heated rear window and door mirrors are used to quickly remove condensation and ice from the glass.

Activating and deactivating the heated rear window and door mirrors from the center console

A button in the center console offers quick access to the heated rear window and door mirrors functions.

Button in center console.

- Tap the button. 1
- > Heated windows and door mirrors are activated and the button lights up/goes out.

Activating and deactivating the heated rear window and door mirrors from the center display

Tap the symbol in the center of the climate bar to open Climate view in the center display.

306 / 1010

> Heated windows and door mirrors are activated and the button lights up/goes out.

8.1.3.2. Automatically activating and deactivating the heated rear window and door mirrors

The heated rear window and door mirrors are used to quickly remove condensation and ice from the glass.

It is possible to select whether rear window and door mirror heating should be automatically activated or deactivated when the engine is started. With automatic start activated, heating will be activated when there is a risk of ice or condensation on the windows or mirrors. Heating is automatically switched off when the window or door mirror is sufficiently warm and the condensation or ice is gone.

- 1 Tap Settings in the Top view in the center display.
- 2 Tap Climate.
- 3 Select Auto Rear Defroster to activate/deactivate automatic rear window and door heating.

8.1.3.3. Activating and deactivating max defroster

Max defroster is used to quickly remove condensation and ice from windows.

Max defroster deactivates automatic climate control and air recirculation, activates the air conditioning, and changes blower speed to 5 and temperature to HI.

(i) Note

The volume increases when the blower speed is changed to 5.

When max defroster is deactivated, the climate system reverts to the previous settings.

Activating and deactivating max defroster from the center console

A button in the center console offers quick access to the max defroster.

Button in center console.

- 1 Tap the button.
- > Max defroster is activated/deactivated and the button lights up/goes out.

Activating and deactivating max defroster from the center display

Tap the symbol in the center of the climate bar to open Climate view in the center display.

Тар Мах.

> Max defroster is activated/deactivated and the button lights up/goes out.

8.1.4. Climate system controls

The climate system functions are controlled from physical buttons on the center console, the center display, and the climate panel on the rear side of the tunnel console*.

Physical buttons in the center console

1 Button for max defroster.

2 Button for heated rear window and door mirrors.

Climate bar in the center display

The most common climate system functions can be controlled from the climate bar.

1 Temperature controls for driver and passenger side.

2 Controls for heated * and ventilated * driver and front passenger seat, as well as heated steering wheel *.

3 Button for opening Climate view. The graphic in the button shows activated climate system settings.

Climate view in the center display

Tap the symbol in the center of the climate bar to open Climate view.

Depending on equipment level, Climate view may be divided into several tabs. Toggle between the tabs by swiping the screen to the left/right or by tapping the desired heading.

Main climate

In addition to the functions in the climate bar, other main climate system functions can be controlled from the Main climate tab.

1 Max, Rear – Controls for defrosting windows and door mirrors.

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note. 310 / 1010

- 2 AC Air conditioning controls.
- **3 Recirc** Air recirculation controls.
- 4 Air distribution controls.
- 5 Blower control.
- 6 AUTO Automatic climate control.

Parking climate*

Parking climate functions can be controlled from the Parking climate tab.

Climate controls on the rear side of the tunnel console*

If the vehicle is equipped with heated rear seats*, there are physical buttons on the rear side of the tunnel console to control this function.

* Option/accessory.

8.2. Air distribution

8.2.1. Activating and deactivating recirculation

The climate system's recirculation function helps shut out smog, smoke, exhaust fumes, etc. by reusing the air in the passenger compartment.

Tap the symbol in the center of the climate bar to open Climate view in the center display.

Tap Recirc.

> Air recirculation is activated/deactivated and the button lights up/goes out.

(!) Important

If the air in the vehicle is recirculated too long, there is a risk of fogging on the inside of the windows.

i Note

Recirculation cannot be activated when the max defroster is on.

8.2.2. Activating and deactivating the recirculation timer setting

The climate system's recirculation function helps shut out smog, smoke, exhaust fumes, etc. by reusing the air in the passenger compartment.

When the recirculation timer is activated, air recirculation will switch off automatically after 20 minutes.

- 1 Tap Settings in the Top view in the center display.
- 2 Tap Climate.
- 3 Tap Recirculation Timer to activate/deactivate the recirculation timer.

8.2.3. Activating and deactivating max defroster

Max defroster is used to quickly remove condensation and ice from windows.

Max defroster deactivates automatic climate control and air recirculation, activates the air conditioning, and changes blower speed to 5 and temperature to HI.

The volume increases when the blower speed is changed to 5.

When max defroster is deactivated, the climate system reverts to the previous settings.

Activating and deactivating max defroster from the center console

A button in the center console offers quick access to the max defroster.

Button in center console.

- 1 Tap the button.
- > Max defroster is activated/deactivated and the button lights up/goes out.

Activating and deactivating max defroster from the center display

Tap the symbol in the center of the climate bar to open Climate view in the center display.

Тар Мах.

> Max defroster is activated/deactivated and the button lights up/goes out.

8.2.4. Air distribution

The climate system distributes incoming air through a number of vents in the passenger compartment.

Automatic and manual air distribution

When the auto-climate feature is on, air distribution is regulated automatically. Air distribution can also be controlled manually.

Adjustable air vents

Certain air vents in the vehicle are adjustable, which means they can be opened/closed and the direction of the air flow from the vent can be adjusted.

Location of adjustable air vents in the passenger compartment.

1 Four on the dashboard and two on the rear side of the tunnel console.

(i) Note

At low ambient temperatures, no air is distributed from the adjustable air vent nozzles at the rear of the tunnel console.

8.2.5. Adjusting air distribution

Air distribution can be adjusted manually if needed.

Tap the symbol in the center of the climate bar to open Climate view in the center display.

2

Air distribution buttons in Climate view.

1 Air distribution - windshield defrost vents

2 Air distribution - dashboard and center console air vents

3 Air distribution - floor air vents

Tap one or more air distribution buttons to open/close the airflow for that vent.

> The air distribution changes and the buttons will light up or go out.

8.2.6. Air distribution options

Air distribution can be adjusted manually if needed. The following options are available.

	Air distribution	Purpose
نر *	If all air distribution buttons are deselected in manual mode, the clima	te control system will revert to automatic mode.
*	Main airflow from defroster vents. Some airflow from other vents.	Helps remove ice and condensation in cold and humid weather (blower speed should not be set too low).
* ≠	Main airflow from dashboard vents. Some airflow from other vents.	Provides effective cooling in warm weather.
*	Main airflow from floor vents. Some airflow from other vents.	Provides heating or cooling in footwell areas.
* 🖵	Main airflow from defroster and dashboard vents. Some airflow from other vents.	Provides a comfortable climate in warm and dry weather.
*	Main airflow from defroster and floor vents. Some airflow from other vents.	Provides a comfortable climate and effective defogging in cold and humid weather.
* 👉	Main airflow from dashboard and floor vents. Some airflow from other vents.	Provides a comfortable climate in sunny, cool weather.
* 🔁	Main airflow from defroster, dashboard and floor vents.	Provides balanced comfort in the passenger compartment.

8.2.7. Opening, closing and directing air vents

Some of the air vents in the passenger compartment can be individually opened, closed and directed.

Misting can be eliminated by directing the outer air vents towards the door windows.

Direct the outer air vents into the passenger compartment to maintain a comfortable temperature in warm weather.

Opening and closing the air vents

When the mark on the knob is vertical, the airflow is strongest.

Directing air flow

1 Move the lever in the center of the air vent horizontally or vertically to direct the airflow from the vent.

8.3. Parking climate

8.3.1. Preconditioning

8.3.1.1. Preconditioning

Preconditioning is a climate function that, if possible, attempts to achieve a comfortable temperature in the passenger compartment before driving.

Preconditioning can be started immediately or started at a preset time using a timer.

The function utilizes several of the vehicle's systems:

- In cold weather, the parking heater heats the passenger compartment to a comfortable temperature.
- In warm weather, air conditioning cools the passenger compartment to a comfortable temperature.
- The electrically heated steering wheel* and seats* can be activated.
- Heating for the rear window and door mirrors is automatically activated as needed.

Never leave children or people who cannot exit the vehicle without help alone in the vehicle.

During preconditioning in a hot climate, condensation from the air conditions may drip under the vehicle. This is normal.

(i) Note

Preconditioning can be used to warm up the vehicle even if it is not connected to an electrical outlet. Full preconditioning is available when the hybrid battery has a sufficient charge level. Otherwise, preconditioning is limited depending on the charge level of the hybrid battery.

If the vehicle is not connected to an electrical socket it is still possible in a warm climate to achieve brief cooling of the passenger compartment by direct starting preconditioning.

A charging post that is not always active, for example because of a timer, can cause loss of function for preconditioning.

(i) Note

During preconditioning of the passenger compartment, the vehicle works to reach a comfortable temperature and not the temperature set in the climate system.

^{*} Option/accessory.

8.3.1.2. Starting and stopping preconditioning

Preconditioning heats or cools the passenger compartment, if possible, before driving. The function can be started in the center display or from a cellular phone.

Starting and stopping from the vehicle

Tap the symbol in the center of the climate bar to open Climate view in the center display.

- Select the Parking climate tab. 2
- Tap the boxes to select if seat/steering wheel heating should be activated along with preconditioning for each function. 3
- Tap Preconditioning. 4
- > Preconditioning starts/stops and the button lights up/goes out.

(i) Note

Preconditioning can be used to warm up the vehicle even if it is not connected to an electrical outlet. Full preconditioning is available when the hybrid battery has a sufficient charge level. Otherwise, preconditioning is limited depending on the charge level of the hybrid battery.

If the vehicle is not connected to an electrical socket it is still possible in a warm climate to achieve brief cooling of the passenger compartment by direct starting preconditioning.

A charging post that is not always active, for example because of a timer, can cause loss of function for preconditioning.

(i)Note

The vehicle doors and windows should be closed during preconditioning of the passenger compartment.

Start from the mobile app

A device with the Volvo Cars app* can be used to start preconditioning or check settings. Preconditioning heats or cools the passenger compartment (using the vehicle's air conditioning) to a comfortable temperature.

The passenger compartment can also be preconditioned using the (Engine Remote Start – ERS)^[1] function via the Volvo Cars app*.

* Option/accessory.

8.3.1.3. Preconditioning timer

The timer can be set to finish preconditioning at a predetermined time.

The timer can store up to 8 preset times for

- a time on a particular date
- a time on one or more days of the week, with or without the repeat function.

(i) Note

Preconditioning can be used to warm up the vehicle even if it is not connected to an electrical outlet. Full preconditioning is available when the hybrid battery has a sufficient charge level. Otherwise, preconditioning is limited depending on the charge level of the hybrid battery.

If the vehicle is not connected to an electrical socket it is still possible in a warm climate to achieve brief cooling of the passenger compartment by direct starting preconditioning.

A charging post that is not always active, for example because of a timer, can cause loss of function for preconditioning.

8.3.1.4. Activating and deactivating preconditioning timer

Timer settings in the preconditioning timer can be activated or deactivated as needed.

Timer buttons in the Parking climate tab in Climate view.

Open Climate view in the center display.

2 Select the Parking climate tab.

- 3 Activate/deactivate a timer setting by tapping the timer button to the right of the setting.
- > The timer is activated/deactivated and the button lights up/goes out.

8.3.1.5. Deleting preconditioning timer settings

A preconditioning timer setting that is no longer needed can be deleted.

The button for editing a list/deleting a timer setting in the Parking climate tab in Climate view.

Open Climate view in the center display.

- 2 Select the Parking climate tab.
- 3 Tap Edit list.
- **4** Tap the editing icon to the right in the list.
- > The icon will change to the text **Delete**.
- 5 Tap Delete to confirm.
- > The timer setting will be deleted from the list.

8.3.1.6. Adding and editing timer settings for preconditioning

The preconditioning timer can store up to 8 preset timer settings.

Adding a timer setting

Button for adding a timer setting in the Parking climate tab in Climate view.

Open Climate view in the center display.

- Select the Parking climate tab. 2
- Tap Add timer. 3
- > A pop-up window will appear.

(i) Note

It is not possible to add a time setting if there are already 8 settings for the timer. Delete a time setting to be able to add a new one.

Tap Date to set a time for a specific date. 4

Tap Days to set a time for one or more days of the week.

With Days: Activate/deactivate the repeat function by selecting/deselecting the Repeat weekly checkbox.

- With **Date**: Select a date for preconditioning by scrolling in the date list using the arrows. 5 With Days: Select days of the week for preconditioning by tapping the buttons for the days.
- Set the time at which preconditioning should be completed by scrolling using the arrows in the clock. 6
- Tap **Confirm** to add a timer setting. 7
- > The timer setting will be added to the list and activated.

Editing the timer setting

Open Climate view in the center display. 1

- 2 Select the Parking climate tab.
- **3** Tap the timer setting you would like to change.
- > A pop-up window will appear.
- **4** To edit a timer setting, follow the procedures described under the heading "Adding a timer setting" above.

8.3.2. Parking climate comfort

8.3.2.1. Climate comfort retaining function

The climate in the passenger compartment can be maintained when the vehicle is parked, e.g. if the engine is turned off but the driver or passengers remain in the vehicle.

This function can only be direct-started from the center display.

The function utilizes several of the vehicle's systems:

- Residual heat from the engine is used to help heat the passenger compartment to a comfortable temperature.
- In warm weather, the ventilation system cools the passenger compartment by blowing air in from outside.

/ Warning

Never leave children or people who cannot exit the vehicle without help alone in the vehicle.

(i) Note

Climate comfort maintenance will be deactivated if the vehicle is locked from the outside in order to avoid using residual engine heat unnecessarily. This function is intended to be used to maintain climate comfort when the driver or a passenger remains in the vehicle after the engine is turned off.

The climate comfort retaining function is limited in duration in cold weather depending on the amount of residual warmth available.

8.3.2.2. Starting and switching off the climate retaining function when parking

The climate retaining function maintains the climate settings in the vehicle after the engine has been switched off. The function can be activated in the center display.

Tap the symbol in the center of the climate bar to open Climate view in the center display.

- 2 Select the Parking climate tab.
- 3 Tap Keep climate comfort.
- > The climate comfort retaining function will be activated/deactivated and the button light will go on/off.

(i) Note

Maintained climate comfort is not possible when there is not sufficient residual engine heat to maintain the climate settings in the passenger compartment, or if the outside temperature is above approximately 20 °C (68 °F).

(i) Note

Climate comfort maintenance will be deactivated if the vehicle is locked from the outside in order to avoid using residual engine heat unnecessarily. This function is intended to be used to maintain climate comfort when the driver or a passenger remains in the vehicle after the engine is turned off.

The climate comfort retaining function is limited in duration in cold weather depending on the amount of residual warmth available.

8.3.3. Parking climate

Parking climate is an umbrella term for various functions that improve the passenger compartment climate when the vehicle is parked, e.g. preconditioning.

Parking climate functions are controlled from the **Parking climate** tab in the center display's Climate view. Tap the symbol in the center of the climate bar to open Climate view.

8.3.4. Parking climate symbols and messages

A number of symbols and messages related to parking climate may be displayed in the instrument panel.

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note. 323 / 1010 Messages related to parking climate can also be displayed in a device that has the Volvo Cars app*.

Symbol	Message	Meaning
i	Parking climate Service required	Parking climate is not functioning properly. Contact a workshop ^[1] to have the system checked as soon as possible.
i	Parking climate Temporarily unavailable	Parking climate is temporarily not functioning properly. If the problem persists, contact a workshop ^[1] to have the system checked.
i	Parking climate Unavailable Charge level too low	The parking climate cannot be activated because the hybrid battery's charge level is too low to start the parking heater. Start the vehicle.
i	Parking climate Unavailable, not connected to power supply	The parking climate cannot be activated if the charging cable is not connected. Connect the charging cable.
i	Parking climate Limited Charge level too low	Parking climate will only run for a limited time when the hybrid battery's charge level is too low. Start the vehicle.

* Option/accessory.

^[1] An authorized Volvo workshop is recommended.

8.3.5. Parking heater

The parking heater heats the passenger compartment as needed before driving if preconditioning is activated.

The parking heater is one of two sub-functions of the vehicle's heater. The heater is mounted in the engine compartment.

The parking heater starts automatically if the parking climate's preconditioning is activated and the passenger compartment needs to be heated.

(i) Note

Make sure that the hybrid battery has sufficient charge if the parking heater must be used.

8.4. Heater

8.4.1. Heater

The heater has two sub-functions that help warm the passenger compartment or engine in various situations.

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note. 324 / 1010
The heater has two sub-functions:

- Parking heater heats the passenger compartment as needed when the parking climate's preconditioning is activated.
- Auxiliary heater heats the passenger compartment and engine while driving.

The heater is a high-voltage coolant heater and is mounted in the engine compartment.

Battery and charging

The heater is powered by the vehicle's hybrid battery. If the charge level in the hybrid battery is too low, the heater will switch off automatically and a message will be displayed in the instrument panel.

(i) Note

Make sure that the battery has sufficient charge if the heater must be used.

8.4.2. Parking heater

The parking heater heats the passenger compartment as needed before driving if preconditioning is activated.

The parking heater is one of two sub-functions of the vehicle's heater. The heater is mounted in the engine compartment.

The parking heater starts automatically if the parking climate's preconditioning is activated and the passenger compartment needs to be heated.

(i) Note

Make sure that the hybrid battery has sufficient charge if the parking heater must be used.

8.4.3. Additional heater

The auxiliary heater helps heat the passenger compartment and engine while driving.

The auxiliary heater is one of two sub-functions of the vehicle's heater. The heater is mounted in the engine compartment.

The auxiliary heater is started and controlled automatically when extra heat is required while the vehicle is being driven.

It switches off automatically when the ignition is switched off.

8.4.4. Activating and deactivating the auxiliary heater

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note. 325 / 1010

The auxiliary heater helps heat the passenger compartment and engine while driving.

It is possible to set whether automatic start for the auxiliary heater should be activated or deactivated.

- Tap Settings in the Top view in the center display. 1
- Tap Climate. 2
- Select Additional Heater to activate/deactivate automatic start for the auxiliary heater. 3

(i) Note

If automatic start of the auxiliary heater is deactivated, this may impair comfort in the passenger compartment since the climate system then does not have a heat source during electrical operation.

8.5. Climate

The vehicle is equipped with electronic climate control. The climate system cools, heats and dehumidifies the air in the passenger compartment.

All of the climate system functions are controlled from the center display and the buttons on the center console.

Certain rear seat functions can also be controlled from the climate controls* on the rear of the tunnel console.

(i) Note

The climate system can be used to cool down the media system in the center display if needed. In these cases, the message Climate system Cooling the infotainment system will be shown in the instrument panel.

* Option/accessory.

8.6. Climate control system voice commands^[1]

Voice control commands can be used for the climate control system to e.g. change temperature, activate seat heating* or change blower speed.

Tap (€ and say one of the following commands:

"Climate" - starts a command dialog for climate controls and provides examples of commands that can be used.

- "Set temperature to X degrees" sets desired temperature.
- "Raise temperature"/"Lower temperature" raises/lowers the set temperature.
- "Sync temperature" synchronizes the temperature for all climate zones in the vehicle with the temperature set for the Ð driver's side.
- "Air on feet"/"Air on body" opens the desired air vent.
- "Air on feet off"/"Air on body off" closes the desired air vent. Ð
- "Set fan to max"/"Turn off fan" changes blower speed to Max/Off.
- "Raise fan speed"/"Lower fan speed" raises/lowers the set blower speed.
- "Turn on auto" activates automatic climate control. .
- "Air condition on"/"Air condition off" activates/deactivates air conditioning.
- "Recirculation on"/"Recirculation off" activates/deactivates air recirculation.
- "Turn on defroster "/"Turn off defroster" activates/deactivates window and door mirror defrosting.
- "Turn on max defroster"/"Turn off max defroster" activates/deactivates max defroster.
- "Turn on rear defroster"/"Turn off rear defroster" Activates/deactivates heated rear window and door mirrors.
- "Turn steering wheel heat on"/"Turn steering wheel heat off" activates/deactivates heated steering wheel*.
- "Raise steering wheel heat"/"Lower steering wheel heat" raises/lowers the level of steering wheel heating*. Ð
- "Turn on seat heat"/"Turn off seat heat" activates/deactivates driver's seat heating*.
- "Raise seat heat"/"Lower seat heat" raises/lowers the level of driver's seat heating*.

(i) Note

Not all system languages support voice control. If a language supports voice control, it is marked with a 😢 symbol in the list of available system languages. Read more about where the information is found in the section on voice control settings.

^[1] Certain markets only.

* Option/accessory.

8.7. Climate control system service

Service and repairs on the air conditioning system should only be done by an authorized workshop.

Troubleshooting and repairs

The air conditioning system contains a fluorescent tracer substance. Ultraviolet light is used to search for leaks.

Volvo recommends contacting an authorized Volvo workshop.

The climate system in the vehicle uses a freon-free R1234yf refrigerant. For information regarding the refrigerant, refer to the decal located on the inside of the frunk.

/ Warning

The air conditioning system contains the refrigerant R1234yf under pressure. In accordance with SAE J2845 (Technician Training for Safe Service and Containment of Refrigerants Used in Mobile A/C System), service and repairs to the refrigerant system may only be performed by trained and certified technicians in order to ensure the safety of the system.

8.8. Climate control sensors

The climate system has a number of sensors to help regulate the climate settings in the vehicle. Do not cover or block the sensors with clothing or other objects.

Location of the sensors

- 1 Sunlight sensors on the upper side of the dashboard.
- 2 Humidity sensor in the rearview mirror console.
- 3 Ambient temperature sensor in the right-side door mirror.
- 4 Passenger compartment temperature sensor near the buttons in the center console.

On vehicles equipped with the Interior Air Quality System*, there is also an air quality sensor in the climate system's air intake.

* Option/accessory.

8.9. Climate zones

The vehicle is divided into climate zones to make it possible to set different temperatures for different parts of the passenger compartment.

2-zone climate system

Climate zones with 2-zone climate system.

In 2-zone climate systems, the passenger compartment temperature can be set separately for the left and right sides of the vehicle.

8.10. Perceived temperature

The climate control system regulates the climate in the passenger compartment based on perceived temperature, not actual temperature.

The selected passenger compartment temperature is based on the physical perception of the current ambient temperature, airflow speed, humidity, sunlight in the passenger compartment, etc.

The system has a sunlight sensor that detects which side of the vehicle the sunlight is shining on and adjusts the temperature accordingly. This means that the temperature of the air coming out of the vents may be different for the left and right sides, even if the temperature setting is the same for both sides.

9.1. Remote key

9.1.1. Driver profiles

9.1.1.1. Driver profiles

Many of the vehicle's settings can be customized to the driver's personal preferences and saved in one or more driver profiles.

There are the same number of driver profiles in the vehicle as keys, plus an extra guest profile. These personal settings are automatically saved in the active driver profile. Every key, except the Care Key, can be connected to a personal driver profile. When the linked key is used, the vehicle is customized to the specific settings of that driver profile. Care Key is always connected to the Care Key profile as well as the speed limit set for it. This profile cannot be protected as its own personal profile. The same applies for the guest profile, which cannot be protected or connected to any key.

Which settings are saved in driver profiles?

Many of the settings made in the vehicle will be automatically stored in the active driver profile if the profile is not protected. The vehicle has settings that can be made either personal or global. The personal settings are saved in driver profiles.

Settings that can be saved in a driver profile include, among other things, screens, mirrors, front seats, navigation*, audio and media system, language and voice control.

Some settings are global settings. These settings can be changed but are not saved to a specific driver profile. Changes to global settings affect all profiles.

Global settings

Global settings do not change when driver profiles are changed. They remain the same regardless of which driver profile is currently active.

Keyboard layout is an example of a global setting. If driver profile X is used to add additional keyboard languages, these languages will also be available for driver profile Y. The settings for keyboard layout are not saved to a specific driver profile - the settings are global.

Personal settings

If driver profile X has been used to e.g., set the brightness for the center display, driver profile Y will not be affected by this setting. It will only be saved to driver profile X because brightness setting is a personal setting.

* Option/accessory.

9.1.1.2. Changing a driver profile's name

It is possible to change the names of the different driver profiles used in the vehicle. It is not possible to change the name of a profile connected to a Care Key.

- 1 Tap Settings in the Top view in the center display.
- 2 Tap System → Driver Profiles.
- 3 Select Edit Profile.
- > A menu will open in which the driver profile can be changed.
- 4 Tap the Profile Name box.
- > A keyboard will be displayed and can be used to change the name. Tap $rac{}{rac{}}$ to close the keyboard.
- 5 Save the name change by pressing Back or Close.
- > The name has now been changed.

```
(i) Note
```

Profile names may not begin with a space. If a space is entered first, the profile name will not be saved.

9.1.1.3. Connect key to driver profile

A remote key can be linked to a driver profile. This driver profile and all of its settings will then automatically be selected every time the vehicle is used with that particular key.

The first time the key is used, it is not linked to any specific driver profile. The **Guest** profile is automatically activated when the ignition is switched on.

A driver profile can also be selected manually without linking it to any key. When the vehicle is unlocked, the last active driver profile will be activated. If the key has ever been linked to a driver profile, it is not necessary to manually select a driver profile when using that particular key.

Connecting a key to a driver profile

(i) Note

A key can only be connected to a driver profile when the vehicle is stationary.

First select the profile you would like to link to the key (if that profile is not already active). The active profile can then be linked to the key.

- 1 Tap Settings in the Top view in the center display.
- 2 Tap System → Driver Profiles.
- 3 Mark the desired profile. The display will return to Home view. The Guest profile cannot be linked to a remote key.
- 4 Pull down Top view again and tap Settings → System → Driver Profiles → Edit Profile.
- 5 Select Connect key to link the profile with the key. A driver profile can only be linked to the key currently being used in the vehicle. If there are any other keys in the vehicle, More than one key is found, put the key you want to connect on

backup reader will be displayed.

Location of the backup key reader in the storage compartment.

- > When Profile connected to key is displayed, the key and driver profile have been linked.
- 6 Tap OK.
- > The key used is now linked to the driver profile and will remain so as long as the Connect key box is not deselected.

9.1.1.4. Protecting a driver profile

It may not always be desirable to store settings made in the vehicle to the active driver profile. In these instances, the driver profile can be protected. A profile that is connected to a Care Key cannot be protected.

(i) Note

Protecting a driver profile is only possible when the vehicle is stationary.

To protect a driver profile:

- 1 Tap Settings in the Top view in the center display.
- 2 Tap System → Driver Profiles.
- 3 Select Edit Profile.
- > A menu will open in which the driver profile can be changed.
- 4 Tap Protect Profile to protect the profile.
- 5 Confirm your selection to protect the profile by tapping Back/Close.
- ➤ When the profile is protected, settings made in the vehicle will not be automatically stored to the profile. The changes must instead be saved manually under Settings → System → Driver Profiles → Edit Profile by tapping Save current settings to the profile. If the profile is not protected, the settings will be automatically stored to the profile. You can also

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note.

save changes to a protected profile by pulling down Top view in the center display, tapping **Driver Profiles** and then tapping the save icon.

9.1.1.5. Selecting a driver profile

When the center display starts up, the selected driver profile will be shown at the top of the screen. The most recently used driver profile will be active the next time the vehicle is unlocked. A different driver profile can be selected once the vehicle has been unlocked. However, if the key has been linked to a driver profile, this profile will be used instead when the vehicle is started.

There are three options for switching between driver profiles.

Option 1:

- 1 Tap the name of the driver profile shown at the top of the center display when the display starts up.
- > A list will appear, showing driver profiles that can be selected.
- 2 Select desired driver profile.
- 3 Tap Confirm.
- > The driver profile has now been selected and the system will load the settings stored in that profile.

Option 2:

- 1 Pull down Top view in the center display.
- 2 Tap Profile.
- > The same list as in option 1 will be displayed.
- **3** Select desired driver profile.
- 4 Tap Confirm.
- > The driver profile has now been selected and the system will load the settings stored in that profile.

Option 3:

1 Pull down Top view in the center display.

- 2 Tap Settings in the Top view in the center display.
- 3 Tap System → Driver Profiles.
- > A list will appear, showing driver profiles that can be selected.
- 4 Select desired driver profile.
- > The driver profile has now been selected and the system will load the settings stored in that profile.

9.1.1.6. Resetting driver profile settings

Settings that have been saved for one or more driver profiles can be reset when the vehicle is stationary.

(i) Note

Factory Reset is only possible when the vehicle is stationary.

- 1 Tap Settings in the Top view.
- 2 Tap System → Factory Reset → Reset Personal Settings.
- 3 Select option Reset for the active profile, Reset for all profiles or Cancel.

9.1.2. Connect key to driver profile

A remote key can be linked to a driver profile. This driver profile and all of its settings will then automatically be selected every time the vehicle is used with that particular key.

The first time the key is used, it is not linked to any specific driver profile. The **Guest** profile is automatically activated when the ignition is switched on.

A driver profile can also be selected manually without linking it to any key. When the vehicle is unlocked, the last active driver profile will be activated. If the key has ever been linked to a driver profile, it is not necessary to manually select a driver profile when using that particular key.

Connecting a key to a driver profile

A key can only be connected to a driver profile when the vehicle is stationary.

First select the profile you would like to link to the key (if that profile is not already active). The active profile can then be linked to the key.

- 1 Tap Settings in the Top view in the center display.
- 2 Tap System → Driver Profiles.
- 3 Mark the desired profile. The display will return to Home view. The Guest profile cannot be linked to a remote key.
- 4 Pull down Top view again and tap Settings → System → Driver Profiles → Edit Profile.
- 5 Select Connect key to link the profile with the key. A driver profile can only be linked to the key currently being used in the vehicle. If there are any other keys in the vehicle, More than one key is found, put the key you want to connect on backup reader will be displayed.

Location of the backup key reader in the storage compartment.

- > When Profile connected to key is displayed, the key and driver profile have been linked.
- 6 Tap OK.
- > The key used is now linked to the driver profile and will remain so as long as the Connect key box is not deselected.

9.1.3. Electronic immobilizer

The electronic immobilizer is a start inhibitor that helps prevent the vehicle from being started without the correct key.

The following instrument panel error messages are related to the electronic immobilizer:

ymb	ol	M	es	sa	ge	2

found

Vehicle key not

S

(1)

Key not recognized during start. Place the key on the key symbol in the storage compartment in the center console and try to start the vehicle again.

Remote immobilizer with tracking system^[1]

The vehicle is equipped with a system that makes it possible to track and locate the vehicle and to remotely activate the immobilizer to prevent the vehicle from being started. Contact your nearest Volvo retailer for more information and assistance activating the system.

The following instrument panel error messages are related to the remote immobilizer with tracking system:

Symbol	Message	Meaning
FB	Remotely immobilised Vehicle not possible to start	The remote immobilizer with tracking system is activated. The vehicle cannot be started. Contact Volvo On Call service center.

^[1] Only certain markets and in combination with Volvo On Call.

9.1.4. Keys

The vehicle's keys lock and unlock the vehicle. When a key is in the front section of the passenger compartment, the vehicle can be started.

Available key types are the standard key, the buttonless key (Key Tag)*, and Care Key.^[1]

The standard key and the Care Key are equipped with buttons. Additional keys than those included as standard can be ordered. For vehicles equipped with keyless locking and unlocking*, a smaller, lighter and buttonless key (Key Tag) can be purchased as an accessory.

To start the vehicle, a key must be in the front section of the passenger compartment.

For vehicles equipped with keyless locking and unlocking (Passive Entry)*, the engine can be started with the key anywhere in the vehicle.

The keys can be linked to different driver profiles to store personal settings in the vehicle. Care Key is connected to a specific driver profile that is more restricted.

/ Warning

The key contains a button cell battery. Keep new and used batteries out of the reach of children. If batteries are swallowed, they can cause serious injury.

If any damage is detected, e.g. if the battery cover cannot be closed properly, do not use the product. Keep defective products out of the reach of children.

Key buttons

The key has four buttons, one on the left side and three on the right.

Locking – Press once to lock the doors, tailgate and fuel filler door and arm the alarm.

Press and hold to close all windows.

Press and hold to open all windows at the same time. This can be used to e.g. quickly air out the vehicle in hot weather.

- **Tailgate** Unlock and disarm the tailgate only. On vehicles equipped with the power tailgate*, press and hold to automatically open the tailgate. Press and hold to close an open tailgate (an audible warning signal will be given).
- Panic alarm Used to attract attention in emergency situations. Press and hold the button for at least 3 seconds or press twice within 3 seconds to activate the vehicle's turn signals and horn. To deactivate, wait at least 5 seconds and press the button again. If no action is taken, the panic alarm will deactivate automatically after 3 minutes.

If anyone is left in the vehicle, make sure that power to the power windows and panoramic roof* is cut off by always taking the key with you when you leave the vehicle.

(i) Note

A key that has been locked in the vehicle is temporarily deactivated and cannot be used until the vehicle is unlocked using another valid key.

Button-less key (Key Tag)*

A buttonless key^[2] can be ordered as an accessory for vehicles equipped with the keyless locking and unlocking function. Start and keyless locking and unlocking function in the same way as with the standard key. The key is waterproof up to a depth of ap-

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note. 339 / 1010 prox. 10 meters (30 feet) for up to 60 minutes. It does not have a key blade and the battery cannot be replaced.

Care Key restricted key

A Care Key makes it possible to set a maximum speed limit when the key is being used. This limit is intended to promote safe use of the vehicle, e.g. when it is loaned out.

If the active key is removed from the vehicle

If the key is removed from the vehicle while the engine is running, the warning message **Vehicle key not foundRemoved from vehicle** will be displayed in the instrument panel and an audible signal will sound when the last door is closed.

The message will disappear when the key is returned to the vehicle and the O button on the right-side steering wheel keypad is pressed or when all doors are closed.

Interference

Electromagnetic fields or obstructing objects may interfere with the key's functions for keyless start and keyless locking and unlocking*.

(i) Note

Do not store the vehicle's keys near metal objects or electronic devices (phones, tablets, laptops, chargers, etc.). Keep a distance between them of at least 10-15 cm (4-6 inches).

If you experience interference, use the key's detachable blade to unlock the vehicle. Then place the key in the backup reader in the tunnel console's storage compartment to disarm the alarm and start the vehicle.

(i) Note

To help ensure that the key can be detected by the backup reader, make sure there are no other vehicle keys, metal objects or electronic devices (phones, tablets, laptops, chargers, etc.) in the storage compartment. These objects can interfere with its functioning.

California Proposition 65

Operating, servicing and maintaining a passenger vehicle can expose you to chemicals including engine exhaust, carbon monoxide, phthalates, and lead, which are known to the State of California to cause cancer and birth defects or other reproductive harm. To minimize exposure, avoid breathing exhaust, do not idle the engine except as necessary, service your vehicle in a well ventilated area and wear gloves or wash your hands frequently when servicing your vehicle. For more information go to www.P65Warnings.ca.gov/passenger-vehicle [https://www.p65warnings.ca.gov/products/passenger-vehicle [https://www.p65warnings.ca.gov/products/passenger-vehicle [https://www.p65warnings.ca.gov/products/passenger-vehicle].

* Option/accessory.

^[1] The illustration is generic - details may vary according to vehicle model.

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note.

9.1.5. Ordering additional keys

If more keys than the standard number supplied with the vehicle are needed, or if any key is lost, new keys can be ordered. If the vehicle is equipped with keyless locking and unlocking*, a buttonless key (Key Tag) can also be ordered.

A total of 12 keys can be programmed and used for the same vehicle. An additional driver profile will be added for each new key. This also applies to the key tag.

Lost key

If a key is lost, a replacement key can be ordered through a Volvo retailer or an authorized Volvo workshop. As an anti-theft measure, the code of the lost remote key must be erased from the system. All remaining keys must be brought to the workshop.

The current number of keys registered for the vehicle can be checked via driver profiles in the center display's Top view - select Settings -> System -> Driver Profiles.

(i) Note

Volvo recommends that you order a new or duplicate key from an authorized Volvo workshop.

You can also obtain additional or duplicate keys from certain independent repair facilities and locksmiths that are qualified to make keys. Each key must be programmed to work with your vehicle.

A list of independent repair facilities and/or locksmiths known to Volvo that can cut and code replacement keys can be found:

- at volvocars.com
- by calling Volvo Customer Care 1-800-458-1552.

* Option/accessory.

9.1.6. Replacing the key's battery

The battery in the key can be replaced when it is discharged. Battery life depends on how much the key is used. The battery for the buttonless key (Key Tag)* cannot be replaced.

341 / 1010

When the information icon illuminates and the message **Vehicle key bat**. **Iow** appears in the instrument panel, the key's battery needs to be replaced.

Reduced key range is another sign that the battery level is low.

The battery in the smaller key without buttons (the Key Tag)* cannot be replaced. A new key can be ordered from an authorized Volvo workshop.

() Important

Hand in used Key Tags to an authorized Volvo workshop, where the key can be deleted from the vehicle's system. The key can still be used even if the battery is discharged to start the vehicle via a back-up start.

Opening the key and replacing its battery

() Important

Do not touch the contact surfaces of new batteries. This impairs the battery's function.

Hold the key with the front side (with the Volvo logo) facing up, and the key ring bracket facing you.

There should be a catch to the left of the key ring bracket. If this catch is on the wrong side, the front and back sides have been switched during a previous battery change.

1 1

Move the catch next to the key ring bracket to the side and slide the front cover away from the bracket.

The cover comes loose and can be lifted off.
 There is an additional catch under the front cover for removing the back cover.

Move the catch behind the front cover to the side and slide the rear cover away from the key ring bracket.

The cover comes loose and can be lifted off.
 Under the rear cover is a battery cover.

Turn the battery cover counterclockwise to the OPEN position. Use a screwdriver, coin or similar.

Remove the battery cover. If it is difficult to remove, use a narrow object to carefully pry it up.

The battery's positive side (+) faces upward. Remove the battery by pressing its edge and then lifting it out.

5 5

Insert a new battery with the positive side (+) facing upward. Do not touch the contact surfaces of the key battery.

Place the edge of the battery under the two lower plastic catches.

Then push the battery down so that it is held in place by the upper plastic catch.

(i) Note

Use batteries with the designation CR2032, 3 V.

(i) Note

6

7

7

6

Volvo recommends that replacement batteries for the key meet the UN Manual of Test and Criteria, Part III, subsection 38.3. The supplied batteries or batteries replaced by an authorized Volvo workshop meet the same criteria.

Put the battery cover back into place and turn it clockwise to the CLOSE position.

Put the back cover on in the reverse order it was removed. The back cover does not have a logo. Press the cover down until it clicks and then push it the last few millimeters back to its original position.

A second click indicates that the cover is correctly positioned and locked into place.
 There should not be any gaps.

Turn the key and put the front cover back on in the same way as the back cover.

/ Warning

Make sure the battery is positioned correctly with the right polarity. If the key will not be used for a prolonged period of time, remove the battery to avoid battery leakage and damage. Wear protective gloves when handling damaged batteries, as batteries that are damaged or leaking can cause corrosive damage in contact with the skin.

- Keep batteries out of the reach of children.
- Do not leave batteries lying out where they could be swallowed by children or pets.
- Never disassemble, short-circuit or place a battery into open fire.
- Do not charge non-chargeable batteries. They could explode.
- Check products with batteries regularly for signs of damage.

Do not use the key if there is anything to suggest that the key or its battery has been damaged or is beginning to leak. Keep defective products out of the reach of children.

() Important

Batteries must be recycled in an environmentally sound manner at the end of their service life.

/ Warning

California Proposition 65

Operating, servicing and maintaining a passenger vehicle can expose you to chemicals including engine exhaust, carbon monoxide, phthalates, and lead, which are known to the State of California to cause cancer and birth defects or other reproductive harm. To minimize exposure, avoid breathing exhaust, do not idle the engine except as necessary, service your vehicle in a well ventilated area and wear gloves or wash your hands frequently when servicing your vehicle. * Option/accessory.

9.1.7. Locking and unlocking using the key buttons

All doors and tailgate can be locked and unlocked simultaneously using the buttons on the key.

Locking using the key buttons

The illustration is generic.

1 Press the $\left[\begin{array}{c} \bigcirc \\ \end{array} \right]$ button to lock the vehicle.

To activate the locking sequence, the driver's door must be closed^[1]. If any of the other doors or the tailgate are open, they will be locked and the alarm will be armed once they are closed.

(i) Note

A key that has been locked in the vehicle is temporarily deactivated and cannot be used until the vehicle is unlocked using another valid key.

Locking when the tailgate is open

(i) Note

If the vehicle is locked and the tailgate is still open, make sure that the key is not left in the cargo compartment when the tailgate is closed^[1].

Unlocking using the key buttons

1 Press the $\frac{1}{2}$ button to unlock the vehicle.

Automatic relocking

If none of the doors or tailgate are opened within two minutes after being unlocked, they will automatically relock. This function reduces the risk of inadvertently leaving the vehicle unlocked.

If the key doesn't work

If the key is not working to lock or unlock the vehicle, its battery may be discharged. Use the detachable key blade to lock/unlock the driver's door instead.

* Option/accessory.

^[1] If the vehicle is equipped with keyless locking/unlocking*, all side doors must be closed.

9.1.8. Care Key – restricted key

A Care Key enables the vehicle owner to set a maximum speed limit for the vehicle. This limit is intended to promote safe use of the vehicle, e.g. when it is loaned out.

The button functions for a Care Key are the same as those for a standard key, but the key is connected to a particular Care Key driver profile with preselected settings. Another key must be used to change the settings connected to the Care Key or to change to another driver profile.

The restrictions that can be set with a Care Key are intended to give the vehicle owner increased peace of mind when handing over the vehicle to a young or inexperienced driver, a valet, a workshop, etc.

Using a Care Key

The restricted profile is activated when the vehicle is unlocked with a Care key, or when the driver's door is opened and the vehicle detects a Care Key on the driver's side. The Care Key profile can also be activated via the menu where driver profile is selected. In this way, the standard key does not have to be removed.

To then activate a regular driver profile, the vehicle must be unlocked using an unrestricted key.

Indication in the instrument panel

When Care Key is being used, this will be indicated by a symbol in the instrument panel. A red line on the speedometer indicates the selected speed limit.

Symbol	Meaning
	Speed limitation is active.

9.1.9. Care Key settings

Changes to the Care Key profile in the center display can only be made using another key.

Setting options

The following limitations are available:

- Speed range: 50-180 km/h (30-112 mph)
- Increments: 1 km/h (1 mph)

Adjusting settings

- 1 Unlock the vehicle with a key that is not a Care Key.
- 2 Tap Settings in the center display's Top view.
- 3 Tap System → Driver Profiles → Care Key.
- **4** Check the box to activate restrictions and set the desired restrictions.

9.1.10. Unlocking the tailgate using the key button

There is a button on the key for unlocking only the tailgate.

- 1 Press the 🗁 button on the key.
- The tailgate is unlocked and can be opened from the outside.
 The side doors remain locked and armed. The lock and alarm indicator on the dashboard will go out to indicate that the vehicle is no longer fully locked.

If the tailgate is not opened within 2 minutes, it will be relocked and the alarm armed.

Power tailgate*

- 1 Press and hold the key's ⋩ button for a few seconds.
- > The tailgate will unlock and open. However, the side doors will remain locked and armed.

(i) Note

If the power tailgate system * has been working continuously for too long, it will be switched off to help prevent overheating. It can be used again after a few minutes.

* Option/accessory.

9.1.11. Detachable key blade

The standard key contains a detachable metal key blade that has several different functions.

A Volvo workshop can provide you with the key blade's unique code, which is recommended in case you need to order a new key blade.

Using the detachable key blade

The detachable key blade can be used to:

- manually open the left-side front door if central locking cannot be activated by pushing a button
- emergency lock all doors
- activate/deactivate the rear door mechanical child locks.

If the key blade has been used to unlock the vehicle, the alarm can be disabled and the vehicle started by placing the key in the backup reader in the tunnel console storage compartment.

The optional buttonless key (Key Tag) does not have a detachable key blade.

Removing the key blade

Hold the key with the front side (with the Volvo logo) facing up, and the key ring bracket facing you.

There should be a catch to the left of the key ring bracket. If this catch is on the wrong side, the front and back sides have been switched at some point when the key was disassembled.

2

2

Move the catch next to the key ring bracket to the side and slide the front cover away from the bracket.

> The cover comes loose and can be lifted off.

Remove the key blade.

3

Put the front cover on in the reverse order it was removed. Press the cover down until it clicks and then push it the last few millimeters back to its original position.

A second click indicates that the cover is correctly positioned and locked into place.
 There should not be any gaps.

9.1.12. Locking and unlocking with detachable key blade

The detachable key blade can be used to unlock one of the vehicle's doors from the outside, for example if the key's battery is discharged.

Unlocking using the key blade

(i) Note

When the door is unlocked using the detachable key blade and then opened, the alarm will be triggered. The alarm must be deactivated manually – it can be a good idea to read the section about this before opening the vehicle.

Pull the handle on the left-side front door to its end position.

> The keyhole should now be visible inside the handle.

2 🛛

Insert the key.

3 🚯

Turn the key clockwise 45 degrees so that the key is pointing straight rearward.

4 4

Turn the key back 45 degrees to the original position and remove it.

> The door can be opened using the handle.

Locking using the key blade

The front left door can also be locked using the detachable key blade.

The other doors have a lock mechanism in the side of the door that must be pushed in using the key blade. The doors will then be mechanically locked and cannot be opened from the outside. The doors can still be opened from inside the vehicle.

Manual door lock. This is not the child lock.

- 1 Remove the detachable key blade from the key with buttons.
- 2 Insert the key blade into the opening for the lock mechanism.
- **3** Push in the key until it stops, about 12 mm (0.5 inch).
- A The door can be opened from both the outside and the inside.

B The door cannot be opened from the outside. To return to position A, open the door using the inside door handle.

(i) Note

- The door's lock controls only lock that specific door, not all doors simultaneously.
- A manually locked rear door with an activated child lock cannot be opened from either the outside or the inside. It can be unlocked using the key buttons, central locking button, keyless locking system* or through the Volvo Cars app.

* Option/accessory.

9.1.13. Key range

In order to function correctly, the key must be within a certain distance from the vehicle.

When using the key buttons

The key's functions that are controlled by the buttons have a range of about 20 meters (65 feet) from the vehicle.

If the vehicle's locks do not react, move closer and try again.

Keyless* use

For keyless operation to be possible, the key must be within a distance of about 1 to 1.5 meters (3 to 5 feet) from the vehicle's doors or tailgate.

(i) Note

The functions of the key can be disrupted by ambient radio waves, buildings, topographical conditions, etc. The vehicle can always be locked/unlocked using the key blade.

* Option/accessory.

9.1.14. Start and lock system type designations

The following information contains type designations for the start and lock system.

Alarm system

USA FCC ID: MAYDA 5823(3)

This device complies with part 15 of the FCC rules. Operation is subject to the following conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Canada IC: 4405A-DA 5823(3)

This device is subject to the following conditions: (1) This device may not cause interference, and (2) this device must accept any interference, including interference that may cause undesired operation of the device.

Remote keys (Passive Entry */Passive Start)

USA

Volvo Standard Key FCC ID: YGOHUF8423MS

Volvo Tag ID FCC ID: YGOHUF8432MS

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions:

(1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

CAUTION: Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

Canada

Volvo Standard Key IC: 4008C-HUF8423MS

Volvo Tag ID IC: 4008C-HUF8432MS

This device complies with part 15 of the FCC Rules and Industry Canada license-exempt RSS standard(s). Operation is subject to the following two conditions:

(1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Le présent appareil est conforme aux CNR d'Industrie Canada applicables aux appareils radio exempts de licence. L'exploitation est autorisée aux deux conditions suivantes :

(1) l'appareil ne doit pas produire de brouillage, et (2) l'utilisateur de l'appareil doit accepter tout brouillage radioélectrique subi, même si le brouillage est susceptible d'en compromettre le fonctionnement.

Immobilizer and Passive Entry*/Passive Start systems

USA-FCC ID: LTQVO3134

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note. 354 / 1010 This device complies with part 15 of the FCC rules. Operation is subject to the following two conditions:

(1) This device may not cause harmful interference, and

(2) this device must accept any interference received, including interference that may cause undesired operation.

Any changes or modification not expressly approved by the party responsible for compliance could void the user's authority to operate this equipment.

Canada-IC:3659A-VO3134

This device complies with Industry Canada license-exempt RSS standards. Operation is subject to the following two conditions:

(1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

* Option/accessory.

9.1.15. Antenna locations for the start and lock system

The antennas for the keyless start system and keyless locking system* are integrated in the vehicle.

Location of the antennas:

- 1 In the storage compartment in the tunnel console
- 2 In the upper front section of the left-side rear door^[1]
- 3 In the upper front section of the right-side rear door^[1]
- 4 In the cargo compartment^[1]

√ Warning

People with a pacemaker should keep a distance of at least 22 cm (9 inches) from the antennas to prevent interference between the pacemaker and the key system.

* Option/accessory.

^[1] Only in vehicles equipped with keyless locking and unlocking*.

9.1.16. Ignition modes

The vehicle's ignition can be put in various modes (levels) to make different functions available.

To enable the use of a limited number of functions when the engine is not running, the ignition can be put in one of three different levels: **0**, **I** and **II**. These levels are referred to as "ignition modes" in the Owner's Manual.

The following table shows which functions are available in each ignition mode:

Mode	Fu	Inctions				
0	•	The odometer, clock and temperature gauge are illuminated ^[1] . The power* seats can be adjusted. The center display is activated and can be used ^[1] . The infotainment system can be used ^[1] .				
	In this mode, the functions are available for a limited time and then switch off automatically.					
I	•	The panoramic roof, power windows, 12-volt electrical socket in the passenger compartment, Bluetooth, navigation, phone, blower and windshield wipers can be used.				
	•	The power seats can be adjusted.				
	•	The 12-volt electrical socket* in the cargo compartment can be used.				
	•	The infotainment system starts up automatically if it was on when the ignition was switched off.				
	El	ectrical current will be taken from the battery in this ignition mode.				
П	•	The headlights illuminate.				
	•	Warning/indicator lights illuminate for 5 seconds.				
	•	A number of other systems are activated. However, seat and rear window heating can only be activated when the engine is running.				
	T۲	is ignition mode uses a lot of current from the battery and should be avoided whenever possible!				

^[1] Also activated when the door is opened.

* Option/accessory.

9.1.17. Selecting ignition mode

The vehicle's ignition can be put in various modes (levels) to make different functions available.

Selecting an ignition mode

Location of the start button.

• Ignition mode 0 – Unlock the vehicle and keep the key in the passenger compartment.

(i) Note

To set level I or II without engine start – do not depress the brake pedal when selecting this ignition mode.

- Ignition mode I Press the start button and release.
- Ignition mode II Press the button and hold it in for approx. 5 seconds. Release the button.
- Back to ignition mode 0 To return to ignition mode 0 from modes | and ||, press the start button.

9.2. Locking and unlocking

9.2.1. Keyless locking and unlocking

9.2.1.1. Operating the tailgate with a foot movement*

The tailgate can be opened and closed by making a foot movement* under the rear bumper. This function makes it easy to access the cargo compartment when your hands are full.

The sensor is located on the left-hand side of the bumper.

One of the vehicle's keys must be in range behind the vehicle, within about 1 meter (3 feet). This also applies when the vehicle is unlocked.

Foot movement operation

Kicking motion within the sensor's activation area.

Make **one** forward kicking motion with your foot under the left section of the rear bumper. Do not touch the bumper. Take a step back.

> A short signal sounds and the tailgate opens/closes.

If several kicking movements are made without a key within range, the function will be disabled for a short time.

Do not hold your foot in a kicking motion under the vehicle. This may cause activation to fail.

Interrupting opening or closing with a foot movement

Make one forward kicking motion while the tailgate is opening or closing to stop its movement. 1

The key does not need to be in range to interrupt opening or closing.

If the tailgate is stopped just before it closes completely, it will open the next time it is activated.

<i>i</i> Note Keep the area around the foot movement sensor clean. The accumulation of dirt, ice or snow may interfere with its functioning.	
Please note that the system could be inadvertently activated in a car wash if the key is within range.	
* Option/accessory.	

9.2.1.2. Antenna locations for the start and lock system

The antennas for the keyless start system and keyless locking system* are integrated in the vehicle.

Location of the antennas:

- 1 In the storage compartment in the tunnel console
- 2 In the upper front section of the left-side rear door^[1]
- 3 In the upper front section of the right-side rear door^[1]
- 4 In the cargo compartment^[1]

/ Warning

People with a pacemaker should keep a distance of at least 22 cm (9 inches) from the antennas to prevent interference between the pacemaker and the key system.

* Option/accessory.

^[1] Only in vehicles equipped with keyless locking and unlocking*.

9.2.1.3. Keyless locking and unlocking with touch-sensitive surfaces*

With the keyless locking and unlocking function, a key only needs to be within range, e.g. in a pocket or bag. The vehicle can then be locked or unlocked by touching the pressure-sensitive surface on the door handle.

Pressure-sensitive surfaces

Door handle

There are indentations on the outside of the outer door handles for locking, and pressure-sensitive surfaces on the inside of the handles for unlocking.

Pressure-sensitive indentation for locking

Pressure-sensitive surface for unlocking

(i) Note

It is important that only one pressure-sensitive surface is activated at a time. If the handle is grasped at the same time as the lock area is pressed, there is a risk that double commands may be sent. This may cause the requested action (locking/unlocking) to be delayed or not performed at all.

Tailgate handle
The tailgate handle has a rubberized pressure plate that can only be used for unlocking.

(i) Note
 Please be aware that the system could be activated in a car wash if the key is within range.
 * Option/accessory.

9.2.1.4. Keyless locking and unlocking*

With keyless locking and unlocking, touching the pressure-sensitive indentation on the door handle will lock or unlock the vehicle.

(i) Note

One of the vehicle's keys must be within range for locking and unlocking to be possible.

1 Pressure-sensitive indentation for locking

Pressure-sensitive surface for unlocking

(i) Note

Please be aware that the system could be activated in a car wash if the key is within range.

Keyless locking

All of the doors have to be closed before the vehicle can be locked. However, the tailgate can be open when a door handle is used for locking.

- 1 Touch the marked area on the outside of one of the door handles after the door is closed. Or press the 🕬 button on the lower edge of the tailgate before it is closed.
- > The lock indicator light on the dashboard will flash to confirm that the vehicle is locked.

To close all door windows at the same time - place your finger on the pressure-sensitive indentation on the outside of the door handle and hold it there until the side windows have closed.

Locking when the tailgate is open

If the vehicle is locked and the tailgate is still open, make sure that the key is not left in the cargo compartment when the tailgate is closed.

(i) Note

If the key is detected in the vehicle, the tailgate will not lock when it is closed.

Keyless unlocking

- 1 To unlock, grasp a door handle or lightly press the rubberized button on the underside of the tailgate handle.
- > The lock indicator light on the dashboard will stop flashing to confirm that the vehicle is unlocked.

Automatic relocking

If none of the doors or tailgate are opened within two minutes after being unlocked, they will automatically relock. This function reduces the risk of inadvertently leaving the vehicle unlocked.

* Option/accessory.

9.2.1.5. Keyless unlock settings*

It is possible to select which doors should be unlocked during keyless unlocking.

To change this setting:

1 Tap Settings in the center display's Top view.

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note. 362 / 1010

- **2** Tap My Car \rightarrow Locking \rightarrow Keyless Unlock.
- **3** Select alternative:
 - All Doors unlocks all doors at the same time.
 - Single Door unlocks the selected door.

* Option/accessory.

9.2.1.6. Closing and locking the tailgate using the buttons*

The buttons on the lower edge of the tailgate can be used to close and lock the vehicle automatically.

() Important

When operating the tailgate manually, open and close it slowly. If you encounter resistance, do not use force. This could lead to damage and loss of function.

Closing^[1]

- 1 Press the ⇐ button on the underside of the tailgate.
- > The tailgate will close automatically and remain unlocked.

(i) Note

- The button remains active 24 hours after the tailgate was opened. After this time, the tailgate must be closed manually.
- If the tailgate has been open for more than 30 minutes, it will automatically close slowly.

Closing and locking^[2]

- 1 Press the < button on the underside of the tailgate.
- > The tailgate closes automatically and the vehicle locks^[3].

(i) Note

- One of the vehicle's keys must be within range for locking and unlocking to be possible.
- When the keyless locking or closing * functions are used, three audible signals will sound if the key is not close enough to the tailgate.

Interrupting closing

- Press the button on the dashboard.
- Press the button on the key.
- Press the close button on the underside of the tailgate^[1].
- Press the rubberized pressure plate on the underside of the tailgate's outer handle.
- Using a foot movement*.

Tailgate movement is interrupted and stops. The tailgate can then be opened or closed manually.

If the tailgate stops near the closed position, it will open the next time it is activated.

Pinch protection

If anything obstructs the tailgate with enough force to prevent it from opening or closing, pinch protection will be activated.

- When opening the tailgate will stop moving and an audible signal will sound.
- When closing the tailgate will stop, a long audible signal will sound and the tailgate will return to the programmed maximum opening position.

/ Warning

Be aware of the risk of injury when opening and closing.

Before opening or closing, make sure that no one is near the tailgate's range of motion. Serious injury could occur.

Always operate the tailgate with caution.

Preloaded springs

Preloaded springs for the power tailgate.

✓ Warning

Do not attempt to open or access the preloaded springs in the power tailgate struts. They are preloaded with high pressure and can cause injury if opened.

- * Option/accessory.
- ^[1] Vehicles with power-operated trunk lid.
- ^[2] Vehicles with keyless locking/unlocking and power-operated tailgate.
- ^[3] All doors must be closed for the vehicle to lock.

9.2.1.7. Keyless tailgate unlock*

With keyless locking and unlocking, the tailgate can be unlocked by lightly touching the rubberized button underneath the tailgate handle.

(i) Note

One of the vehicle's keys must be within range behind the vehicle for unlocking to be possible.

The tailgate is held closed by an electronic locking mechanism.

To open:

- 1 Lightly press the rubberized pressure plate on the underside of the tailgate handle.
- > The lock will disengage.
- 2 Lift the outer handle to open the tailgate.

(!) Important

- Handle the rubber plate carefully to help prevent damage to its electrical connections. Very little force is needed for activation.
- Use the handle to lift do not apply force to the rubberized pressure plate.

The tailgate can also be opened by making a foot movement* under the rear bumper; see the separate section.

Do not drive with the tailgate open. Toxic exhaust fumes can be sucked into the vehicle through the cargo compartment.

* Option/accessory.

9.2.2. Keys

The vehicle's keys lock and unlock the vehicle. When a key is in the front section of the passenger compartment, the vehicle can be started.

Available key types are the standard key, the buttonless key (Key Tag)*, and Care Key.^[1]

The standard key and the Care Key are equipped with buttons. Additional keys than those included as standard can be ordered. For vehicles equipped with keyless locking and unlocking*, a smaller, lighter and buttonless key (Key Tag) can be purchased as an accessory.

To start the vehicle, a key must be in the front section of the passenger compartment.

For vehicles equipped with keyless locking and unlocking (Passive Entry)*, the engine can be started with the key anywhere in the vehicle.

The keys can be linked to different driver profiles to store personal settings in the vehicle. Care Key is connected to a specific driver profile that is more restricted.

/ Warning

The key contains a button cell battery. Keep new and used batteries out of the reach of children. If batteries are swallowed, they can cause serious injury.

If any damage is detected, e.g. if the battery cover cannot be closed properly, do not use the product. Keep defective products out of the reach of children.

Key buttons

The key has four buttons, one on the left side and three on the right.

Locking – Press once to lock the doors, tailgate and fuel filler door and arm the alarm.

Press and hold to close all windows.

Press and hold to open all windows at the same time. This can be used to e.g. quickly air out the vehicle in hot weather.

- Tailgate Unlock and disarm the tailgate only. On vehicles equipped with the power tailgate*, press and hold to automatically open the tailgate. Press and hold to close an open tailgate (an audible warning signal will be given).
- Panic alarm Used to attract attention in emergency situations. Press and hold the button for at least 3 seconds or press twice within 3 seconds to activate the vehicle's turn signals and horn. To deactivate, wait at least 5 seconds and press the button again. If no action is taken, the panic alarm will deactivate automatically after 3 minutes.

/ Warning

If anyone is left in the vehicle, make sure that power to the power windows and panoramic roof* is cut off by always taking the key with you when you leave the vehicle.

(i) Note

A key that has been locked in the vehicle is temporarily deactivated and cannot be used until the vehicle is unlocked using another valid key.

Button-less key (Key Tag)*

A buttonless key^[2] can be ordered as an accessory for vehicles equipped with the keyless locking and unlocking function. Start and keyless locking and unlocking function in the same way as with the standard key. The key is waterproof up to a depth of ap-

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note. 368 / 1010 prox. 10 meters (30 feet) for up to 60 minutes. It does not have a key blade and the battery cannot be replaced.

Care Key restricted key

A Care Key makes it possible to set a maximum speed limit when the key is being used. This limit is intended to promote safe use of the vehicle, e.g. when it is loaned out.

If the active key is removed from the vehicle

If the key is removed from the vehicle while the engine is running, the warning message **Vehicle key not foundRemoved from vehicle** will be displayed in the instrument panel and an audible signal will sound when the last door is closed.

The message will disappear when the key is returned to the vehicle and the O button on the right-side steering wheel keypad is pressed or when all doors are closed.

Interference

Electromagnetic fields or obstructing objects may interfere with the key's functions for keyless start and keyless locking and unlocking*.

(i) Note

Do not store the vehicle's keys near metal objects or electronic devices (phones, tablets, laptops, chargers, etc.). Keep a distance between them of at least 10-15 cm (4-6 inches).

If you experience interference, use the key's detachable blade to unlock the vehicle. Then place the key in the backup reader in the tunnel console's storage compartment to disarm the alarm and start the vehicle.

(i) Note

To help ensure that the key can be detected by the backup reader, make sure there are no other vehicle keys, metal objects or electronic devices (phones, tablets, laptops, chargers, etc.) in the storage compartment. These objects can interfere with its functioning.

/ Warning

California Proposition 65

Operating, servicing and maintaining a passenger vehicle can expose you to chemicals including engine exhaust, carbon monoxide, phthalates, and lead, which are known to the State of California to cause cancer and birth defects or other reproductive harm. To minimize exposure, avoid breathing exhaust, do not idle the engine except as necessary, service your vehicle in a well ventilated area and wear gloves or wash your hands frequently when servicing your vehicle. For more information go to www.P65Warnings.ca.gov/passenger-vehicle [https://www.p65warnings.ca.gov/products/passenger-vehicle [https://www.p65warnings.ca.gov/products/passenger-vehicle [https://www.p65warnings.ca.gov/products/passenger-vehicle].

* Option/accessory.

^[1] The illustration is generic - details may vary according to vehicle model.

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note.

9.2.3. Locking and unlocking using the key buttons

All doors and tailgate can be locked and unlocked simultaneously using the buttons on the key.

Locking using the key buttons

The illustration is generic.

1 Press the 🖗 button to lock the vehicle.

To activate the locking sequence, the driver's door must be closed^[1]. If any of the other doors or the tailgate are open, they will be locked and the alarm will be armed once they are closed.

(i) Note

A key that has been locked in the vehicle is temporarily deactivated and cannot be used until the vehicle is unlocked using another valid key.

Locking when the tailgate is open

(i) Note

If the vehicle is locked and the tailgate is still open, make sure that the key is not left in the cargo compartment when the tailgate is closed^[1].

Unlocking using the key buttons

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note. 370 / 1010 1 Press the Dutton to unlock the vehicle.

Automatic relocking

If none of the doors or tailgate are opened within two minutes after being unlocked, they will automatically relock. This function reduces the risk of inadvertently leaving the vehicle unlocked.

If the key doesn't work

If the key is not working to lock or unlock the vehicle, its battery may be discharged. Use the detachable key blade to lock/unlock the driver's door instead.

* Option/accessory.

^[1] If the vehicle is equipped with keyless locking/unlocking*, all side doors must be closed.

9.2.4. Unlock settings

You can use the button on the key to change the setting for unlocking. Either all doors unlock when the button is pressed, or pressing the button once unlocks only the driver's door and a second press unlocks the rest of the doors.

The settings made here also affect central locking using the inside door handle.

- 1 Tap Settings in the center display's Top view.
- 2 Tap My Car → Locking → Remote and Interior Unlock.
- 3 Select alternative:
 - All Doors unlocks all doors at the same time.
 - Single Door unlocks the driver's door. Press the key unlock button twice to unlock all doors.

9.2.5. Unlocking the tailgate using the key button

There is a button on the key for unlocking only the tailgate.

- 1 Press the 🗁 button on the key.
- The tailgate is unlocked and can be opened from the outside.
 The side doors remain locked and armed. The lock and alarm indicator on the dashboard will go out to indicate that the vehicle is no longer fully locked.

If the tailgate is not opened within 2 minutes, it will be relocked and the alarm armed.

Power tailgate*

- 1 Press and hold the key's ⇔ button for a few seconds.
- > The tailgate will unlock and open. However, the side doors will remain locked and armed.

(i) Note

If the power tailgate system * has been working continuously for too long, it will be switched off to help prevent overheating. It can be used again after a few minutes.

* Option/accessory.

9.2.6. Locking and unlocking with detachable key blade

The detachable key blade can be used to unlock one of the vehicle's doors from the outside, for example if the key's battery is discharged.

Unlocking using the key blade

(i) Note

When the door is unlocked using the detachable key blade and then opened, the alarm will be triggered. The alarm must be deactivated manually - it can be a good idea to read the section about this before opening the vehicle.

E)

Pull the handle on the left-side front door to its end position.

- The keyhole should now be visible inside the handle. >
- 2 2

Insert the key.

3 3

Turn the key clockwise 45 degrees so that the key is pointing straight rearward.

4 4

Turn the key back 45 degrees to the original position and remove it.

> The door can be opened using the handle.

Locking using the key blade

The front left door can also be locked using the detachable key blade.

The other doors have a lock mechanism in the side of the door that must be pushed in using the key blade. The doors will then be mechanically locked and cannot be opened from the outside. The doors can still be opened from inside the vehicle.

Manual door lock. This is not the child lock.

- 1 Remove the detachable key blade from the key with buttons.
- 2 Insert the key blade into the opening for the lock mechanism.
- **3** Push in the key until it stops, about 12 mm (0.5 inch).

A The door can be opened from both the outside and the inside.

B The door cannot be opened from the outside. To return to position A, open the door using the inside door handle.

(i) Note

- The door's lock controls only lock that specific door, not all doors simultaneously.
- A manually locked rear door with an activated child lock cannot be opened from either the outside or the inside. It can be unlocked using the key buttons, central locking button, keyless locking system* or through the Volvo Cars app.

* Option/accessory.

9.2.7. Automatic locking when driving

For safety reasons, the doors and tailgate automatically lock when the vehicle starts driving.

The doors can still be opened from the inside during automatic locking when driving. Depending on lock settings, either all doors will be unlocked or only the door being opened.

(i) Note

The child lock should be used to help prevent a rear door from being opened from the inside.

(i) Note

For safety reasons, all of the vehicle's doors will unlock in the event of a collision. This will only happen if one of the safety systems has been triggered.

9.2.8. Setting maximum opening height for the power tailgate *

The tailgate can be set to stop opening at a certain height, for example if the vehicle is parked in a garage with a low ceiling.

Setting maximum opening height

- 1 Open the tailgate manually to the desired opening height.
- 2 Press the corr button on the lower edge of the tailgate and hold it for about 3 seconds.
- > Two audio signals will sound to indicate that the position has been stored.

(i) Note

It is not possible to program an opening position lower than half-open tailgate.

Resetting maximum opening position

- 1 Open the tailgate manually to the fully open position.
- 2 Press the 🗢 button on the lower edge of the tailgate and hold it for about 3 seconds.
- > Two audio signals will sound to indicate that the stored position has been erased.
- * Option/accessory.

9.2.9. Locking and unlocking from inside the vehicle

The doors and tailgate can be locked and unlocked from inside the vehicle using the central lock buttons in the front doors.

Central locking

Button with indicator light for locking and unlocking in front door.

Unlocking using the front door buttons

1 Press the 1 button to unlock all side doors and the tailgate.

Alternative unlocking method

Alternative unlocking method using side door opening handle^[1].

1 Pull either of the side door inside opening handles and release.

> Depending on the unlock settings, either all doors will be unlocked or just the selected door will be unlocked and opened.

Locking using the front door buttons

- 1 Press the 🔁 button (both front doors must be closed).
- > All doors and the tailgate will lock.

Locking using the rear door button*

Button with indicator light for locking/unlocking in rear door.

The lock buttons in the rear doors lock/unlock that particular door.

Unlocking the rear door

- Pull the opening handle to unlock the rear door. 1
- **2** Pull the opening handle again to open the rear door^[2].

^[1] The illustration is generic - details may vary according to vehicle model.

- * Option/accessory.
- ^[2] If the child lock is not activated.

9.2.10. Unlocking the tailgate from inside the vehicle

The tailgate can be unlocked from inside the vehicle by pressing the button on the dashboard, to the side of the steering wheel.

- 1 Briefly press the \bigcirc button on the dashboard.
- > The tailgate is unlocked and can be opened from the outside.

With the optional power tailgate*:

- 1 Press and hold the \bigcirc button on the dashboard for a few seconds.
- > The tailgate will open.

(i) Note

If the power tailgate system * has been working continuously for too long, it will be switched off to help prevent overheating. It can be used again after a few minutes.

* Option/accessory.

9.2.11. Private Locking*

The private locking function restricts access to certain areas of the vehicle even when using the key. This enables you to use these areas for private storage when the vehicle or key are handed over to workshop

378 / 1010

personnel, valets, etc.

When private locking is activated, the tailgate cannot be opened, which prevents access to the space under the cargo compartment floor.

The button for private locking is located in the center display's Function view. Current status, **Private Locking Unlocked** or **Private Locking Locked**, is shown.

* Option/accessory.

9.2.12. Activating and deactivating private locking*

Private locking is activated using the function button in the center display and a PIN code.

(i) Note

For the valet lock function to be activated the car must be in at least ignition mode I.

Two codes are used for private locking:

- A security code, which is created the first time the function is used.
- A PIN code, which is changed each time the function is activated.

Entering security code before initial use

The first time the function is used, a security code must be selected. This code can then be used to deactivate private locking if the selected PIN code has been forgotten or lost. The security code functions as a PUK (security) code for all PIN codes used for private locking.

Save the security code in a safe place.

To create a security code:

1 Tap the button for private locking in Function view.

- > A pop-up window will appear.
- 2 Enter the desired security code and press **Confirm**.
- > The security code is saved. The private locking function is now ready for activation.

Activating private locking

1 Tap the button for private locking in Function view.

- > A pop-up window will appear.
- 2 Enter the code you would like to use to unlock the tailgate and tap Confirm.

Deactivating private locking

1 Tap the button for private locking in Function view.

- > A pop-up window will appear.
- 2 Enter the code used for locking and tap Confirm.

Forgotten PIN code

If you have forgotten your PIN code or entered it incorrectly more than three times, the security code can be used to deactivate private locking.

If the vehicle is unlocked via Volvo On Call, private locking will be automatically deactivated.

Forgotten security code

If you have forgotten your security code, contact an authorized Volvo retailer for assistance deactivating private locking.

* Option/accessory.

9.2.13. Locking and unlocking

The vehicle can be locked and unlocked in several different ways.

These are:

- with the key buttons Ð
- with the detachable key blade (if the battery in the key is discharged)
- keyless* (the vehicle detects when a key is within range)
- from inside the vehicle using the lock controls in the doors .
- with the Volvo Cars app* Ð
- Remote Door Unlock with Volvo On Call* .
- automatic locking when the vehicle is driving.

(i) Note

For safety reasons, all of the vehicle's doors will unlock in the event of a collision. This will only happen if one of the safety systems has been triggered.

* Option/accessory.

9.2.14. Activating and deactivating child locks

The child locks help prevent the rear doors from being able to be opened from the inside. With the electric child lock, the power windows are also prevented from being operated from the rear seat.

The child lock can be either manual or electric*.

Manual child lock

Manual child lock. This is not the manual door lock.

1 Use the detachable key blade in the key to turn the control.

A The door cannot be opened from the inside.

B The door can be opened from both the outside and the inside.

(i) Note

- The door's knob control only locks that specific door, not both rear doors simultaneously.
- There are no manual child locks on models equipped with electronic child locks.

Electric child lock*

The electric child lock can be activated and deactivated in any ignition mode higher than **0**. The lock can be activated and deactivated up to 2 minutes after the ignition is turned off if no door has been opened.

Button for activation and deactivation.

Rear child lock activated

When the indicator light in the button is lit, the child lock is activated.

If the child lock is activated when the vehicle is switched off, it will remain activated the next time the vehicle is started.

- Rear doors cannot be opened from the inside.
- Rear power windows can only be operated from the driver's door.

Rear child lock deactivated

When the indicator light in the button is off, the child lock is deactivated.

• Rear doors can be opened from the inside and power windows can be operated from the rear seat.

Symbols and messages

Symbol	Message	Meaning
	Rear child lock Activated	The child lock is activated.
6 1	Rear child lock Deactivated	The child lock is deactivated.

* Option/accessory.

9.2.15. Lock indication

The vehicle indicates when it is locked or unlocked. How this is indicated depends on settings for lock indication and door mirrors.

Exterior confirmation

Locking

• The turn signals will flash once and the door mirrors will fold in^[1] to confirm the vehicle is locked.

Unlocking

• The turn signals will flash twice and the door mirrors will fold out^[1] to confirm the vehicle is unlocked.

The tailgate, hood and all doors must be closed for confirmation to be given. If only the driver's door is closed when the vehicle is locked^[2], the vehicle will be locked but the turn signals will only flash to indicate locking when all doors and the tailgate and hood have been closed.

Lock and alarm indicators on the dashboard

The locks and alarm indicator will display the status of the locking system:

- One long flash indicates locking. Ð
- When the vehicle is locked, this will be indicated by short, pulsating flashes.
- Rapid flashing after disabling the alarm indicates that the alarm has been triggered. Ð

Lock button indicators

Front door

Lock buttons with indicator lights in front door.

Illuminated indicator lights in both front door lock buttons indicate that all doors are locked. If any door is opened, the lights in both doors will go out.

Rear door*

Lock button with indicator light in rear door.

Illuminated indicator lights in each door indicate that that particular door is locked. If any door is unlocked and opened, the indicator light in that door will go out. The lights in the other doors will remain illuminated.

Other indicators

The approach lighting and home safe lighting functions may be activated when locking and unlocking.

Folding the door mirrors in/out can also be used to help indicate locking/unlocking.

385 / 1010

- ^[1] Only vehicles with power folding mirrors.
- * Option/accessory.
- ^[2] Not possible with keyless locking*.

9.2.16. Lock confirmation settings

In the center display's settings menu, you can choose how the vehicle will indicate that is locked or unlocked.

Different types of locking response

- 1 Tap Settings in the center display's Top view.
- 2 Tap My Car → Locking.
- **3** Tap Visible Locking Feedback to select when the vehicle should provide a visible response:
 - Lock
 - Unlock
 - Both

Or turn off the function by marking **Off** .

A Audible Locking Feedback option is also available.

Automatic folding of door mirrors * when locking

- 1 Tap Settings in the center display's Top view.
- 2 Tap My Car \rightarrow Mirrors and Convenience.
- 3 Select Fold Mirror When Locked to activate or deactivate the function.

* Option/accessory.

9.3. Alarm

9.3.1. Alarm

The alarm emits sound and light signals if anyone without a valid key attempts to break into the vehicle or interferes with the battery or alarm siren.

Alarm indicator

A red indicator light on the dashboard shows the status of the alarm:

- Indicator off the alarm is disarmed.
- Indicator flashes once every two seconds the alarm is armed.
- The indicator flashes quickly after the alarm has been disabled for up to 30 seconds or until the ignition is put in | mode the alarm has been triggered.

When armed, the alarm will be triggered if:

- the hood, tailgate or any door is opened^[1].
- the battery is disconnected
- the alarm siren is disconnected.

Alarm signals

The following occurs if the alarm is triggered:

- A siren will sound for 30 seconds or until the alarm is turned off.
- The hazard warning flashers will flash for 5 minutes or until the alarm is turned off.

If the reason the alarm was triggered is not rectified, the alarm cycle will repeat up to 10 times^[1].

Symbols and messages

Symbol	Message	Meaning
< G	Alarm system failureService required	Contact a workshop – an authorized Volvo workshop is recommended.

(i) Note

Do not attempt to repair or alter any of the components in the alarm system yourself. Any such attempt could affect the terms and conditions of your insurance policy.

^[1] Certain markets only.

9.3.2. Arming and disarming the alarm

The alarm is armed when the vehicle is locked and disarmed when the vehicle is unlocked. The alarm can also be disarmed without a functioning key.

Arming and disarming the alarm

The alarm is armed when the vehicle is locked and disarmed when the vehicle is unlocked.

(i) Note

It is not possible to lock the vehicle without activating the alarm.

Disarming the alarm without a functioning key

The vehicle can be unlocked and disarmed even if the key is not functioning, e.g. if its battery is discharged.

- 1 Open the driver's door using the detachable key blade.
- > This will trigger the alarm.

Place the key on the key symbol in the backup reader in the tunnel console's storage compartment.

3 Press the start button.

> The alarm will be disarmed.

Turning off a triggered alarm

1 Press the unlock button on the key or select ignition mode | by pressing the start button.

10.1. Cruise Control functions

10.1.1. Cruise control

10.1.1.1. Cruise control

Cruise Control (CC^[1]) can help the driver maintain an even speed to provide a more relaxing driving experience on highways and long, straight roads with even traffic flows.

Using engine braking instead of applying the brakes

Cruise Control regulates speed by lightly applying the brakes. On downgrades, it can sometimes be desirable to roll a bit faster and let speed be reduced instead by engine braking alone. The driver can temporarily disengage the Cruise Control braking function.

To disengage CC:

- 1 Press the accelerator pedal about halfway down and then release it.
- Cruise Control will automatically disengage the automatic brake function and speed will only be reduced using the engine braking function.

/ Warning

- The function is supplementary driver support intended to facilitate driving and help make it safer it cannot handle all situations in all traffic, weather and road conditions.
- The driver is advised to read all sections in the Owner's Manual about this function to learn of its limitations, which the driver must be aware of before using the function.
- Driver support functions are not a substitute for the driver's attention and judgment. The driver is always responsible for ensuring the vehicle is driven in a safe manner, at the appropriate speed, with an appropriate distance to other vehicles, and in accordance with current traffic rules and regulations.

^[1] Cruise Control

10.1.1.2. Cruise control standby mode

Cruise control (CC^[1]) can be deactivated and put in standby mode. This can take place automatically or be due to driver intervention.

Standby mode means that the function is selected in the instrument panel but not activated. The symbol in the instrument panel is not illuminated and cruise control is not regulating the speed.

Standby mode due to action by the driver

Cruise control will be deactivated and put in standby mode if any of the following occurs:

- The brakes are applied.
- The gear selector is moved to **N**.
- The vehicle is driven faster than the set speed for more than 1 minute.

The driver must then control the vehicle's speed.

Temporarily increasing speed using the accelerator pedal, e.g. when passing another vehicle, will not affect the setting. The vehicle will return to the set speed when the accelerator pedal is released.

Automatic standby mode

The function may automatically go into standby mode if one of the following occurs:

- The wheels lose traction.
- The engine speed (rpm) is too low/high.
- The temperature in the brake system becomes too high.
- The vehicle's speed goes below 30 km/h (20 mph).

The driver must then control the vehicle's speed.

^[1] Cruise Control

10.1.1.3. Adjusting set speed for speed-controlling functions

It is possible to adjust set speeds for the cruise control, Adaptive Cruise Control* and Pilot Assist* functions.

+ : Increases the set speed
 - : Reduces the set speed
 Set speed

- 1 Change a set speed by pressing the + (1) or (2) buttons briefly or by pressing and holding them:
 - Brief press: Each press changes the speed in +/- 5 km/h (+/- 5 mph) increments.
 - Press and hold: Release the button when the set speed indicator (3) has moved to the desired speed.

> The most recently set speed will be stored.

(i) Note

For vehicles without Pilot Assist, speed instead increases by +/-1 km/h (+/-1 mph) each time the button is pressed.

Pressing the accelerator pedal

If speed is increased by depressing the accelerator pedal while pressing the + (1) button on the steering wheel, the vehicle's speed when the button is pressed will be stored as the set speed.

Temporarily increasing speed using the accelerator pedal, e.g. when passing another vehicle, will not affect the setting. The vehicle will return to the set speed when the accelerator pedal is released.

Possible speed

Automatic transmission

The driver support functions can follow another vehicle at speeds from a standstill up to 180 km/h (112 mph).

Pilot Assist can provide steering assistance from near-stationary speeds up to 140 km/h (87 mph).

The lowest speed that can be set is 30 km/h (20 mph). When following another vehicle, ACC can monitor that vehicle's speed and slow your own vehicle down to a standstill, but it is not possible to set speeds lower than 30 km/h (20 mph).

* Option/accessory.

10.1.2. Adaptive Cruise Control

10.1.2.1. Adaptive Cruise Control*

Adaptive Cruise Control^[1] (ACC^[2]) can help the driver to maintain a constant speed, combined with a preset time interval to the vehicle in front.

The camera/radar sensor measures the distance to the vehicle ahead.

Adaptive Cruise Control can help provide a more relaxed driving experience on long trips on highways or long, straight roads with even traffic flows.

The driver sets a speed and a time interval to the vehicle ahead. If the camera/radar sensor detects a slower-moving vehicle ahead, your vehicle's speed will be automatically adapted according to the set time interval to the vehicle ahead. When there are no longer slower-moving vehicles ahead, the vehicle will return to the set speed.

Adaptive Cruise Control is designed to:

- smoothly regulate speed. The driver must apply the brakes in situations requiring immediate braking. For example, when there are great differences in speed between vehicles or if the vehicle ahead brakes suddenly. Due to limitations in the radar sensor, braking may occur unexpectedly or not at all.
- follow a vehicle ahead in the same lane and maintain a time interval to that vehicle set by the driver. If the radar unit does . not detect a vehicle ahead, it will instead maintain the speed set by the driver. This will also happen if the speed of the vehicle ahead exceeds the set speed for your vehicle.

Steep roads and/or heavy loads

Adaptive Cruise Control is primarily intended to be driven on flat roads. The function may not be able to maintain the correct time interval to the vehicle ahead when driving down steep downgrades. The driver should be extra attentive and prepared to apply the brakes.

Do not use Adaptive Cruise Control if the vehicle is carrying a heavy load or towing a trailer.

/ Warning

- This is not a collision avoidance system. The driver is always responsible and must intervene if the system fails to detect a vehicle ahead.
- The function does not brake consistently for people or animals and does not brake for small vehicles, such as bicycles and motorcycles. Similarly, it does not brake for low trailers, oncoming, slow-moving or stationary vehicles and objects.
- Do not use the function in demanding situations, such as in city traffic, at intersections, on slippery surfaces, with a lot of water or slush on the road, in heavy rain/snow, in poor visibility, on winding roads, or on on/off ramps.

/ Warning

- The function is supplementary driver support intended to facilitate driving and help make it safer it cannot handle all situations in all traffic, weather and road conditions.
- The driver is advised to read all sections in the Owner's Manual about this function to learn of its limitations, which the driver must be aware of before using the function.
- Driver support functions are not a substitute for the driver's attention and judgment. The driver is always responsible for ensuring the vehicle is driven in a safe manner, at the appropriate speed, with an appropriate distance to other vehicles, and in accordance with current traffic rules and regulations.

(i) Note

The function uses the vehicle's camera and radar sensor, which has certain general limitations.

() Important

Only a workshop may perform maintenance on driver support components – an authorized Volvo workshop is recommended.

- * Option/accessory.
- ^[1] Depending on market, this function can be either standard or optional.
- ^[2] Adaptive Cruise Control

10.1.2.2. Symbols and messages for Adaptive Cruise Control*

A number of symbols and messages relating to Adaptive Cruise Control^[1] (ACC^[2]) may be displayed. Several examples are provided below.

Symbol	Message	Meaning
3	The symbol is illuminated	The vehicle is maintaining the stored speed.
	Adaptive Cruise Contr. Unavailable The symbol is extinguished	Adaptive Cruise Control is in standby mode.
	Adaptive Cruise Contr. Service required The symbol is extinguished	The system is not functioning as intended. Contact a workshop – an authorized Volvo workshop is recommended.
fi	Windscreen sensor Sensor blocked, see Owner's manual	Clean the windshield in front of the camera and radar sensors.

A text message can be erased by briefly pressing the O button in the center of the right-side steering wheel keypad.

If the message persists, contact a workshop. An authorized Volvo workshop is recommended.

- * Option/accessory.
- ^[1] Depending on market, this function can be either standard or optional.
- ^[2] Adaptive Cruise Control

10.1.2.3. Adaptive Cruise Control* standby mode

Adaptive Cruise Control^[1] (ACC^[2]) can be deactivated and put in standby mode. This can take place automatically or be due to driver intervention.

Standby mode means that the function is selected in the instrument panel but not activated. In standby mode, Adaptive Cruise Control will not regulate speed or distance to the vehicle ahead.

Standby mode due to action by the driver

Adaptive Cruise Control will be deactivated and put in standby mode if any of the following occurs:

- The brakes are applied.
- The gear selector is moved to N.
- The vehicle is driven faster than the set speed for more than 1 minute.

Temporarily increasing speed using the accelerator pedal, e.g. when passing another vehicle, will not affect the setting. The vehicle will return to the set speed when the accelerator pedal is released.

✓ Warning

- If Adaptive Cruise Control is in standby mode, the driver must intervene and regulate both speed and distance to the vehicle ahead.
- If the vehicle comes too close to a vehicle ahead when Adaptive Cruise Control is in standby mode, the driver can be warned of the short distance by the Distance Alert* function.

Automatic standby mode

/ Warning

With automatic standby mode, the driver is warned by an audible signal and a message in the instrument panel.

• The driver must then regulate vehicle speed, apply the brakes if necessary, and maintain a safe distance to other vehicles.

The function may automatically go into standby mode if one of the following occurs:

- One of the systems that Adaptive Cruise Control is dependent on stops working, such as Electronic Stability Control (ESC^[3]).
- The driver opens the door.
- The driver unbuckles the seat belt.
- The engine speed (rpm) is too low/high.
- One or more of the wheels lose traction.
- The brake temperature is high.
- The parking brake is applied.
- The camera and radar unit is covered by snow or heavy rain (the camera lens/radar waves are blocked).
- Your vehicle's speed goes below 5 km/h (3 mph) and ACC cannot determine if the vehicle ahead is stationary or if it is another object, e.g. a speed bump.
- Your vehicle's speed goes below 5 km/h (3 mph) and the vehicle ahead turns so that ACC no longer has a vehicle to follow.
- * Option/accessory.
- ^[1] Depending on market, this function can be either standard or optional.
- ^[2] Adaptive Cruise Control
- ^[3] Electronic Stability Control

10.1.2.4. Auto-hold braking with speed-controlling functions

The driver support functions Adaptive Cruise Control* and Pilot Assist* have a special brake function in slow traffic and while stationary. In certain situations, the parking brake will be applied to keep the vehicle at a standstill.
Braking function in slow traffic and at a standstill

In slow-moving, stop-and-go traffic or when stopped at a traffic light, driving will resume automatically if the vehicle is stopped for less than approx. 3 seconds. If it takes more than 3 seconds for the vehicle ahead to begin moving again, the driver support function will go into standby mode and the auto-hold brake function will activate.

- 1 The function can be reactivated by:
 - Pressing the \bigcirc^{\dagger} button on the steering wheel keypad.
 - Pressing the accelerator pedal.

> The function will resume following the vehicle ahead if it begins to move within approx. 6 seconds.

∕ ./\ Warning

A noticeable increase in speed may follow when the speed is resumed with the \circlearrowleft steering wheel button.

/ Warning

The driver support system only issues a warning for obstacles detected by its radar sensor – thus, a warning may come after a delay or not at all.

• Never wait for a warning or assistance. Apply the brakes when necessary.

(i) Note

Driver support can keep the vehicle stationary for no more than 10 minutes – after that time the parking brake is applied and the function is deactivated.

The parking brake must be released before driver support can be reactivated.

Deactivation of the Auto-hold brake function

In certain situations, auto-hold will be deactivated when the vehicle is at a standstill and the function will go into standby mode. This means that the brakes will be released and the vehicle could begin to roll. The driver must actively apply the brakes to keep the vehicle stationary.

This can occur if:

- The driver depresses the brake pedal.
- The parking brake is applied.
- The gear selector is moved to the P, N or R position.
- The driver puts Adaptive Cruise Control or Pilot Assist in standby mode.

Auto Activate Parking Brake

The parking brake will be applied if the function is keeping the vehicle stationary using the brakes and:

- The driver opens the door or unbuckles his/her seat belt.
- The function has kept the vehicle at a standstill for more than approx. 10 minutes.
- The brakes overheat.
- The driver switches off the engine.
- * Option/accessory.

10.1.2.5. Adjusting set speed for speed-controlling functions

It is possible to adjust set speeds for the cruise control, Adaptive Cruise Control* and Pilot Assist* functions.

- + : Increases the set speed
 : Reduces the set speed
 Set speed
- 1 Change a set speed by pressing the + (1) or (2) buttons briefly or by pressing and holding them:
 - **Brief** press: Each press changes the speed in +/- 5 km/h (+/- 5 mph) increments.
 - Press and hold: Release the button when the set speed indicator (3) has moved to the desired speed.
- > The most recently set speed will be stored.

(i) Note

For vehicles without Pilot Assist, speed instead increases by +/-1 km/h (+/-1 mph) each time the button is pressed.

Pressing the accelerator pedal

If speed is increased by depressing the accelerator pedal while pressing the + (1) button on the steering wheel, the vehicle's speed when the button is pressed will be stored as the set speed.

Temporarily increasing speed using the accelerator pedal, e.g. when passing another vehicle, will not affect the setting. The vehicle will return to the set speed when the accelerator pedal is released.

Possible speed

Automatic transmission

The driver support functions can follow another vehicle at speeds from a standstill up to 180 km/h (112 mph).

Pilot Assist can provide steering assistance from near-stationary speeds up to 140 km/h (87 mph).

The lowest speed that can be set is 30 km/h (20 mph). When following another vehicle, ACC can monitor that vehicle's speed and slow your own vehicle down to a standstill, but it is not possible to set speeds lower than 30 km/h (20 mph).

* Option/accessory.

10.1.2.6. Switching target vehicles with speed-controlling functions

At certain speeds, vehicles with automatic transmissions and the driver support functions Adaptive Cruise Control* and Pilot Assist* can switch target vehicles.

Switching target vehicles

If the target vehicle ahead turns suddenly, there may be stationary traffic ahead.

When driver support is actively following another vehicle at speeds **under** 30 km/h (20 mph) and switches targets from a moving vehicle to a stationary vehicle, driver support will brake for the stationary vehicle.

/ Warning

When driver support follows another vehicle at speeds **over** approx. 30 km/h (20 mph) and changes target vehicle – from a moving vehicle to a stationary one – driver support will **ignore** the stationary vehicle and instead accelerate to the stored speed.

• The driver must then intervene and apply the brakes.

Automatic standby mode when switching targets

Driver support disengages and goes into standby mode if:

- your vehicle's speed goes under 5 km/h (3 mph) and driver support cannot determine if the target vehicle is stationary or if it is another object, e.g. a speed bump.
- your vehicle's speed goes under 5 km/h (3 mph) and the vehicle ahead turns so that driver support no longer has a vehicle to follow.
- * Option/accessory.

10.1.2.7. Setting time interval to the vehicle ahead

The time interval to the vehicle ahead can be set for the functions Adaptive Cruise Control* and Pilot Assist*.

Controls for setting a time interval.

1 Reduce the time interval

- 2 Increase the time interval
- Oistance indicator

Press the (1) or (2) button to decrease or increase the time interval.

> The distance indicator (3) shows the current time interval.

Different time intervals to the vehicle ahead can be selected and are shown in the instrument panel as 1–5 horizontal bars. The more bars, the longer the time interval. One bar represents an interval of approx. 1 second to the vehicle ahead. 5 bars repre-

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note. 401 / 1010 sents approx. 3 seconds.

In order to help your vehicle follow the vehicle ahead as smoothly and comfortably as possible, Adaptive Cruise Control allows the time interval to vary noticeably in certain situations. At low speeds, when the distance to the vehicle ahead is short, Adaptive Cruise Control increases the time interval slightly.

(i) Note

When the symbol in the instrument panel shows a vehicle and a steering wheel, Pilot Assist follows a vehicle ahead at a preset time interval.

When only a steering wheel is shown, there is no vehicle ahead within a reasonable distance.

(i) Note

When the symbol in the instrument panel shows two vehicles, Adaptive Cruise Control is following the vehicle ahead at a preset time interval.

When only one vehicle is shown, there is no vehicle ahead within a reasonable distance.

(i) Note

- The greater the vehicles' speed, the greater the distance between them for a set time interval.
- Only use the time intervals permitted by local traffic regulations.
- If driver support does not seem to respond with a speed increase when activated, it may be because the time interval to the vehicle ahead is shorter than the set time interval.

/ Warning

- Only use a time interval suitable for the current traffic conditions.
- The driver should be aware that short time intervals give them limited time to react and act to any unforeseen traffic situation.

* Option/accessory.

10.1.2.8. Collision risk warning from speed-controlling functions

The driver support systems Adaptive Cruise Control* and Pilot Assist* can help alert the driver if the distance to the vehicle ahead suddenly decreases to an unsafe distance.

Collision warning audible signal and symbol

- 1 Audible signal at risk of collision
- 2 Collision warning symbol
- 3 Camera and radar unit distance monitoring

Adaptive Cruise Control and Pilot Assist use approx. 40% of the braking capacity. If a situation requires more braking force than driver support can provide, and if the driver does not apply the brakes, a warning light and audible warning signal will be activated to alert the driver that immediate action is required.

Warning

The driver support system only issues a warning for vehicles detected by its radar unit – thus, a warning may come after a delay or not at all. Never wait for a warning. Apply the brakes when necessary.

* Option/accessory.

10.1.3. Pilot Assist

10.1.3.1. Auto-hold braking with speed-controlling functions

The driver support functions Adaptive Cruise Control* and Pilot Assist* have a special brake function in slow traffic and while stationary. In certain situations, the parking brake will be applied to keep the vehicle at a standstill.

Braking function in slow traffic and at a standstill

In slow-moving, stop-and-go traffic or when stopped at a traffic light, driving will resume automatically if the vehicle is stopped for less than approx. 3 seconds. If it takes more than 3 seconds for the vehicle ahead to begin moving again, the driver support function will go into standby mode and the auto-hold brake function will activate.

- **1** The function can be reactivated by:
 - Pressing the \uparrow button on the steering wheel keypad.
 - Pressing the accelerator pedal.
- > The function will resume following the vehicle ahead if it begins to move within approx. 6 seconds.

✓ Warning

A noticeable increase in speed may follow when the speed is resumed with the $\, \mho \,$ steering wheel button.

/ Warning

The driver support system only issues a warning for obstacles detected by its radar sensor – thus, a warning may come after a delay or not at all.

• Never wait for a warning or assistance. Apply the brakes when necessary.

(i) Note

Driver support can keep the vehicle stationary for no more than 10 minutes – after that time the parking brake is applied and the function is deactivated.

The parking brake must be released before driver support can be reactivated.

Deactivation of the Auto-hold brake function

In certain situations, auto-hold will be deactivated when the vehicle is at a standstill and the function will go into standby mode. This means that the brakes will be released and the vehicle could begin to roll. The driver must actively apply the brakes to keep the vehicle stationary.

This can occur if:

- The driver depresses the brake pedal.
- The parking brake is applied.
- The gear selector is moved to the P, N or R position.
- The driver puts Adaptive Cruise Control or Pilot Assist in standby mode.

Auto Activate Parking Brake

The parking brake will be applied if the function is keeping the vehicle stationary using the brakes and:

- The driver opens the door or unbuckles his/her seat belt.
- The function has kept the vehicle at a standstill for more than approx. 10 minutes.
- The brakes overheat.
- The driver switches off the engine.
- * Option/accessory.

10.1.3.2. Adjusting set speed for speed-controlling functions

It is possible to adjust set speeds for the cruise control, Adaptive Cruise Control* and Pilot Assist* functions.

- + : Increases the set speed
 : Reduces the set speed
 Set speed
 - 1 Change a set speed by pressing the + (1) or (2) buttons briefly or by pressing and holding them:
 - Brief press: Each press changes the speed in +/- 5 km/h (+/- 5 mph) increments.
 - Press and hold: Release the button when the set speed indicator (3) has moved to the desired speed.
 - > The most recently set speed will be stored.

(i) Note

For vehicles without Pilot Assist, speed instead increases by +/-1 km/h (+/-1 mph) each time the button is pressed.

Pressing the accelerator pedal

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note. 405 / 1010 If speed is increased by depressing the accelerator pedal while pressing the + (1) button on the steering wheel, the vehicle's speed when the button is pressed will be stored as the set speed.

Temporarily increasing speed using the accelerator pedal, e.g. when passing another vehicle, will not affect the setting. The vehicle will return to the set speed when the accelerator pedal is released.

Possible speed

Automatic transmission

The driver support functions can follow another vehicle at speeds from a standstill up to 180 km/h (112 mph).

Pilot Assist can provide steering assistance from near-stationary speeds up to 140 km/h (87 mph).

The lowest speed that can be set is 30 km/h (20 mph). When following another vehicle, ACC can monitor that vehicle's speed and slow your own vehicle down to a standstill, but it is not possible to set speeds lower than 30 km/h (20 mph).

* Option/accessory.

10.1.3.3. Switching target vehicles with speed-controlling functions

At certain speeds, vehicles with automatic transmissions and the driver support functions Adaptive Cruise Control* and Pilot Assist* can switch target vehicles.

Switching target vehicles

If the target vehicle ahead turns suddenly, there may be stationary traffic ahead.

When driver support is actively following another vehicle at speeds **under** 30 km/h (20 mph) and switches targets from a moving vehicle to a stationary vehicle, driver support will brake for the stationary vehicle.

/ Warning

When driver support follows another vehicle at speeds **over** approx. 30 km/h (20 mph) and changes target vehicle – from a moving vehicle to a stationary one – driver support will **ignore** the stationary vehicle and instead accelerate to the stored speed.

• The driver must then intervene and apply the brakes.

Automatic standby mode when switching targets

Driver support disengages and goes into standby mode if:

- your vehicle's speed goes under 5 km/h (3 mph) and driver support cannot determine if the target vehicle is stationary or if it is another object, e.g. a speed bump.
- your vehicle's speed goes under 5 km/h (3 mph) and the vehicle ahead turns so that driver support no longer has a vehicle to follow.
- * Option/accessory.

10.1.3.4. Pilot Assist*

Pilot Assist^[1] can help the driver keep the vehicle in the current traffic lane and maintain an even speed and a set time interval to the vehicle ahead.

The camera/radar sensor monitors the distance to the vehicle ahead and detects lane markings.

- 1 Camera and radar sensor
- 2 Distance monitor
- **3** Lane marker line monitors

Get to know Pilot Assist

Pilot Assist helps to steer the vehicle, and you may need to drive a few miles with Pilot Assist before you feel completely at home with the function. It is important to be familiar with all of the function's applications and limitations in order to take advantage of all it has to offer.

The Pilot Assist function is primarily intended for use on highways and other major roads where it can help provide a more comfortable and relaxing driving experience.

The driver sets the desired speed and distance to the vehicle ahead. Pilot Assist monitors the distance to the vehicle ahead and the traffic lane's side markers using the camera. The system maintains the set time interval to the vehicle ahead by automatically adjusting your vehicle's speed and keeps your vehicle in its lane by providing steering assistance.

Pilot Assist regulates speed by accelerating and braking. It is normal for the brakes to emit a slight sound when they are being used to adjust speed.

Pilot Assist is designed to:

- smoothly regulate speed. The driver must apply the brakes in situations requiring immediate braking. For example, when there are great differences in speed between vehicles or if the vehicle ahead brakes suddenly. Due to limitations in the camera and radar sensor, braking may occur unexpectedly or not at all.
- follow a vehicle ahead in the same lane and maintain a time interval to that vehicle set by the driver. If the radar sensor does not detect a vehicle ahead, it will instead maintain the speed set by the driver. This will also happen if the speed of the vehicle ahead exceeds the set speed for your vehicle.

The vehicle's position in the traffic lane

When Pilot Assist helps to steer, it attempts to position the vehicle halfway between the visible lane marking lines. For a smoother drive, it is a good idea to allow the vehicle to find a good position. The driver can always adjust the position him/herself by increasing steering input. It is important for the driver to make sure the vehicle is positioned safely in the lane.

If Pilot Assist does not position the vehicle appropriately in the lane, the driver should turn off Pilot Assist or switch to Adaptive Cruise Control*.

Steering assistance

The color of the steering wheel symbol indicates the current status of steering assistance:

- Illuminated indicates that steering assistance is active
- Extinguished (as shown in illustration) indicates that steering assistance is deactivated.

Pilot Assist's steering assistance is based on monitoring the direction of the vehicle ahead and the traffic lane's side marker lines. The driver can adjust steering assistance from Pilot Assist at any time and steer in another direction, e.g. to change lanes or avoid obstacles on the road. Resistance will be felt in the steering wheel as long as steering assistance is active.

Temporarily deactivating steering assistance

Warning

Pilot Assist is deactivated automatically and resumes working without prior notice.

When the turn signals are used, Pilot Assist's steering assistance will be temporarily deactivated. When the direction indicator is turned off, steering assistance is reactivated automatically if the lane's edge markings can still be detected.

If Pilot Assist cannot clearly interpret the lane's side marker lines and if the camera is unable for some other reason to clearly interpret the lane, Pilot Assist will temporarily deactivate steering assistance. The speed and distance warning functions will remain active. Steering assistance will resume when the side marker lines can once again be interpreted. In these situations, the driver may be alerted through slight vibrations in the steering wheel that steering assistance is temporarily deactivated.

409 / 1010

In curves and forks in the road

Pilot Assist is designed to interact with the driver. The driver should never wait for steering assistance from Pilot Assist, but instead should always be ready to increase his or her own steering efforts, particularly in curves.

When the vehicle is approaching an off-ramp or a fork in the road, the driver should steer toward the desired lane so that Pilot Assist can detect the desired direction of travel.

Hands on the steering wheel

Pilot Assist only functions if the driver's hands are on the steering wheel. It is also important for the driver to always continue to be active and alert when driving since Pilot Assist is unable to read all situations and may toggle between off and on without prior warning.

Warning

Act immediately if any warning signal is triggered - do not wait for all levels of warnings and assistance from the systems to be provided.

- 1. If Pilot Assist detects that the driver's hands are not on the steering wheel, the system will provide a symbol and a text message in the instrument panel to instruct the driver to actively steer the vehicle.
- 2. If the driver's hands are still detected on the steering wheel after a few seconds have passed the instructions to actively steer the vehicle will be repeated accompanied by an audible signal.
- 3. If Pilot Assist still does not detect the driver's hands on the steering wheel after a few more seconds have passed, the function will be switched off. Pilot Assist must then be restarted by pressing the 🕥 button on the steering wheel. After it is switched off, the function will continue to alert with sound and light signals for up to 5 seconds.

Steep roads and/or heavy loads

Pilot Assist is primarily intended to be driven on flat roads. The function may not be able to maintain the correct time interval to the vehicle ahead when driving down steep downgrades. The driver should be extra attentive and prepared to apply the brakes.

Do not use Pilot Assist if the vehicle is carrying a heavy load or towing a trailer.

(i) Note

Pilot Assist will not provide steering assistance if anything is connected to the towbar connector, for example a trailer or bicycle holder.

Read all warnings before use

✓ Warning

- The function is supplementary driver support intended to facilitate driving and help make it safer it cannot handle all situations in all traffic, weather and road conditions.
- The driver is advised to read all sections in the Owner's Manual about this function to learn of its limitations, which the driver must be aware of before using the function.
- Driver support functions are not a substitute for the driver's attention and judgment. The driver is always responsible for ensuring the vehicle is driven in a safe manner, at the appropriate speed, with an appropriate distance to other vehicles, and in accordance with current traffic rules and regulations.

(i) Note

The function uses the vehicle's camera and radar sensor, which has certain general limitations.

(!) Important

Only a workshop may perform maintenance on driver support components – an authorized Volvo workshop is recommended.

/ Warning

In some situations, Pilot Assist may have trouble helping the driver properly or may be deactivated automatically – we advise against using Pilot Assist in such cases. Examples of such situations include:

- the lane markings are unclear, worn, missing, cross each other, or there are multiple sets of road markings.
- the lane division changes, e.g. when lanes split or merge, and at off-ramps.
- when there is road construction and sudden changes to the road surface, e.g. when the lines may no longer mark the correct route.
- edges or other lines than lane markings are present on or near the road, e.g. curbs, joints or repairs to the road surface, edges of barriers, roadside edges or strong shadows.
- the lane is narrow or winding.
- the lane contains ridges or holes.
- weather conditions are poor, e.g. rain, snow or fog or slush or reduced visibility with poor light conditions, backlighting, wet road surface, etc.

The driver should also note that Pilot Assist has the following limitations:

- High curbs, roadside barriers, temporary obstacles (traffic cones, safety barriers, etc.) are not detected. Alternatively, they may be detected incorrectly as lane markings, with a subsequent risk of contact between the vehicle and such obstacles. The driver is responsible for ensuring that the vehicle maintains a suitable distance from such obstacles.
- The camera and radar sensors do not have the capacity to detect all oncoming objects and obstacles in traffic environments, e.g. potholes, stationary obstacles or objects that completely or partially block the route.
- Pilot Assist does not "see" pedestrians, animals, etc.
- The steering assistance is limited in force, which means that Pilot Assist cannot always help the driver to steer and keep the vehicle within the lane.
- In vehicles equipped with Sensus Navigation*, the function is able to use information from map data, which could cause variations in performance.
- Pilot Assist will be switched off if the speed-dependent power steering wheel resistance is working at reduced power, e.g. during cooling due to overheating.

Pilot Assist should only be used if there are clear lane lines painted on each side of the lane. All other use will increase the risk of contact with nearby obstacles that cannot be detected by the functions.

✓! Warning

- This is not a collision avoidance system. The driver is always responsible and must intervene if the system fails to detect a vehicle ahead.
- The function does not brake consistently for people or animals and does not brake for small vehicles, such as bicycles and motorcycles. Similarly, it does not brake for low trailers, oncoming, slow-moving or stationary vehicles and objects.
- Do not use the function in demanding situations, such as in city traffic, at intersections, on slippery surfaces, with a lot of water or slush on the road, in heavy rain/snow, in poor visibility, on winding roads, or on on/off ramps.

^[1] Depending on market, this function can be either standard or optional.

10.1.3.5. Adaptive Cruise Control and Pilot Assist* displays

The following illustrations show how Adaptive Cruise Control* (ACC^[1]) and Pilot Assist* may be displayed in the instrument panel^[2].

Graphic

Speed

Speed indicators.

1 Set speed

- **2** Speed of the vehicle ahead
- **3** The current speed of your vehicle
- * Option/accessory.
- ^[1] Adaptive Cruise Control
- ^[2] Depending on market, these functions can be either standard or optional.

10.1.3.6. Pilot Assist* symbols and messages

A number of symbols and messages relating to Pilot Assist^[1] may be displayed. Several examples are provided below.

Symbol	Message	Meaning
	Extinguished steering wheel symbol	Indicates that steering assistance is deactivated. When Pilot Assist is providing steering assistance, the steering wheel is illuminated.
	Symbol for hands on the steering wheel	The system cannot detect the driver's hands on the steering wheel. Place your hands on the steering wheel and actively steer the vehicle.
(]i	Windscreen sensor Sensor blocked, see Owner's manual	Clean the windshield in front of the camera and radar sensors.

A text message can be erased by briefly pressing the O button in the center of the right-side steering wheel keypad.

If the message persists, contact a workshop. An authorized Volvo workshop is recommended.

- * Option/accessory.
- ^[1] Depending on market, this function can be either standard or optional.

10.1.3.7. Pilot Assist* standby mode

Pilot Assist^[1] can be deactivated and put in standby mode. This can take place automatically or be due to driver intervention.

Standby mode means that the function is selected in the instrument panel but not activated. In standby mode, Pilot Assist will not regulate the speed or distance to the vehicle ahead or provide steering assistance.

Standby mode due to action by the driver

Pilot Assist will be deactivated and put in standby mode if any of the following occurs:

- The brakes are applied.
- The gear selector is moved to **N**.
- A turn signal is used for more than 1 minute.
- The vehicle is driven faster than the set speed for more than 1 minute.

Automatic standby mode

/ Warning

With automatic standby mode, the driver is warned by an audible signal and a message in the instrument panel.

• The driver must then regulate vehicle speed, apply the brakes if necessary, and maintain a safe distance to other vehicles.

The function may automatically go into standby mode if one of the following occurs.

- One of the systems that Pilot Assist is dependent on stops working, such as Electronic Stability Control^[2].
- The driver's hands are not on the steering wheel.
- The driver opens the door.
- The driver unbuckles the seat belt.
- The engine speed (rpm) is too low/high.
- One or more of the wheels lose traction.
- The brake temperature is high.
- The parking brake is applied.
- The camera and radar unit is covered by snow or heavy rain (the camera lens/radar waves are blocked).
- Your vehicle's speed goes below 5 km/h (3 mph) and Pilot Assist cannot determine if the vehicle ahead is stationary or if it is another object, e.g. a speed bump.
- Your vehicle's speed goes below 5 km/h (3 mph) and the vehicle ahead turns so that Pilot Assist no longer has a vehicle to follow.
- * Option/accessory.
- ^[1] Depending on market, this function can be either standard or optional.
- ^[2] Electronic Stability Control

10.1.3.8. Setting time interval to the vehicle ahead

The time interval to the vehicle ahead can be set for the functions Adaptive Cruise Control* and Pilot Assist*.

Controls for setting a time interval.

1 Reduce the time interval

- 2 Increase the time interval
- Oistance indicator

Press the (1) or (2) button to decrease or increase the time interval.

> The distance indicator (3) shows the current time interval.

Different time intervals to the vehicle ahead can be selected and are shown in the instrument panel as 1–5 horizontal bars. The more bars, the longer the time interval. One bar represents an interval of approx. 1 second to the vehicle ahead. 5 bars repre-

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note.

sents approx. 3 seconds.

In order to help your vehicle follow the vehicle ahead as smoothly and comfortably as possible, Adaptive Cruise Control allows the time interval to vary noticeably in certain situations. At low speeds, when the distance to the vehicle ahead is short, Adaptive Cruise Control increases the time interval slightly.

(i) Note

When the symbol in the instrument panel shows a vehicle and a steering wheel, Pilot Assist follows a vehicle ahead at a preset time interval.

When only a steering wheel is shown, there is no vehicle ahead within a reasonable distance.

(i) Note

When the symbol in the instrument panel shows two vehicles, Adaptive Cruise Control is following the vehicle ahead at a preset time interval.

When only one vehicle is shown, there is no vehicle ahead within a reasonable distance.

(i)Note

- The greater the vehicles' speed, the greater the distance between them for a set time interval.
- Only use the time intervals permitted by local traffic regulations.
- If driver support does not seem to respond with a speed increase when activated, it may be because the time interval to the vehicle ahead is shorter than the set time interval.

Warning

- Only use a time interval suitable for the current traffic conditions.
- The driver should be aware that short time intervals give them limited time to react and act to any unforeseen traffic situation.

* Option/accessory.

10.1.3.9. Differences between Pilot Assist* and Lane **Keeping Aid**

Pilot Assist is a comfort function that can help keep the vehicle in its own lane and maintain the distance to the vehicle in front of you. Lane Keeping Aid^[1] is a function that similarly helps in certain situations to reduce the risk of the vehicle unintentionally veering out of its lane.

Pilot Assist

Pilot Assist can help you to steer your vehicle between the lane markings, as well as maintain a preset speed and distance to the vehicle ahead. The function can also use the lane marking lines to help the driver maintain a favorable position in the lane.

What does Pilot Assist do?

- Can help to keep the vehicle within its lane by assisting steering in some cases.
- Can help to maintain a preset speed or the distance to the vehicle ahead by means of acceleration and braking operations.

How do I know that Pilot Assist is on?

Symbols in the vehicle's instrument panel let you know when the function is on.

When the steering wheel in the middle is not illuminated, Pilot Assist is on but steering assistance is not active.

When the steering wheel is illuminated, Pilot Assist is on and steering assistance is active.

2 When the steering wheel symbol in the instrument panel is illuminated, Pilot Assist is helping you to steer.

Lane Keeping Aid

Lane Keeping Aid can provide steering assistance and/or a warning to the driver when the vehicle is about to leave its lane unintentionally. The function is active between 65-180 km/h (40-112 mph) on roads with clearly visible side markings.

What does Lane Keeping Aid do?

• Lane Keeping Aid can provide the driver with steering assistance, steering the vehicle back into its lane and/or providing warnings using acoustic signals or steering wheel vibration.

How do I know that Lane Keeping Aid is on?

Symbols in the vehicle's instrument panel show the function status.

An extinguished symbol in the instrument panel means that the function is on but that the conditions for LKA have not been met.

White symbol in the instrument panel means that the conditions for LKA have been met and that the function is available.

Orange symbol in the instrument panel means that LKA provides steering assistance back into the lane and/or gives a warning with sound or vibration in the steering wheel.

<u>_</u>! Warning

The driver is always responsible for ensuring that the vehicle is operated in a safe manner. The driver is advised to read all of the sections in the Owner's Manual about this function before using the function.

✓ Warning

- The function is supplementary driver support intended to facilitate driving and help make it safer it cannot handle all situations in all traffic, weather and road conditions.
- The driver is advised to read all sections in the Owner's Manual about this function to learn of its limitations, which the driver must be aware of before using the function.
- Driver support functions are not a substitute for the driver's attention and judgment. The driver is always responsible for ensuring the vehicle is driven in a safe manner, at the appropriate speed, with an appropriate distance to other vehicles, and in accordance with current traffic rules and regulations.

* Option/accessory.

^[1] Lane Keeping Aid(LKA)

10.1.3.10. Collision risk warning from speed-controlling functions

The driver support systems Adaptive Cruise Control* and Pilot Assist* can help alert the driver if the distance to the vehicle ahead suddenly decreases to an unsafe distance.

Collision warning audible signal and symbol

- 1 Audible signal at risk of collision
- 2 Collision warning symbol
- 3 Camera and radar unit distance monitoring

Adaptive Cruise Control and Pilot Assist use approx. 40% of the braking capacity. If a situation requires more braking force than driver support can provide, and if the driver does not apply the brakes, a warning light and audible warning signal will be activated to alert the driver that immediate action is required.

Warning

The driver support system only issues a warning for vehicles detected by its radar unit – thus, a warning may come after a delay or not at all. Never wait for a warning. Apply the brakes when necessary.

* Option/accessory.

10.1.4. Passing assistance

10.1.4.1. Passing assistance*

Passing assistance can assist the driver when passing other vehicles. The function can be used with Adaptive Cruise Control* or Pilot Assist*.

When Adaptive Cruise Control or Pilot Assist is following another vehicle and you indicate that you intend to pass that vehicle by using the turn signal^[1], the system can assist by beginning to accelerate toward the vehicle ahead **before** your vehicle has moved into the passing lane.

The function will then delay a speed reduction to avoid early braking as your vehicle approaches a slower-moving vehicle.

The function remains active until your vehicle has passed the other vehicle.

/ Warning

Please note that this function can be activated in more situations than just passing another vehicle, such as when a direction indicator is used to indicate a lane change or before exiting to another road – the vehicle will then briefly accelerate.

/ Warning

- The function is supplementary driver support intended to facilitate driving and help make it safer it cannot handle all situations in all traffic, weather and road conditions.
- The driver is advised to read all sections in the Owner's Manual about this function to learn of its limitations, which the driver must be aware of before using the function.
- Driver support functions are not a substitute for the driver's attention and judgment. The driver is always responsible for ensuring the vehicle is driven in a safe manner, at the appropriate speed, with an appropriate distance to other vehicles, and in accordance with current traffic rules and regulations.

* Option/accessory.

^[1] Only the left-hand turn signal for left-hand drive vehicles, or right-hand turn signal for right-hand drive vehicles.

10.1.4.2. Using passing assistance*

Passing assistance can be used with Adaptive Cruise Control* or Pilot Assist*. Several conditions must be met for passing assistance to be possible.

In order to activate passing assistance:

- your vehicle must be following a vehicle ahead (target vehicle)
- your vehicle's current speed must be at least 70 km/h (43 mph)
- the set speed must be high enough to safely pass another vehicle.

To start passing assistance:

- 1 Turn on the left turn signal.
- > Passing assistance begins accelerating and shortens the time interval to the vehicle ahead for a short period of time to facilitate passing. If the passing maneuver is not completed, the time interval will revert to the preset value.

✓ Warning

The driver should be aware that if conditions suddenly change when using Passing Assistance, the function may implement an undesired acceleration in certain conditions.

Some situations should be avoided, e.g. if:

- the vehicle is approaching an exit in the same direction as passing would normally occur
- the vehicle ahead slows before your vehicle has had time to switch to the passing lane
- traffic in the passing lane slows down

Situations of this type can be avoided by temporarily putting Pilot Assist in standby mode.

* Option/accessory.

10.1.5. Cruise control functions

There are several driver support systems that can assist you while driving in order to maintain a suitable speed depending on situation. Here is a summary to make them more easily distinguishable.

We recommend that you read all of the sections in the Owner's Manual that relate to a function in order to learn about factors such as its limitations and what the driver should be aware of before using the system.

	Cruise control ^[1]	Adaptive Cruise Control* [2] [3]	Pilot Assist* ^[3]
Symbol in the instrument panel	<i>(</i> 7	6	9 5
Brief description	Cruise control can help the driver maintain an even speed to provide a more relaxing driving experience on e.g. highways and long, straight roads with even traffic flows.	Adaptive Cruise Control helps the driver maintain a constant speed with a set time interval to the vehicle ahead.	Pilot Assist can help the driver keep the vehicle in the current traffic lane by providing steering assistance and maintaining an even speed and a set time interval to the vehicle ahead.

- ^[1] Cruise Control
- * Option/accessory.
- ^[2] Adaptive Cruise Control
- ^[3] Depending on market, this function can be either standard or optional.

10.1.6. Steering wheel buttons for speed-controlling functions

The speed-controlling functions can be controlled using the left-side steering wheel keypad. This applies to cruise control ($CC^{[1]}$), Adaptive Cruise Control* ($ACC^{[2]}$) and Pilot Assist*.

Buttons for speed-controlling functions

- () (S): From standby mode Activates the selected function and sets the current speed.
- (•): From active mode Puts the function in standby mode.
- 2 ブ : From standby mode Activates the selected function and resumes the stored speed. 🕂 : From active mode Increases the stored speed.
- 3 : Reduces the set speed.
- 4 < : Moves left to the next function.
- 6 ► : Moves right to the next function.
- 6 —: Reduces the time interval to the vehicle ahead.
- 7 =: Increases the time interval to the vehicle ahead.

√ Warning

- The function is supplementary driver support intended to facilitate driving and help make it safer it cannot handle all situations in all traffic, weather and road conditions.
- The driver is advised to read all sections in the Owner's Manual about this function to learn of its limitations, which the driver must be aware of before using the function.
- Driver support functions are not a substitute for the driver's attention and judgment. The driver is always responsible for ensuring the vehicle is driven in a safe manner, at the appropriate speed, with an appropriate distance to other vehicles, and in accordance with current traffic rules and regulations.
- ^[1] Cruise Control
- * Option/accessory.
- ^[2] Adaptive Cruise Control

10.1.7. Selecting and activating speed-controlling functions

The speed-controlling functions must first be selected in the center display before they can be activated using the button on the steering wheel. This applies to cruise control ($CC^{[1]}$), Adaptive Cruise Control ($ACC^{[2]}$) and

- Press the < or button on the steering wheel keypad and scroll to the symbol in the instrument panel for the desired function.
 - Cruise control:
 - \sim Adaptive Cruise Control:
 - ć\$ Pilot Assist:
- > The symbol in the instrument panel is gray the function is selected.
- When the function is selected, press (on the steering wheel keypad to activate. 2
- The symbol in the instrument panel lights up the function starts and the current speed is stored as the maximum speed.
- If the function goes into standby mode press the 5° button on the steering wheel to reactivate. 3
- The speed-controlling markings in the instrument panel illuminate and the vehicle will then return to the most recently set speed.

Requirements

Certain conditions must be met in order to start any of the functions.

Cruise control

In order to start Cruise Control from standby mode, the vehicle's current speed must be 30 km/h (20 mph) or higher.

Adaptive Cruise Control

- The driver's seat belt must be buckled and the driver's door must be closed.
- There must be a vehicle ahead (target vehicle) within a reasonable distance or your vehicle's current speed must be at least 15 km/h (9 mph).

Pilot Assist

- The driver's seat belt must be buckled and the driver's door must be closed.
- The side markings of the lane must be clearly visible and detected by the vehicle. .
- There must be a vehicle ahead (target vehicle) within a reasonable distance or your vehicle's current speed must be at least 15 km/h (9 mph).
- The speed must not exceed 140 km/h (87 mph).
- The driver must keep their hands on the steering wheel.

^[1] Cruise Control

10.1.8. Deactivating speed-controlling functions

The speed-controlling functions can be deactivated using the button on the steering wheel. The relevant function will then go into standby mode. This applies to cruise control ($CC^{[1]}$), Adaptive Cruise Control* ($ACC^{[2]}$) and Pilot Assist*.

- 1 Pressing the () button on the steering wheel keypad.
- The symbol and the markings in the instrument panel are extinguished the selected speed-controlling functions are in standby mode.

When another function is selected using the buttons on the steering wheel, the instrument panel's symbol and marking for the previously selected function are hidden, and the set/stored maximum speed is deleted.

/ Warning

When speed-controlling functions are in standby mode, the driver must intervene and regulate both speed and distance to the vehicle ahead.

- ^[1] Cruise Control
- * Option/accessory.
- ^[2] Adaptive Cruise Control

10.2. Distance Alert

10.2.1. Setting time interval to the vehicle ahead

The time interval to the vehicle ahead can be set for the functions Adaptive Cruise Control* and Pilot Assist*.

Controls for setting a time interval.

1 Reduce the time interval

- 2 Increase the time interval
- Oistance indicator

Press the (1) or (2) button to decrease or increase the time interval.

> The distance indicator (3) shows the current time interval.

Different time intervals to the vehicle ahead can be selected and are shown in the instrument panel as 1–5 horizontal bars. The more bars, the longer the time interval. One bar represents an interval of approx. 1 second to the vehicle ahead. 5 bars repre-

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note. 426 / 1010 sents approx. 3 seconds.

In order to help your vehicle follow the vehicle ahead as smoothly and comfortably as possible, Adaptive Cruise Control allows the time interval to vary noticeably in certain situations. At low speeds, when the distance to the vehicle ahead is short, Adaptive Cruise Control increases the time interval slightly.

(i) Note

When the symbol in the instrument panel shows a vehicle and a steering wheel, Pilot Assist follows a vehicle ahead at a preset time interval.

When only a steering wheel is shown, there is no vehicle ahead within a reasonable distance.

(i) Note

When the symbol in the instrument panel shows two vehicles, Adaptive Cruise Control is following the vehicle ahead at a preset time interval.

When only one vehicle is shown, there is no vehicle ahead within a reasonable distance.

(i) Note

- The greater the vehicles' speed, the greater the distance between them for a set time interval.
- Only use the time intervals permitted by local traffic regulations.
- If driver support does not seem to respond with a speed increase when activated, it may be because the time interval to the vehicle ahead is shorter than the set time interval.

/ Warning

- Only use a time interval suitable for the current traffic conditions.
- The driver should be aware that short time intervals give them limited time to react and act to any unforeseen traffic situation.

* Option/accessory.

10.2.2. Collision risk warning from speed-controlling functions

The driver support systems Adaptive Cruise Control* and Pilot Assist* can help alert the driver if the distance to the vehicle ahead suddenly decreases to an unsafe distance.

Collision warning audible signal and symbol

- 1 Audible signal at risk of collision
- 2 Collision warning symbol
- 3 Camera and radar unit distance monitoring

Adaptive Cruise Control and Pilot Assist use approx. 40% of the braking capacity. If a situation requires more braking force than driver support can provide, and if the driver does not apply the brakes, a warning light and audible warning signal will be activated to alert the driver that immediate action is required.

Warning

The driver support system only issues a warning for vehicles detected by its radar unit – thus, a warning may come after a delay or not at all. Never wait for a warning. Apply the brakes when necessary.

* Option/accessory.

10.3. Blind Spot Information

10.3.1. BLIS*

The BLIS^[1] function is designed to help provide assistance in heavy traffic with several lanes moving in the same direction by helping the driver to detect the presence of vehicles in the "blind spot" area behind and to the side of the vehicle.

Location of BLIS indicator light

BLIS is a driver support system designed to alert the driver of:

- vehicles in your "blind spot"
- vehicles approaching rapidly in adjacent lanes.

BLIS overview

- 1 Blind spot zone
- **2** Rapidly approaching vehicle zone

The system is designed to react to:

- vehicles passing your vehicle
- another vehicle is rapidly approaching your vehicle.

When BLIS detects a vehicle in zone 1 or a rapidly approaching vehicle in zone 2, an indicator light will illuminate in the right or left rearview mirror and glow steadily. If the driver then uses the turn signal on the side in which the warning has been given, the indicator light will become brighter and begin flashing.

BLIS is active when your vehicle is traveling at a speed over 12 km/h (7 mph).

If a passing vehicle's speed is more than 15 km/h (9 mph) faster than your vehicle, BLIS will not react.

(i) Note

The light illuminates on the side of the vehicle where the system has detected the vehicle. If the vehicle is passed on both sides simultaneously, both lights come on.

/ Warning

- The function is supplementary driver support intended to facilitate driving and help make it safer it cannot handle all situations in all traffic, weather and road conditions.
- The driver is advised to read all sections in the Owner's Manual about this function to learn of its limitations, which the driver must be aware of before using the function.
- Driver support functions are not a substitute for the driver's attention and judgment. The driver is always responsible for ensuring the vehicle is driven in a safe manner, at the appropriate speed, with an appropriate distance to other vehicles, and in accordance with current traffic rules and regulations.

* Option/accessory.

^[1] Blind Spot Information

10.3.2. Activating and deactivating BLIS*

The BLIS^[1] function can be activated or deactivated.

Activate or deactivate the function using this button in the center display's Function view.

- Illuminated button the function is activated.
- Extinguished button the function is deactivated.

If BLIS is activated when the engine is started, the indicator lights in the rearview mirrors will flash once.

If BLIS is deactivated when the engine is turned off, it will remain off the next time the engine is started and the indicator lights will not illuminate.

- * Option/accessory.
- ^[1] Blind Spot Information

10.3.3. BLIS* messages

A number of messages related to BLIS^[1] may be displayed in the instrument panel. Several examples are provided below.

Message	Meaning
Blind spot sensor Service required	The system is not functioning as intended. Contact a workshop ^[2] .
Blind spot system off Trailer attached	BLIS and Cross Traffic Alert* have been deactivated because a trailer has been connected to the vehicle's electrical system.

A text message can be erased by briefly pressing the O button in the center of the right-side steering wheel keypad.

If the message persists, contact a workshop. An authorized Volvo workshop is recommended.

* Option/accessory.

- ^[1] Blind Spot Information
- ^[2] An authorized Volvo workshop is recommended.

10.3.4. BLIS* limitations

BLIS^[1] functionality may be reduced in certain situations.

Keep the marked area clean (on both the left and right sides of the vehicle)^[2].

Examples of limitations:

- Dirt, ice and snow covering the sensors may reduce functionality and prevent the system from providing warnings.
- The BLIS function is automatically deactivated if a trailer, bicycle holder or similar is connected to the vehicle's electrical . system.
- For BLIS to function effectively, bicycle holders, luggage racks or similar should not be mounted on the vehicle's towbar.

/! Warning

- BLIS does not work in sharp curves.
- BLIS does not work when the vehicle is being reversed.

(i) Note

The function uses the vehicle's radar sensors, which have certain general limitations.

- * Option/accessory.
- ^[1] Blind Spot Information
- ^[2] Note: This illustration is general and details may vary depending on model.

10.4. Cross Traffic Alert

10.4.1. Cross Traffic Alert*

Cross Traffic Alert(CTA) is a supplementary driver support system to BLIS^[1] that is intended to help the driver detect vehicles crossing behind the vehicle while backing up.

The auto-brake sub-function can help the driver stop the car if there is a risk of collision with an unobserved vehicle.

Examples of areas in which Cross Traffic Alert can help the driver detect obstacles while backing up.

The function is primarily designed to detect vehicles, but in certain cases can also detect pedestrians or smaller objects such as bicycles.

The function is only active when the vehicle is moving backward or reverse gear is engaged.
If the function detects that something is approaching your vehicle from the side:

- an audible signal will sound from either the left or right speaker, depending on which side of your vehicle the object is Ð approaching from.
- an icon will illuminate in the Park Assist System graphic in the instrument panel. Ð
- an icon will appear in the Park Assist Camera's Top view.

Illuminated Cross Traffic Alert icon in the Park Assist System graphic on the screen.

If the driver does not pay attention to the warning from the function and a collision is unavoidable, the auto-brake sub-function will intervene to stop the vehicle and a message will be shown on the instrument panel to explain why the vehicle was braked.

Warning

- The function is supplementary driver support intended to facilitate driving and help make it safer it cannot handle all situations in all traffic, weather and road conditions.
- The driver is advised to read all sections in the Owner's Manual about this function to learn of its limitations, which the driver must be aware of before using the function.
- Driver support functions are not a substitute for the driver's attention and judgment. The driver is always responsible for ensuring the vehicle is driven in a safe manner, at the appropriate speed, with an appropriate distance to other vehicles, and in accordance with current traffic rules and regulations.
- * Option/accessory.
- ^[1] Blind Spot Information

10.4.2. Activating and deactivating Cross Traffic Alert*

The driver can choose to deactivate the Cross Traffic Alert (CTA) function.

Activate or deactivate the function using this button in the center display's Function view.

433 / 1010

- Illuminated button the function is activated.
- Extinguished button the function is deactivated.

The function is automatically activated each time the engine is started.

* Option/accessory.

10.4.3. Cross Traffic Alert* messages

A number of messages related to Cross Traffic Alert (CTA) may be displayed in the instrument panel. Several examples are provided below.

Message	Meaning
Blind spot sensor Service required	The system is not functioning as intended. Contact a workshop ^[1] .
Blind spot system off Trailer attached	$BLIS^{[2]}$ and CTA have been deactivated because a trailer has been connected to the vehicle's electrical system.

A text message can be erased by briefly pressing the O button in the center of the right-side steering wheel keypad.

If the message persists, contact a workshop. An authorized Volvo workshop is recommended.

- * Option/accessory.
- ^[1] An authorized Volvo workshop is recommended.
- ^[2] Blind Spot Information System

10.4.4. Cross Traffic Alert* limitations

The Cross Traffic Alert (CTA) function with the auto-brake sub-function may have limited functionality in certain situations. Auto-brake is active at speeds under 15 km/h (9.3 mph).

/ Warning

The auto-brake sub-function can only detect and apply the brakes for other moving vehicles – not for e.g. stationary obstacles, cyclists or pedestrians.

The function has certain limitations – the sensors, for example, cannot "see" through other parked vehicles or objects blocking the vehicle.

Below are a few examples of situations in which the function's field of vision may be initially limited and approaching vehicles may therefore not be detected until they are very close to your vehicle:

The vehicle is parked very far into a parking space.

In a diagonal parking space, Cross Traffic Alert may be completely "blind" on one side of your vehicle.

1 Blind zone.

2 The function's field of vision.

However, as you back your vehicle slowly out of a parking space, CTA's field of vision changes in relation to the obstructing vehicle/object and its blind zone is reduced.

Examples of further limitations

- Dirt, ice and snow covering the sensors may reduce functionality and prevent the system from providing warnings. .
- CTA is automatically deactivated if a trailer, bicycle holder or similar is connected to the vehicle's electrical system.
- . For CTA to function effectively, bicycle holders, luggage racks or similar should not be mounted on the vehicle's towbar.

(i) Note

The function uses the vehicle's radar sensors, which have certain general limitations.

* Option/accessory.

10.5. Rear Collision Warning

10.5.1. Rear Collision Warning*

The Rear Collision Warning^[1] (RCW) function can help the driver avoid rear-end collisions from vehicles approaching from behind.

The function can alert drivers of following vehicles of the risk of a collision by rapidly flashing the turn signals.

If, at a speed below 30 km/h (20 mph), the function detects that the vehicle is in danger of being hit from behind, the seat belt tensioners may tension the front seat belts. The Whiplash Protection System will also be activated in a collision.

Immediately before a collision from behind, the function may also activate the brakes in order to reduce the forward acceleration of the vehicle during the collision. However, the brakes will only be applied if your vehicle is stationary. The brakes will be immediately released if the accelerator pedal is depressed.

The function is automatically activated each time the engine is started.

/ Warning

- The function is supplementary driver support intended to facilitate driving and help make it safer it cannot handle all situations in all traffic, weather and road conditions.
- The driver is advised to read all sections in the Owner's Manual about this function to learn of its limitations, which the driver must be aware of before using the function.
- Driver support functions are not a substitute for the driver's attention and judgment. The driver is always responsible for ensuring the vehicle is driven in a safe manner, at the appropriate speed, with an appropriate distance to other vehicles, and in accordance with current traffic rules and regulations.

* Option/accessory.

^[1] This function is not available on all markets.

10.5.2. Rear Collision Warning* limitations

In some situations, it may be difficult for Rear Collision Warning (RCW)^[1] to warn the driver of a collision risk.

This may be the case if:

the vehicle approaching from the rear is detected at a late stage

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note. 436 / 1010

- the vehicle approaching from the rear changes lanes at a late stage
- a trailer, bicycle holder or similar is connected to the vehicle's electrical system the function will then be automatically deactivated.

(i) Note

In certain markets RCW does **not** warn with the direction indicators due to local traffic regulations – in such cases, that part of the function is deactivated.

(i) Note

The function uses the vehicle's radar sensors, which have certain general limitations.

* Option/accessory.

^[1] Warning of collision from the rear.

10.6. Connected Safety

10.6.1. Connected Safety

Connected Safety^[1] communicates information between your vehicle and other vehicles via the Internet^[2]. The function is designed to notify the driver of any hazardous road conditions ahead.

The function can notify the driver if another vehicle further down the road has activated its hazard warning flashers or detected slippery road conditions. You will also be notified if your own vehicle detects slippery road conditions.

Connected Safety can assist the driver with the following:

- Hazard warning flashers alert
- Slippery road alerts

Connected Safety communication between vehicles only works for vehicles that are equipped with the function and have it activated.

Hazard warning flashers alert

If your vehicle's hazard warning flashers are activated, information on this can be sent to other vehicles approaching your location.

When your vehicle approaches a vehicle with its hazard warning flashers on, this symbol will appear in the instrument panel.

Slippery road alerts

If your own car detects reduced friction between your tires and the road, information on this can be sent to vehicles approaching your own car's position.

As the vehicle approaches the area affected, this symbol will be displayed in the instrument panel to alert the driver of slippery road conditions. Drivers of other vehicles receiving information via Connected Safety will receive similar notifications as they approach the area.

Verning

- The function is supplementary driver support intended to facilitate driving and help make it safer it cannot handle all situations in all traffic, weather and road conditions.
- The driver is advised to read all sections in the Owner's Manual about this function to learn of its limitations, which the driver must be aware of before using the function.
- Driver support functions are not a substitute for the driver's attention and judgment. The driver is always responsible for ensuring the vehicle is driven in a safe manner, at the appropriate speed, with an appropriate distance to other vehicles, and in accordance with current traffic rules and regulations.

^[1] Not available in all markets.

^[2] There may be a charge for transmitting data over the Internet, depending on your service plan.

10.6.2. Activating and deactivating Connected Safety

For Connected Safety to be able to share information about road conditions with other drivers, the function must be activated. If you do not wish to share information, the function can be deactivated.

Activate or deactivate the function using this button in the center display's Function view.

- Illuminated button the function is activated.
- Extinguished button the function is deactivated.

At activation, the driver must accept the special terms and conditions shown in the display before an Internet connection^[1] can be established. The driver must, for example, accept that data is sent from the vehicle using the driver's cellular phone.

Even when your vehicle is not connected to the Internet, you will still be notified if the system in your own vehicle detects slippery road conditions. For Connected Safety to function at full capacity, your vehicle needs to be connected to the Internet.

^[1] There may be a charge for transmitting data over the Internet, depending on your service plan.

10.6.3. Connected Safety limitations

Information on vehicles with activated hazard warning flashers or which have detected slippery road conditions is not always communicated between all vehicles in the affected area.

This may be the case if:

- No or insufficient Internet connection.
- The maneuvers (steering wheel movements, acceleration or braking) made by the vehicles on slippery surfaces are too weak for friction between the tires and road to be detected.
- Vehicles that have detected slippery road conditions or activated hazard warning flashers have not activated the function.
- Vehicles that have detected slippery road conditions or activated hazard warning flashers are not equipped with the function.
- Insufficient GPS/satellite navigation may prevent warnings.
- Slippery road conditions were detected or hazard warning flashers were activated on a road that is not registered in the Volvo Cars database.
- Connected Safety is not developed on all markets and does not cover all areas. Consult a Volvo retailer for more information on covered areas.

/ Warning

- In certain situations, the function may give false warnings of slippery road conditions.
- The function cannot always detect other vehicles with activated hazard warning factors or detect all stretches of road with slippery conditions.

10.7. City Safety

10.7.1. City Safety™

City Safety^[1] can alert the driver with light, sound and pulsations in the brake pedal to help the driver detect pedestrians, cyclists, large animals and vehicles.

Function overview

- 1 Audible signal at risk of collision
- 2 Collision warning symbol
- 3 Camera/radar sensor distance monitoring

The function can help the driver avoid a collision in e.g. stop-and-go traffic, when changes in the traffic ahead and driver distraction could lead to an incident. City Safety activates a brief, forceful braking in an attempt to stop your vehicle immediately behind the vehicle or object ahead.

The function assists the driver by automatically applying the brakes if there is an imminent risk of a collision and the driver does not react in time by braking and/or steering away.

City Safety is activated in situations in which the driver should have applied the brakes much earlier, which means that the system will not be able to assist the driver in all situations. The function is designed to be activated as late as possible to help avoid unnecessary intervention. Automatic braking will only be applied after or during a collision warning.

Normally, the occupants of the vehicle will not be aware of City Safety except when the system intervenes when a collision is imminent.

✓. Warning

- The function is supplementary driver support intended to facilitate driving and help make it safer it cannot handle all situations in all traffic, weather and road conditions.
- The driver is advised to read all sections in the Owner's Manual about this function to learn of its limitations, which the driver must be aware of before using the function.
- Driver support functions are not a substitute for the driver's attention and judgment. The driver is always responsible for ensuring the vehicle is driven in a safe manner, at the appropriate speed, with an appropriate distance to other vehicles, and in accordance with current traffic rules and regulations.

^[1] This function is not available on all markets.

10.7.2. City Safety sub-functions

City Safety^[1] can help prevent a collision or lower the vehicle's speed at the point of impact. The function consists of several subfunctions.

Ability to reduce speed

If the difference in speed between your vehicle and the obstacle is greater than the speeds specified below, the City Safety autobrake function cannot prevent a collision, but it can help mitigate its effects.

Vehicles

City Safety can help prevent a collision with a vehicle ahead by reducing your vehicle's speed by up to 60 km/h (37 mph).

Cyclists

City Safety can help prevent a collision with a cyclist ahead by reducing your vehicle's speed by up to 50 km/h (30 mph).

Pedestrians

City Safety can help prevent a collision with a pedestrian ahead by reducing your vehicle's speed by up to 45 km/h (28 mph).

Large animals

If there is a risk of colliding with a large animal, City Safety can help reduce your vehicle's speed by up to 15 km/h (9 mph).

The braking function for large animals is primarily intended to mitigate the force of a collision at higher speeds. Braking is most effective at speeds above 70 km/h (43 mph) and less effective at lower speeds.

City Safety steps

City Safety carries out three steps in the following order:

- 1. Collision warning
- 2. Brake assistance
- 3. Auto-brake

1 - Collision warning

The driver is first alerted to the risk of an imminent collision.

City Safety can detect pedestrians, cyclists or vehicles that are stationary, are moving in the same direction as your vehicle and are ahead of your vehicle. City Safety can also detect pedestrians, cyclists or large animals that are crossing the road in front of your vehicle.

If there is a risk of a collision with a pedestrian, large animal, cyclist or another vehicle, the driver will be alerted with light, sound and pulsations in the brake pedal. At lower speeds, during hard braking or if the accelerator pedal is pressed, the brake pedal pulsation warning will not be given. The intensity of the brake pedal pulsations varies according to the vehicle's speed.

2 - Brake assistance

If the risk of a collision increases after the collision warning, brake support will be activated.

If the system determines that the pressure the driver is exerting on the brake pedal is insufficient to prevent the collision, brake support will increase pressure.

3 - Auto-brake

The automatic braking function is activated at the last moment.

If the driver has not taken evasive action by this stage and a collision is imminent, the automatic braking function will be triggered. This occurs whether or not the driver is pressing the brake pedal. Full braking force will be applied to reduce the speed at impact or reduced braking effect will be applied if this is sufficient to avoid the collision.

The seat belt tensioner may be activated when the automatic braking function is triggered.

In certain situations, auto-braking may begin with a limited braking force before applying full braking force.

If City Safety has prevented a collision, the vehicle will be kept at a standstill until the driver takes action. If the vehicle has slowed to avoid colliding with a slower-moving vehicle ahead, your speed will be reduced to that vehicle's speed.

Auto-braking can always be cancelled if the driver presses hard on the accelerator pedal.

When City Safety activates the brakes, the brake lights come on.

When City Safety applies the brakes, a text message will appear in the instrument panel to notify the driver that the function is/was activated.

. Warning

City Safety may not be used to change how the driver operates the vehicle. The driver must not only rely on City Safety to brake the vehicle.

^[1] This function is not available on all markets.

10.7.3. Setting a warning distance for City Safety

City Safety^[1] is always active, but the function's warning distance can be adjusted.

(i) Note

The City Safety function cannot be deactivated. It is activated automatically each time the engine/electric motor is started.

The alert distance determines the sensitivity of the system and regulates the distance at which the light, sound and brake pulsations will be activated. To select warning distance:

- 1 Select Settings \rightarrow My Car \rightarrow IntelliSafe in the center display's Top view.
- 2 Under City Safety Warning, tap Late, Normal or Early to set the desired warning distance.

If the driver feels that the Early setting is giving too many warnings or finds them irritating, the Normal or Late warning distance settings can be selected instead.

If the driver feels that the warnings are too frequent and distracting, the warning distance can be reduced. This will reduce the total number of warnings, but it will also result in City Safety providing warnings at a later stage.

The Late warning distance setting should therefore only be used in exceptional cases, such as when a more dynamic driving style is preferred.

/ Warning

- No automatic system can guarantee 100% correct function in all situations. You should therefore never test use of City Safety in the direction of people, animals or vehicles – this could lead to severe damage, serious personal injury or even death.
- City Safety warns the driver if there is a risk of collision, but the function cannot reduce the driver's reaction time.
- Even if the warning distance has been set to **Early**, warnings may be perceived as late in certain situations e.g. when there are large speed differences or if the vehicle ahead suddenly brakes heavily.
- With the warning distance set to **Early**, warnings come further in advance. This may cause the warnings to come more frequently than with warning distance **Normal**, but is recommended since it can make City Safety more effective.

^[1] This function is not available on all markets.

10.7.4. City Safety messages

A number of messages related to City Safety may be displayed in the instrument panel. Several examples are provided below.

Message	Meaning
City Safety Automatic intervention	When City Safety is braking or has activated the automatic braking function, one or more symbols may illuminate in the instrument panel and a text message may be displayed.
City Safety Reduced functionality Service required	The system is not functioning as intended. Contact a workshop ^[1] .

A text message can be erased by briefly pressing the O button in the center of the right-side steering wheel keypad.

^[1] An authorized Volvo workshop is recommended.

10.7.5. City Safety limitations

City Safety^[1] functionality may be reduced in certain situations.

Surroundings

Low objects

Hanging objects, such as flags for overhanging loads or accessories such as auxiliary lights or front protective grids that extend beyond the height of the hood, may limit City Safety functionality.

Slippery road conditions

The extended braking distance on slippery roads may reduce City Safety's capacity to help avoid a collision. In these types of situations, the Anti-lock Braking System and Electronic Stability Control (ESC^[2]) are designed for optimal braking power with maintained stability.

Backlighting

The visual warning signal in the windshield may be difficult to detect in bright sunlight, if there are reflections, or if the driver is wearing sunglasses or not looking straight ahead.

Heat

If the temperature in the passenger compartment is high due to e.g. bright sunlight, the visual warning signal in the windshield may be temporarily disabled.

Camera and radar sensor's field of vision

The camera's field of vision is limited and in certain situations, it may be unable to detect pedestrians, large animals, cyclists or vehicles, or it may detect them later than expected.

Vehicles that are dirty may be detected later than clean vehicles, and in dark conditions, motorcycles may be detected late or not at all.

If a text message displayed in the instrument panel indicates that the camera or radar sensor is obstructed, it may be difficult for City Safety to detect pedestrians, large animals, cyclists, vehicles or lane markings in front of the vehicle. City Safety functionality may therefore be reduced.

Text messages may not be displayed for all situations in which the windshield sensors are blocked. The driver must therefore always keep the windshield in front of the camera/radar sensor clean.

(!) Important

Only a workshop may perform maintenance on driver support components - an authorized Volvo workshop is recommended.

Driver intervention

Backing up

City Safety is temporarily deactivated when the vehicle is backing up.

Low speed

City Safety is not activated at very low speeds under 4 km/h (3 mph). The system will therefore not intervene in situations in which your vehicle is approaching another vehicle very slowly, such as when parking.

Active driver

Action by the driver always has priority. City Safety will therefore not react or will react at a later stage with a warning or intervention in situations in which the driver is clearly steering and operating the accelerator pedal, even if a collision is unavoidable.

An active and aware driving style may therefore delay collision warnings and intervention in order to minimize unnecessary warnings.

Important warnings

Warning

The driver support system only issues a warning for obstacles detected by its radar sensor - thus, a warning may come after a delay or not at all.

Never wait for a warning or assistance. Apply the brakes when necessary.

- Warnings and brake interventions can be triggered late or not at all if the traffic situation or external influences prevent the camera and radar unit from properly detecting pedestrians, cyclists, large animals or vehicles ahead of the vehicle.
- To be able to detect vehicles at night, its front and rear lights must work and illuminate clearly.
- The camera and radar unit have a limited range for pedestrians and cyclists the system can provide effective warnings and brake interventions if the relative speed is lower than 50 km/h (30 mph). For stationary or slow-moving vehicles, warnings and brake interventions are effective at vehicle speeds of up to 70 km/h (43 mph). Speed reduction for large animals is less than 15 km/h (9 mph) and can be achieved at vehicle speeds over 70 km/h (43 mph). At lower speeds, the warning and brake intervention for large animals is less effective.
- Warnings for stationary or slow-moving vehicles and large animals can be disengaged due to darkness or poor visibility.
- Warnings and brake interventions for pedestrians and cyclists are disengaged at vehicle speeds over 80 km/h (50 mph).
- Do not place, affix or mount anything on the inside or outside of the windshield, or in front of or around the camera and radar unit this could disrupt camera-based functions.
- Objects, snow, ice or dirt in the area of the camera sensor can reduce the function, disengage it completely or give an improper function response.

/ Warning

- The City Safety auto-brake function can prevent a collision or reduce collision speed, but to ensure full brake performance the driver should always depress the brake pedal even when the car auto-brakes.
- The warning is only activated if there is a high risk of collision you must therefore never wait for a collision warning.
- Warnings and brake interventions for pedestrians and cyclists are disengaged at vehicle speeds over 80 km/h (50 mph).
- City Safety does not activate auto-braking intervention during heavy acceleration.

i Note

The function uses the vehicle's camera and radar sensor, which has certain general limitations.

Market limitations

City Safety is not available in all countries. If City Safety is not shown in the center display's **Settings** menu, your vehicle is not equipped with this function.

In the center display's Top view, tap:

Settings → My Car → IntelliSafe

^[1] This function is not available on all markets.

^[2] Electronic Stability Control

10.7.6. City Safety braking for oncoming vehicles

City Safety can help you apply the brakes for an oncoming vehicle in your lane.

If an oncoming vehicle veers into your lane and a collision is unavoidable, City Safety can help reduce your vehicle's speed to attempt to mitigate the force of the collision.

	2
	• · · · · ·
0	

 Own vehicle 2 Oncoming vehicles

The following criteria must be met for the function to work:

- your vehicle's speed must be above 4 km/h (3 mph)
- the road must be straight Ð
- your lane must have clear side lane markings
- your vehicle must be positioned straight in your lane
- the oncoming vehicle must be positioned within your vehicle's lane markings
- the oncoming vehicle's headlights must be on .
- the function can only handle "front-to-front" collisions
- the function can only detect vehicles with four wheels.

Warning

Warnings and brake interventions due to an imminent collision with an oncoming vehicle always come very late.

10.7.7. City Safety in crossing traffic

City Safety^[1] can assist the driver when turning into the path of an oncoming vehicle in an intersection.

1 Sector in which City Safety can detect an oncoming vehicle in crossing traffic.

In order for City Safety to detect an oncoming vehicle in situations where there is a risk of a collision, that vehicle must be within the sector in which City Safety can analyze the situation.

The following conditions must also be met:

- your vehicle's speed must be at least 4 km/h (3 mph).
- your vehicle must be making a left turn.
- the oncoming vehicle's headlights must be on.

^[1] This function is not available on all markets.

10.7.8. Limitations of City Safety in crossing traffic

In certain situations, it may be difficult for City Safety to help the driver avoid a collision with crossing traffic.

For example:

- If the road is slippery and Electronic Stability Control^[1] is intervening.
- If an approaching vehicle is detected at a late stage.
- If the oncoming vehicle is partially obstructed by another vehicle or object.
- If the oncoming vehicle's headlights are off.
- If the oncoming vehicle is moving erratically and e.g. suddenly changes lanes at a late stage.

(i) Note

The function uses the vehicle's camera and radar sensor, which has certain general limitations.

^[1] Electronic Stability Control (ESC)

10.7.9. Automatic braking during delayed evasive maneuvers with City Safety

City Safety^[1] can assist the driver by automatically braking the vehicle when it is not possible to avoid a collision by steering alone.

City Safety assists the driver by periodically attempting to predict possible "escape routes" to the sides of the vehicle in the event a slow-moving or stationary vehicle were to be detected at a late stage.

Your vehicle (1) cannot detect any potential escape routes for veering away from the vehicle ahead (2) and may therefore apply the brakes at an earlier stage.

Own vehicle
 Slow-moving/stationary vehicles

City Safety will not intervene to automatically apply the brakes if it is possible for the driver to avoid a collision by steering the vehicle.

However, if City Safety determines that an evasive maneuver would not be possible due to traffic in the adjacent lane(s), the function can assist the driver by automatically starting to apply the brakes at an earlier stage.

^[1] This function is not available on all markets.

10.7.10. Detecting obstacles with City Safety

City Safety^[1] can help the driver detect other vehicles, cyclists, large animals and pedestrians.

Vehicles

City Safety can detect most vehicles that are stationary or are moving in the same direction as your vehicle. In some cases, it can also detect oncoming vehicles and crossing traffic.

For City Safety to be able to detect a vehicle in the dark, its headlights and taillights must be on and clearly visible.

Cyclists

Examples of what City Safety would interpret to be a cyclist: clear body and bicycle shapes.

For good performance, the system's function for cyclist detection needs the clearest possible information about the contours of the bicycle and of the cyclist's head, arm, shoulders, legs, torso and lower body in combination with normal human movements.

If large portions of the cyclist's body or the bicycle itself are not visible to the function's camera, it will not be able to detect a cyclist.

The system can only detect adult cyclists riding on bicycles intended for adults.

/ Warning

City Safety is supplementary driver support, but it cannot detect all cyclists in all situations and, for example, cannot see:

- partially obscured cyclists.
- cyclists if the contrast to the cyclist's background is poor.
- cyclists in clothing that hides their body contour.
- bikes loaded with large objects.

Warnings and brake interventions may occur late or not at all. The driver is always responsible for ensuring that the vehicle is driven correctly and with a safety distance suitable for the speed.

Pedestrians

Examples of what the system considers to be a pedestrian: clear body contours.

For good performance, the system's function for pedestrian detection needs the clearest possible information about the contours of the pedestrian's head, arm, shoulders, legs, torso and lower body in combination with normal human movements.

In order to detect a pedestrian, there must be a contrast to the background, which could depend on clothing, weather conditions, etc. If there is little contrast, the person may be detected late or not at all, which may result in a delayed reaction from the system or no reaction at all.

City Safety can detect pedestrians even in dark conditions if they are illuminated by the vehicle's headlights.

/ Warning

City Safety is supplementary driver support, but it cannot detect all pedestrians in all situations and, for example, cannot see:

- partially obscured pedestrians, people in clothing that hides their body contour or pedestrians shorter than 80 cm (32 in.).
- pedestrians if the contrast to the pedestrian's background is poor.
- pedestrians who are carrying large objects.

Warnings and brake interventions may occur late or not at all. The driver is always responsible for ensuring that the vehicle is driven correctly and with a safety distance suitable for the speed.

Large animals

Examples of what City Safety would interpret as a large animal: stationary or moving slowly and with clear body contours.

For good performance, the system's function for detecting large animals (e.g. moose, horses, etc.) needs the clearest possible information about body contours. This entails being able to detect the animal straight from the side in combination with normal movements for that animal.

If parts of the animal's body are not visible to the function's camera, the system will not be able to detect the animal.

City Safety can detect large animals even in dark conditions if they are illuminated by the vehicle's headlights.

/ Warning

City Safety is supplementary driver support, but it cannot detect all large animals in all situations and, for example, cannot see:

- partially obscured larger animals.
- larger animals seen from the front or from behind.
- running or fast moving larger animals.
- larger animals if the contrast to the animal's background is poor.
- smaller animals such as cats and dogs.

Warnings and brake interventions may occur late or not at all. The driver is always responsible for ensuring that the vehicle is driven correctly and with a safety distance suitable for the speed.

^[1] This function is not available on all markets.

10.8. Steering assistance during collision risks

10.8.1. Steering assistance at risk of collision

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note. 453 / 1010 The **Collision avoidance** function can help the driver reduce the risk of the vehicle leaving its lane unintentionally and/or colliding with another vehicle or obstacle by actively steering the vehicle back into its lane and/or swerving.

The function consists of these subfunctions:

- Run-Off Mitigation with steering assistance
- Steering assistance during collision risks from oncoming traffic
- Steering assistance during collision risks from behind*

After the system has automatically intervened, this text message will appear in the instrument panel:

Collision avoidance - Automatic intervention

/ Warning

- The function is supplementary driver support intended to facilitate driving and help make it safer it cannot handle all situations in all traffic, weather and road conditions.
- The driver is advised to read all sections in the Owner's Manual about this function to learn of its limitations, which the driver must be aware of before using the function.
- Driver support functions are not a substitute for the driver's attention and judgment. The driver is always responsible for ensuring the vehicle is driven in a safe manner, at the appropriate speed, with an appropriate distance to other vehicles, and in accordance with current traffic rules and regulations.

(i) Note

It is always the driver who must decide how much the vehicle should be in control – the vehicle can never take command.

* Option/accessory.

10.8.2. Activating or deactivating steering assistance during collision risks

The steering assistance function is optional – the driver can choose to have it activated or deactivated.

Activate or deactivate the function using this button in the center display's Function view.

- Illuminated button indicator light the function is activated.
- Extinguished button indicator light the function is deactivated.

(i) Note

When the Collision avoidance function is deactivated, all subfunctions of the following are deactivated:

- Steering assistance at risk of run-off
- Steering assistance at risk of head-on collision
- Steering assistance during collision risks from behind*

Although it is possible to deactivate the function, the driver is advised to keep it activated since it can help improve driving safety in most cases.

^[1] On some markets, the setting that was active when the engine was switched off is reactivated.

* Option/accessory.

10.8.3. Symbols and messages for steering assistance during collision risks

A number of symbols and messages related to steering assistance may be displayed in the instrument panel. Several examples are provided below.

Symbol	Message	Meaning
• <u></u> ▲	Collision avoidance Automatic intervention	When the function is activated, a message will appear to alert the driver.
(]]Ì	Windscreen sensor Sensor blocked, see Owner's manual	The camera's ability to detect the lane in front of the vehicle is reduced.

A text message can be erased by briefly pressing the O button in the center of the right-side steering wheel keypad.

If the message persists: Contact a workshop – an authorized Volvo workshop is recommended.

10.8.4. Steering assistance during collision risks limitations

The function may have limited functionality in certain situations and not intervene, e.g.:

- for smaller vehicles such as motorcycles
- if more than half of your vehicle has moved into the adjacent lane
- on roads/lanes with indistinct or no side lane markings
- outside the speed range 60-140 km/h (37-87 mph)

• when speed-dependent power steering wheel resistance is working at reduced power – e.g. during cooling due to overheating.

Functionality may also be reduced in other situations, such as:

- road work
- winter driving conditions
- narrow roads
- poor road surfaces
- a very sporty driving style
- bad weather with reduced visibility.

In these demanding driving conditions, the function may not be able to properly assist the driver. In these situations, it is recommended that it is turned off.

√ Warning

Warnings and steering assistance due to an imminent collision with an oncoming vehicle always come very late.

(i) Note

The function uses the vehicle's camera and radar sensor, which has certain general limitations.

10.8.5. Run-Off Mitigation with steering assistance

Steering assistance has several sub-functions. Run-Off Mitigation with steering assistance can help the driver and reduce the risk of the vehicle inadvertently running off the road by actively steering the vehicle back onto the road.

This function has two activation levels for intervention:

- Steering assistance only
- Steering assistance with braking

Intervention with steering assistance

Steering assistance with braking

Intervention with steering assistance and braking

Braking intervention assists in situations where steering assistance alone is not sufficient. Braking force is automatically adapted according to the situation at the moment the vehicle begins to run off the road.

The function is active at speeds between 65-140 km/h (40-87 mph) on roads with clearly visible traffic lane markings/lines.

The system uses a camera to monitor the edges of the road and the painted side marker lines. If the vehicle is about to cross the edge of the road, the function will attempt to steer the vehicle back onto the road. If this is not sufficient to keep the vehicle on the road, the brakes will also be applied.

However, the function will **not** provide either steering assistance or braking if the turn signal is used. The function will also not be activated if it detects that the driver is actively operating the vehicle.

When the function is intervening, a message is displayed in the instrument panel.

10.8.6. Steering assistance during collision risks from oncoming traffic

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note.

457 / 1010

Steering assistance has several sub-functions. Steering assistance during collision risks from oncoming traffic can help a distracted driver who has not noticed that the vehicle is veering out of the lane.

The function provides assistance by swerving your vehicle back into your own lane.

- 1 Oncoming vehicles
- 2 Own vehicle

When steering assistance is activated, collision warning for driver support will also be activated. However, the brake pedal pulsations that are part of collision warning will not be activated.

The function is active at speeds between 60-140 km/h (37-87 mph) on roads with clearly visible traffic lane markings/lines.

If your vehicle is starting to veer from your own lane and a vehicle is approaching from the opposite direction, this function can help the driver steer the vehicle back into its own lane.

However, the function will **not** provide steering assistance if the turn signal is used. The function will also not be activated if it detects that the driver is actively operating the vehicle.

When the function is intervening, a symbol and a message will appear in the instrument panel and an audible signal will sound.

10.8.7. Steering assistance during collision risks from behind*

Steering assistance has several sub-functions. If you become distracted and do not notice your vehicle starting to veer out of the lane while another vehicle is approaching from behind or is in your vehicle's blind spot, Steering assistance during collision risks from behind can help provide assistance.

The function provides assistance by steering your vehicle back into your own lane.

1 Another vehicle in blind spot zone

2 Own vehicle

If your vehicle is beginning to veer out of your lane while another vehicle is in your blind spot or another vehicle is rapidly approaching in the next lane, this function can help the driver steer the vehicle back into its own lane.

Even if the driver intentionally changes lanes using a turn signal without noticing another vehicle approaching, the function can provide assistance.

The function is active at speeds between 60-140 km/h (37-87 mph) on roads with clearly visible traffic lane markings/lines.

The lights in the door mirrors will flash while steering assistance is being provided, whether or not the BLIS * ^[1] function is activated. An audible signal will also sound.

When the function is intervening, a message is displayed in the instrument panel.

* Option/accessory.

^[1] Blind Spot Information

10.9. Driver Alert Control

10.9.1. Driver Alert Control

The Driver Alert Control (DAC) function is designed to help alert the driver to erratic behavior, e.g. if the driver is distracted or showing signs of fatigue.

The objective of the function is to detect slowly deteriorating driving behavior and is primarily intended to be used on major roads. The function is not intended for use in city traffic.

DAC is activated when the vehicle's speed exceeds 65 km/h (40 mph) and remains active as long as speeds are above 60 km/h (37 mph).

Driver Alert Control detects the vehicle's position in the traffic lane.

A camera monitors the traffic lane's marker lines and compares the direction of the road with the driver's movements of the steering wheel.

The vehicle is moving erratically in the lane.

If driving behavior becomes considerably erratic, the driver will be alerted by this symbol in the instrument panel, an audible signal and the message **Time for a break**.

If the vehicle is equipped with Sensus Navigation^{*} and the **Rest Stop Guidance** function is activated, suggestions will also be provided for suitable places to take a break.

The warning will be repeated after a short time if driving behavior does not improve.

🕂 Warning

Driver Alert Control must not be used to extend a period of driving. The driver should plan in breaks at regular intervals and make sure they are well rested.

/I Warning

An alarm from Driver Alert Control should be taken very seriously since a sleepy driver is often not aware of their own condition.

If the alarm sounds or you feel fatigued:

Stop the vehicle safely as soon as possible and rest.

Studies have shown that it is just as dangerous to drive while tired as it is to drive under the influence of alcohol or other stimulants.

Warning

- The function is supplementary driver support intended to facilitate driving and help make it safer it cannot handle all situations in all traffic, weather and road conditions.
- The driver is advised to read all sections in the Owner's Manual about this function to learn of its limitations, which the driver must be aware of before using the function.
- Driver support functions are not a substitute for the driver's attention and judgment. The driver is always responsible for ensuring the vehicle is driven in a safe manner, at the appropriate speed, with an appropriate distance to other vehicles, and in accordance with current traffic rules and regulations.

* Option/accessory.

10.9.2. Activating and deactivating Driver Alert Control

The Driver Alert Control (DAC) function can be activated or deactivated.

- Tap Settings in the center display's Top view. 1
- Select My Car
 → IntelliSafe
 → Driver Alert. 2
- Select/deselect Alertness Warning to activate/deactivate the function. 3

10.9.3. Selecting guidance to a rest area if the Driver Alert Control warning has been given

In vehicles equipped with Sensus Navigation*, the driver can activate a guide that can automatically suggest a suitable rest stop if the Driver Alert Control (DAC) warning is given.

461 / 1010

The Rest Stop Guidance function can be switched on or off.

- 1 Tap Settings in the center display's Top view.
- 2 Select My Car
 → IntelliSafe
 → Driver Alert.
- 3 Select/deselect Rest Stop Guidance to activate/deactivate the function.

* Option/accessory.

10.9.4. Driver Alert Control limitations

Driver Alert Control (DAC) functionality may be reduced in certain situations.

In certain situations, the system may provide a warning even if it has not detected a change in driving behavior, e.g.:

- in strong crosswinds
- on grooved road surfaces.

/! Warning

In certain cases, driving behavior might not be affected despite the driver's fatigue – when using the Pilot Assist* function – resulting in the driver not getting a warning from Driver Alert.

It is therefore very important to always stop and take a break at the slightest sign of fatigue, regardless of whether the function has issued a warning or not.

(i) Note

The function uses the vehicle's camera and radar sensor, which has certain general limitations.

* Option/accessory.

10.10. Lane Keeping Aid

10.10.1. Lane Keeping Aid

Lane Keeping Aid (LKA^[1]) is designed to actively steer the vehicle on freeways, highways and other major roads to help the driver reduce the risk of the vehicle unintentionally veering out of the lane.

Lake Keeping Aid steers the vehicle back into the lane and/or alerts the driver using vibrations in the steering wheel.

Lane Keeping Aid is active at speeds between 65-200 km/h (40-125 mph) on roads with clearly visible traffic lane marker lines.

On narrow roads, the function may be unavailable and go into standby mode. The function will become available again when the road becomes sufficiently wide.

A camera monitors the road/traffic lane's marker lines.

Lane Keeping Aid steers the vehicle back into its lane.

Lane Keeping Aid alerts the driver using vibrations in the steering wheel.

Depending on the settings used, Lane Keeping Aid functions in different ways:

- Assist enabled: When the vehicle approaches a lane marker line, the function will actively steer the vehicle back into the lane using light pressure on the steering wheel.
- Warning enabled: If the vehicle is about to move over a lane marker line, the driver will be alerted by vibrations in the steering wheel.
- There is also an option for activating steering assistance and alerts at the same time.

(i) Note

When the direction indicators/turn signals are activated, the Lane Keeping Aid does not provide any warning or intervene with steering.

/ Warning

- The function is supplementary driver support intended to facilitate driving and help make it safer it cannot handle all situations in all traffic, weather and road conditions.
- The driver is advised to read all sections in the Owner's Manual about this function to learn of its limitations, which the driver must be aware of before using the function.
- Driver support functions are not a substitute for the driver's attention and judgment. The driver is always responsible for ensuring the vehicle is driven in a safe manner, at the appropriate speed, with an appropriate distance to other vehicles, and in accordance with current traffic rules and regulations.

Lane Keeping Aid does not intervene

Lane Keeping Aid does not intervene in sharp inside curves.

In certain cases, such as when a turn signal is used or when "straightening out" an inside curve, Lane Keeping Aid will not provide steering assistance or alerts.

Hands on the steering wheel

Steering assistance with Lane Keeping Aid only functions if the driver's hands are on the steering wheel, which the system continuously monitors.

If the driver's hands are not on the steering wheel, an audible signal will be given and a message will instruct the driver to actively steer the vehicle:

Lane Keeping Aid - Apply steering

If the driver does not begin to steer the vehicle, the function will go into standby mode and this message will be displayed:

Lane Keeping Aid - Standby until steering applied

The function will then be unavailable until the driver begins actively steering the vehicle again.

^[1] Lane Keeping Aid

10.10.2. Activating and deactivating Lane Keeping Aid

The Lane Keeping Aid (LKA^[1]) function is optional – the driver can choose to have the function activated or deactivated.

Activate or deactivate the function using this button in the center display's Function view.

465 / 1010

- Illuminated button the function is activated.
- Extinguished button the function is deactivated.

^[1] Lane Keeping Aid

10.10.3. Differences between Pilot Assist* and Lane Keeping Aid

Pilot Assist is a comfort function that can help keep the vehicle in its own lane and maintain the distance to the vehicle in front of you. Lane Keeping Aid^[1] is a function that similarly helps in certain situations to reduce the risk of the vehicle unintentionally veering out of its lane.

Pilot Assist

Pilot Assist can help you to steer your vehicle between the lane markings, as well as maintain a preset speed and distance to the vehicle ahead. The function can also use the lane marking lines to help the driver maintain a favorable position in the lane.

What does Pilot Assist do?

- Can help to keep the vehicle within its lane by assisting steering in some cases.
- Can help to maintain a preset speed or the distance to the vehicle ahead by means of acceleration and braking operations.

How do I know that Pilot Assist is on?

Symbols in the vehicle's instrument panel let you know when the function is on.

When the steering wheel in the middle is not illuminated, Pilot Assist is on but steering assistance is not active.

When the steering wheel is illuminated, Pilot Assist is on and steering assistance is active.

2 When the steering wheel symbol in the instrument panel is illuminated, Pilot Assist is helping you to steer.

Lane Keeping Aid

Lane Keeping Aid can provide steering assistance and/or a warning to the driver when the vehicle is about to leave its lane unintentionally. The function is active between 65-180 km/h (40-112 mph) on roads with clearly visible side markings.

What does Lane Keeping Aid do?

Lane Keeping Aid can provide the driver with steering assistance, steering the vehicle back into its lane and/or providing в warnings using acoustic signals or steering wheel vibration.

How do I know that Lane Keeping Aid is on?

Symbols in the vehicle's instrument panel show the function status.

An extinguished symbol in the instrument panel means that the function is on but that the conditions for LKA have not been met.

White symbol in the instrument panel means that the conditions for LKA have been met and that the function is available.

Orange symbol in the instrument panel means that LKA provides steering assistance back into the lane and/or gives a warning with sound or vibration in the steering wheel.

Warning

The driver is always responsible for ensuring that the vehicle is operated in a safe manner. The driver is advised to read all of the sections in the Owner's Manual about this function before using the function.

Warning

- The function is supplementary driver support intended to facilitate driving and help make it safer it cannot handle all situations in all traffic, weather and road conditions.
- The driver is advised to read all sections in the Owner's Manual about this function to learn of its limitations, which the driver must be aware of before using the function.
- Driver support functions are not a substitute for the driver's attention and judgment. The driver is always responsible for ensuring the vehicle is driven in a safe manner, at the appropriate speed, with an appropriate distance to other vehicles, and in accordance with current traffic rules and regulations.

* Option/accessory.

^[1] Lane Keeping Aid(LKA)

10.10.4. Selecting type of assistance for Lane Keeping Aid

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note.

The driver can determine what types of assistance Lane Keeping Aid (LKA^[1]) should provide if the vehicle veers from its lane.

- 1 Select Settings \rightarrow My Car \rightarrow IntelliSafe in the center display's Top view.
- 2 Under Lane Keeping Aid Mode, select what assistance the function should provide:
 - Assist the driver will receive steering assistance but no warning.
 - Warning the driver is only warned through vibrations in the steering wheel.
 - Both the driver receives steering assistance and a warning through vibrations in the steering wheel.

^[1] Lane Keeping Aid

10.10.5. Lane Keeping Aid symbols and messages

A number of symbols and messages related to Lane Keeping Aid (LKA^[1]) may be displayed in the instrument panel. Several examples are provided below.

Symbol	Message	Meaning
Î	Driver support system Reduced functionality Service required	The system is not functioning as intended. Contact a workshop ^[2] .
<u>[]i</u>	Windscreen sensor Sensor blocked, see Owner's manual	The camera's ability to detect the lane in front of the vehicle is reduced.
	Lane Keeping Aid Apply steering	LKA's steering assistance is disabled when the driver's hands are not on the wheel. Follow the instructions and steer the vehicle.
	Lane Keeping Aid Standby until steering applied	LKA will go into standby mode until the driver begins steering the vehicle again.

A text message can be erased by briefly pressing the O button in the center of the right-side steering wheel keypad.

If the message persists, contact a workshop. An authorized Volvo workshop is recommended.

^[1] Lane Keeping Aid

^[2] An authorized Volvo workshop is recommended.

10.10.6. Lane Keeping Aid display

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note. 468 / 1010
Lane Keeping Aid (LKA^[1]) uses symbols in the instrument panel for various situations.

Some examples of symbols and descriptions of the situations in which they might appear are provided below.

Available

Available - the marker lines in the symbol are white.

Lane Keeping Aid is able to detect one or both of the traffic lane's side marker lines.

Unavailable

Unavailable – the marker lines in the symbol are extinguished.

Lane Keeping Aid is unable to detect the lane marker lines, the vehicle's speed is too low or the road is too narrow.

Steering/warning indicator

Steering/warning – the marker lines in the symbol are colored.

Indicates that the Lane Keeping Aid system is alerting the driver and/or attempting to steer the vehicle back into the lane.

^[1] Lane Keeping Aid

10.10.7. Lane Keeping Aid limitations

In certain demanding driving conditions, Lane Keeping Aid (LKA^[1]) may not be able to properly assist the driver. In these situations, it is recommended that the function be deactivated.

Examples of such situations include:

- road work
- winter driving conditions
- poor road surfaces
- a very sporty driving style
- bad weather with reduced visibility
- roads with indistinct or no lane markings
- sharp edges or lines other than the lane's side markings
- when speed-dependent power steering wheel resistance is working at reduced power e.g. during cooling due to overheating.

The function cannot detect barriers, railings or similar obstacles at the side of the lane.

(i) Note

The function uses the vehicle's camera and radar sensor, which has certain general limitations.

^[1] Lane Keeping Aid

10.11. Electronic Stability Control

10.11.1. Electronic Stability Control

The Electronic Stability Control (ESC^[1]) function helps the driver avoid skidding and improves the vehicle's directional stability.

This symbol will be displayed in the instrument panel when the system is intervening.

When the system has intervened to apply the brakes, a pulsing sound may be heard and the vehicle may accelerate more slowly than expected when the accelerator pedal is depressed.

The system consists of the following sub-functions:

- Stability control^[2]
- Spin control and active yaw control
- Engine drag control
- Trailer Stability Assist
- Roll Stability Control

✓ Warning

- The function is supplementary driver support intended to facilitate driving and help make it safer it cannot handle all situations in all traffic, weather and road conditions.
- The driver is advised to read all sections in the Owner's Manual about this function to learn of its limitations, which the driver must be aware of before using the function.
- Driver support functions are not a substitute for the driver's attention and judgment. The driver is always responsible for ensuring the vehicle is driven in a safe manner, at the appropriate speed, with an appropriate distance to other vehicles, and in accordance with current traffic rules and regulations.

Stability control^[2]

This function helps control the driving and braking force of each individual wheel in an attempt to stabilize the vehicle.

Spin control and active yaw control

This function is active at low speeds and brakes the wheels that are spinning to transfer additional power to wheels that are not spinning.

This function can also help prevent the wheels from spinning while the vehicle is accelerating.

Engine drag control

Engine drag control (EDC^[3]) can help prevent involuntary wheel locking, such as after engine braking on slippery roads. Inadvertent wheel lock while driving could impair the driver's ability to steer the vehicle.

Trailer Stability Assist*^[4]

Trailer Stability Assist (TSA^[5]) is designed to help stabilize a vehicle that is towing a trailer if the vehicle and trailer have begun to sway.

(i) Note

Trailer Stability Assist is deactivated if **ESC Sport Mode** is activated.

Roll Stability Control

This function helps reduce the risk of a rollover in the event of e.g. a sudden evasive maneuver or if the vehicle begins to skid. The system monitors the lateral angle at which the vehicle is leaning and registers any changes. Using this information, the system calculates the likelihood of a rollover. If there is an imminent risk of a rollover, Electronic Stability Control is activated, engine torque is reduced and brakes are applied to one or more of the wheels until the vehicle has regained stability.

/ Warning

The vehicle's stability systems help improve vehicle safety but do not replace the driver's responsibility for operating the vehicle in a safe manner. Speed and driving style should always be adapted to the current road, traffic and weather conditions. Posted speed limits should always be respected.

- ^[1] Electronic Stability Control
- ^[2] Also called traction control.
- ^[3] Engine Drag Control
- * Option/accessory.
- ^[4] Trailer Stability Assist is included if the vehicle is equipped with a Volvo original towbar.
- ^[5] Trailer Stability Assist

10.11.2. Electronic Stability Control symbols and messages

A number of symbols and messages related to Electronic Stability Control (ESC^[1]) may be displayed in the instrument panel. Several examples are provided below.

Symbol	Message	Meaning
	Steady glow for approx. 2 seconds	System check when the engine is started.
	Flashing light	The system is actively operating.
CFF	Steady glow	Sport mode is activated. NOTE! The system is not deactivated in this mode, but has partially reduced functionality.
-	Traction control Temporarily off	The system's functionality has been temporarily reduced due to high brake system temperatures. The function will be auto- matically reactivated when the brakes have cooled.
	ESC Service required	The system is not functioning properly. Stop the vehicle in a safe place, turn off the engine and then restart it.

A text message can be erased by briefly pressing the O button in the center of the right-side steering wheel keypad.

If the message persists, contact a workshop. An authorized Volvo workshop is recommended.

^[1] Electronic Stability Control

10.11.3. Electronic Stability Control in sport mode

The stability system (ESC^[1]) is always activated and cannot be switched off. However, the driver can select ECS sport mode, which offers more active driving characteristics.

With sport mode selected, intervention from the system is reduced and more lateral movement is permitted, giving the driver more control of the vehicle than usual.

When sport mode is selected, the function may seem to be disabled even though it continues to assist the driver.

With Sport mode activated, the trailer stabilizer function TSA^[2] is switched off.

Sport mode also helps provide more traction, even if the vehicle gets stuck or is driving on a loose surface such as deep snow or loose sand.

^[1] Electronic Stability Control

^[2] Trailer Stability Assist

(i) Note

10.11.4. Activating and deactivating Sport mode for **Electronic Stability Control**

The stability system (ESC^[1]) is always activated and cannot be switched off. However, the driver can select Sport mode, which offers more active driving characteristics.

When ESC Sport Mode is activated, this symbol will illuminate with a steady glow in the instrument panel. It will remain on until the driver deactivates the function or until the engine is turned off. The system will return to normal mode the next time the engine is started.

Activate or deactivate the function using this button in the center display's Function view.

Illuminated button - the function is activated.

• Extinguished button – the function is deactivated.

The sport mode function cannot be selected when any of the following functions are activated:

- Cruise control
- Adaptive Cruise Control*
- Pilot Assist*
- ^[1] Electronic Stability Control
- * Option/accessory.

10.12. Road Sign Information

10.12.1. Road Sign Information*

The Road Sign Information function can help the driver observe speed-related road signs.

Examples of signs that can be detected^[1].

If the vehicle passes a speed limit sign, it will be displayed in the instrument panel.

There are also subfunctions for Road Sign Information that can alert the driver if the speed limit has been exceeded or if there are speed cameras nearby.

In certain markets, the Road Sign Information function is only available in combination with map data.

/ Warning

- The function is supplementary driver support intended to facilitate driving and help make it safer it cannot handle all situations in all traffic, weather and road conditions.
- The driver is advised to read all sections in the Owner's Manual about this function to learn of its limitations, which the driver must be aware of before using the function.
- Driver support functions are not a substitute for the driver's attention and judgment. The driver is always responsible for ensuring the vehicle is driven in a safe manner, at the appropriate speed, with an appropriate distance to other vehicles, and in accordance with current traffic rules and regulations.

* Option/accessory.

^[1] Road signs differ according to market – the illustrations shown here are just some examples.

10.12.2. Road Sign Information and Sensus Navigation*

The Road Sign Information function can obtain speed-related information from Sensus Navigation.

If the vehicle is equipped with Sensus Navigation*, speed-related information will be provided in the following situations:

- In cases where the speed limit is given indirectly, e.g. signs for highways or other major roads.
- If a previously detected speed sign is deemed to be no longer valid and no new sign has been passed.

(i) Note

In certain markets, the Road Sign Information* function is only available in combination with Sensus Navigation*.

(i) Note

If a downloaded third-party app is used for navigation, there is no support for speed-related information.

* Option/accessory.

10.12.3. Activating and deactivating Road Sign Information*

The Road Sign Information (RSI^[1]) function is optional – the driver can choose to have the function activated or deactivated.

Activate or deactivate the function using this button in the center display's Function view.

- Illuminated button the function is activated.
- Extinguished button the function is deactivated.
- * Option/accessory.
- ^[1] Road Sign Information

10.12.4. Road Sign Information* limitations

Road Sign Information functionality may be reduced in certain situations.

The function could have reduced functionality due to e.g.:

- faded road signs
- signs located in a curve in the road
- twisted or damaged signs
- signs positioned high above the road
- fully/partially obstructed or poorly positioned signs
- signs partially or fully covered by frost, snow and/or dirt
- digital map data^[1] with outdated, incorrect or missing speed information^[2]

(i) Note

In certain markets, the Road Sign Information function is only available in combination with map data.

(i) Note

Certain types of bike carriers that are connected to the trailer socket may be interpreted as a connected trailer by the road sign information function. In such cases, the instrument panel may indicate incorrect speed information.

(i) Note

The function uses the vehicle's camera and radar sensor, which has certain general limitations.

- ^[1] Vehicles equipped with Sensus Navigation*.
- ^[2] Map data and speed information is not available for all areas.

10.12.5. Speed limit and speed camera warnings from Road Sign Information*

There are subfunctions for Road Sign Information that can alert the driver if the speed limit has been exceeded or if there are speed cameras nearby.

Speed limit warning

The ^[1] symbol in the instrument panel will flash when the maximum speed is exceeded. The maximum speed is determined by the current speed limit plus any additional margin, which can be selected in the center display under settings.

Speed Warning alerts the driver if the vehicle's speed has exceeded the current speed limit or stored Speed Limiter speed. The warning will be repeated once after about 30 seconds in that speed limit area if the driver does not slow down. An additional warning will not be provided unless the vehicle's speed is reduced by at least 5 km/h (3 mph) under the speed limit and then exceeds it again or the vehicle enters a new area with a speed limit.

(i) Note

For an audible alert to be provided if the speed is exceeded, the **Speed Limit Warning** function must be activated and the **Road Sign Audio Warning** sub-function must be **On**. Audible alerts are provided if the vehicle's speed exceeds the speed displayed by Road Sign Information in the instrument panel.

Speed camera warning

Vehicles equipped with Road Sign Information and map data^[2] can provide information on upcoming speed cameras in the instrument panel^[3].

If the vehicle exceeds a detected speed limit with the Speed Warning function activated, the driver is given a speed warning when the vehicle is approaching a speed camera if the navigation map for the vehicle's current location contains information on speed cameras.

It is possible to receive an audible alert for speed cameras regardless of the vehicle's speed and whether or not the speed limit is exceeded, even if the **Road Sign Audio Warning** function is deactivated.

- * Option/accessory.
- ^[1] Road signs differ by market the illustration shown here is just an example.
- ^[2] Sensus Navigation
- ^[3] Information on speed cameras on the navigation map is not available for all markets/areas.

10.12.6. Activating and deactivating warnings from Road Sign Information*

The driver can select which warnings will be activated for Road Sign Information and adjust the limits for these.

- 1 Select Settings → My Car → IntelliSafe → Road Sign Information in the center display's Top view.
- 2 Select Speed Limit Warning and choose your preferred settings.

You can choose to:

- Activate Speed Warning
- Adjust the Speed Warning limit^[1]
- Activate audible alert for Speed Warning
- Activate audible alert for speed cameras^[2]

- ^[1] The set warning limit will not be used when the speed camera symbol is displayed in the instrument panel.
- ^[2] The vehicle needs access to map data with information on speed cameras.

^{*} Option/accessory.

10.12.7. Road Sign Information* display

Road Sign Information displays road signs in different ways depending on the sign and situation. The following illustrations are examples.

Example^[1] of registered speed information.

When the function has registered a speed limit sign the sign will be displayed as a symbol in the instrument panel and a colored marking will be shown in the speedometer's speed scale.

If the vehicle is equipped with map data*, speed-related information will also be retrieved from map data, which means that the instrument panel can display or change information about speed limits even if the vehicle has not passed a speed-related sign.

Signs for "School" and "Children playing"

If the warning sign "School" or "Children playing" is included in the map data*, a symbol of this type will be displayed in the instrument panel.

* Option/accessory.

^[1] Road signs differ according to market – the illustrations shown here are just examples.

10.13. Parking functions

10.13.1. Parking Assist

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note. 479 / 1010

10.13.1.1. Park Assist*

The Park Assist function uses sensors to help the driver when maneuvering in tight spaces by indicating distances to obstacles using audible signals and graphics in the center display.

Example of display view showing obstacle zones and sensor sectors.

The center display shows an overview of the vehicle in relation to objects that have been detected.

The marked sector indicates where the obstacle is located. The closer the vehicle symbol is to a marked sector forward/rearward, the closer the detected obstacle is to your vehicle.

The side sectors change color as the distance between the vehicle and an object decreases.

The audible signals will also speed up the closer the obstacle is to the vehicle. The volume of the audio system will be automatically lowered.

Audible signals for obstacles in front and to the sides of the vehicle are active when the vehicle is moving but will cease after the vehicle has been stationary for approx. 2 seconds. Audible signals for obstacles behind the vehicle will remain active even when the vehicle is stationary.

If a detected obstacle is within approx. 30 cm (1 foot) from the front or rear of the vehicle, the tone will become constant and the active sensor field closest to the vehicle symbol will be filled in.

At distances within approx. 25 cm (0.8 foot) from an obstacle to the sides of the vehicle, a rapid pulsing signal will be given and the active sector fields will change color from orange to red.

The volume of the Park Assist audible signals can be adjusted while the signal is being given using the >II knob or in Park Assist settings.

(i) Note

Besides in the sector closest to the vehicle symbol, audible warnings are only provided for objects located directly in the vehicle's path.

/ Warning

- The function is supplementary driver support intended to facilitate driving and help make it safer it cannot handle all situations in all traffic, weather and road conditions.
- The driver is advised to read all sections in the Owner's Manual about this function to learn of its limitations, which the driver must be aware of before using the function.
- Driver support functions are not a substitute for the driver's attention and judgment. The driver is always responsible for ensuring the vehicle is driven in a safe manner, at the appropriate speed, with an appropriate distance to other vehicles, and in accordance with current traffic rules and regulations.
- * Option/accessory.

10.13.1.2. Park Assist front, rear and sides*

Park Assist behaves differently depending on which part of the vehicle is approaching an obstacle.

Front camera

The warning signal has a continuous audible tone when the obstacle is less than approx. 30 cm (1 foot) from the vehicle.

The Park Assist system's front sensors are automatically activated when the engine is started. They are active at speeds below 10 km/h (6 mph).

The distance monitored extends approx. 80 cm (2.5 feet) in front of the vehicle.

i Note

The Park Assist system is deactivated when the parking brake is used or when **P** is selected on vehicles with automatic transmission.

(!) Important

When installing auxiliary lights: Make sure these do not obscure the sensors – the auxiliary lights could be perceived as an obstacle.

Back

The warning signal has a continuous tone when the obstacle is less than approx. 30 cm (1 foot) from the vehicle.

The rear sensors will be activated if the vehicle begins rolling backward or if reverse gear is engaged.

The distance monitored extends approx. 1.5 meter (5 feet) behind the vehicle.

The Park Assist system's rear sensors will be automatically deactivated if the vehicle is backing up with a trailer connected to the vehicle's electrical system.

(i) Note

When reversing with e.g. a trailer or bike carrier on the trailer hitch – without Volvo original trailer cables – the Parking Assist system may have to be turned off manually to prevent the sensors from reacting to these.

Side sensors

The warning signal pulsates rapidly when the obstacle is less than approx. 25 cm (0.8 foot) from the vehicle.

Park Assist's side sensors are automatically activated when the engine is started. They are active at speeds below 10 km/h (6 mph).

The distance monitored is approx. 25 cm (0.8 foot) out from the sides.

The detection area of the side sensors increases significantly, however, when the steering angle of the front wheel increases and depending on the position of the steering wheel, obstacles up to approx. 90 cm (3 feet) diagonally behind or in front of the vehicle can be detected.

* Option/accessory.

10.13.1.3. Activating and deactivating the Park Assist system*

The Park Assist function can be activated or deactivated.

Park Assist's front and side sensors are automatically activated when the engine is started. The rear sensors are activated if the vehicle is moving backward or reverse gear is engaged.

Activate or deactivate the function using this button in the center display's Function view.

- Illuminated button the function is activated.
- Extinguished button the function is deactivated.

In vehicles equipped with Park Assist Camera*, Park Assist can also be activated or deactivated from the relevant camera view.

* Option/accessory.

10.13.1.4. Park Assist symbols and messages

Symbols and messages for the Park Assist may be displayed in the instrument panel and/or the center display. Several examples are provided below.

Symbol	Message	Meaning
Pw		The rear Park Assist sensors are turned off and no acoustic warnings for obstacles/objects will be provided.
	Park Assist System Sensors blocked, cleaning needed	One or more of the sensors are blocked. Check and clean/remove the obstacle as soon as possible.
	Park Assist System Unavailable Service required	The system is not functioning as intended. Contact a workshop ^[1] .

A text message can be erased by briefly pressing the O button in the center of the right-side steering wheel keypad.

If the message persists, contact a workshop. An authorized Volvo workshop is recommended.

^[1] An authorized Volvo workshop is recommended.

10.13.1.5. Park Assist limitations*

Park Assist may not be able to detect all conditions in all situations and functionality may therefore be limited in certain cases.

The driver should be aware of the following limitations for Park Assist:

/! Warning

- The Park Assist Cameras' ability to clearly reproduce the surroundings in all zones around the vehicle may be affected by the conditions during use.
- Pay particular attention to people and animals near the vehicle.
- Bear in mind that the front end of the vehicle may swing out towards oncoming traffic during the parking maneuver.
- Objects/obstacles may be closer to the vehicle than they appear on the screen.

· Warning

Be extra cautious when reversing if this symbol is shown when a trailer, bike carrier or similar is attached and electrically connected to the vehicle.

The symbol indicates that the rear parking assist sensors are **deactivated** and will not warn of any obstacles.

(!) Important

Objects such as chains, thin and glossy poles or low obstacles may end up in the "signal shadow" and then go temporarily undetected by the sensors – the pulsating tone may then unexpectedly stop instead of becoming a constant tone as expected.

The sensors cannot detect high objects, such as protruding ramps.

• In such situations, pay extra attention and maneuver/drive the vehicle very slowly or stop the current parking maneuver – there may be a high risk of damage to the vehicle or other objects since information from the sensors is not always reliable in such situations.

(!) Important

In some circumstances, the Park Assist System may produce false warnings due to external sound sources with the same ultrasonic frequencies as those the system works with.

Examples of such sources are horns, wet tires on asphalt, pneumatic brakes, exhaust noise from motorcycles, etc.

(i) Note

When a trailer hitch is configured with the vehicle electrical system, the trailer hitch protrusion is included when the function measures the distance to objects behind the vehicle.

* Option/accessory.

10.13.2. Park Assist Pilot

10.13.2.1. Park Assist Pilot*

Park Assist Pilot (PAP^[1]) can help the driver maneuver the vehicle when parking. The function can also assist with steering when pulling out from a parallel parking space.

The function first checks whether there is sufficient space and then helps the driver steer the vehicle into the space.

The center display uses symbols, graphics and messages to inform the driver of what steps need to be taken and when.

/ Warning

- The function is supplementary driver support intended to facilitate driving and help make it safer it cannot handle all situations in all traffic, weather and road conditions.
- The driver is advised to read all sections in the Owner's Manual about this function to learn of its limitations, which the driver must be aware of before using the function.
- Driver support functions are not a substitute for the driver's attention and judgment. The driver is always responsible for ensuring the vehicle is driven in a safe manner, at the appropriate speed, with an appropriate distance to other vehicles, and in accordance with current traffic rules and regulations.
- * Option/accessory.
- ^[1] Park Assist Pilot

10.13.2.2. Types of parking with Park Assist Pilot*

Park Assist Pilot (PAP^[1]) can be used for both parallel and perpendicular parking.

Parallel parking

Overview of parallel parking.

The function helps park the vehicle using the following steps:

- 1. The system searches for and measures potential parking spaces.
- 2. The vehicle is steered while it is backing into the parking space.
- 3. The vehicle's position in the space is adjusted by driving forward/backward.

The Park Out function can also help the driver pull out of parking spaces.

Perpendicular parking

Perpendicular parking overview.

The function helps park the vehicle using the following steps:

- 1. The system searches for and measures potential parking spaces.
- 2. The vehicle is steered while it is backing into the space and its position is adjusted by driving forward/backward.

(i) Note

Leaving a parking space with the Park Out function should only be used in connection with parallel parking - it does not work for perpendicular parking.

* Option/accessory.

^[1] Park Assist Pilot

10.13.2.3. Using Park Assist Pilot*

Park Assist Pilot (PAP^[1]) helps the driver park using three different steps. The function can also help the driver pull out of a parking space.

The function measures the space and steers the vehicle. The driver's role is to:

- keep close watch of the area around the vehicle .
- follow the instructions on the center display .
- change gears (reverse/forward) an audible signal indicates when the driver needs to change gears
- regulating and maintaining a safe speed
- applying the brakes and stopping the vehicle. .

Information about the actions required by the driver are provided in the center display using symbols, graphics and/or text.

488 / 1010

The function can be activated if the following criteria have been met after the engine is started:

- No trailer is hitched to the vehicle
- Your vehicle's speed is lower than 30 km/h (20 mph).

(i) Note

P€

The distance between the vehicle and parking spots should be 0.5-1.5 meters (1.6-5.0 ft) when the function is looking for parking.

Parking with Park Assist Pilot

The function helps park the vehicle using the following steps:

- 1. The system searches for and measures potential parking spaces.
- 2. The vehicle is steered while it is backing into the parking space.
- 3. The vehicle is positioned in the parking space (the driver may be prompted to shift gears and apply the brakes).

Searching and measuring potential parking spots

The function can be activated in the center display's Function view.

It can also be accessed from the camera views.

- Illuminated button the function is activated.
- Extinguished button the function is deactivated.

Perpendicular parking search overview.

Vehicle speed may not exceed 30 km/h (20 mph) when parking.

- 1 Tap Park In in Function view or in Camera view.
- > The function will search for a potential parking space and measure it to determine if it is big enough.
- **2** Be prepared to stop the vehicle when a graphic and message in the center display indicate that a suitable parking space has been found.
- > A pop-up window will appear.
- 3 Select Parallel parking or Perpendicular parking and engage reverse gear.

(i) Note

The function searches for space for parking, shows instructions and guides the vehicle on its passenger side. But, if so desired the vehicle can be parked on the driver's side of the street:

• Activate the turn signals on the driver's side – the system will then search for space to park on that side of the vehicle instead.

Backing into a parallel parking spot overview.

Backing into a perpendicular parking spot overview.

- Make sure the path behind your vehicle is clear and engage reverse gear. 1
- Back up slowly and carefully without touching the steering wheel and do not exceed a speed of 7 km/h (4 mph). 2
- Be prepared to stop the vehicle when instructed to do so by a graphic and message in the center display. 3

(i) Note

- Keep your hands away from the steering wheel when the function is activated. .
- Make sure that the steering wheel is not hindered in any way and can rotate freely.
- To achieve the best results wait until the steering wheel is finished turning before beginning to drive forward/in . reverse.

Parallel parking positioning overview.

Perpendicular parking positioning overview.

- 1 Move the gear selector to the gear instructed by the system. Wait until the steering wheel turns and then drive slowly forward.
- 2 Be prepared to stop the vehicle when instructed to do so by a graphic and message in the center display.
- 3 Engage reverse gear and back up slowly.
- **4** Be prepared to apply the brakes when instructed to do so by a graphic and message in the center display.

The function will switch off automatically and a graphic and message will appear to indicate that parking has been completed. Adjustments can always be made be the driver afterward. Only the driver can determine when the vehicle is correctly parked.

(!) Important

The warning distance is shorter when the sensors are used by Park Assist Pilot (PAP^[1]) compared to when they are used by the Parking Assist system.

Auto-brake during a parking sequence

If, while parking, the parking sensors detect a vehicle or pedestrian in the vehicle's intended direction of travel behind or in front of the vehicle, the auto-brake function will bring the vehicle to a standstill.

A pop-up message will then appear in the instrument panel and the driver can tap **Cancel** to cancel the parking sequence or **Resume** to continue the parking sequence.

After selecting Resume:

Check that the area around the vehicle is free of obstructions and follow the instructions on the center display, such as:
 To continue – Gently accelerate away from object.

* Option/accessory.

^[1] Park Assist Pilot

10.13.2.4. Leaving a parallel parking space with Park Assist Pilot*

The Park Out function can help the driver to pull out of a parking space when the vehicle is parallel-parked.

(i) Note

Leaving a parking space with the **Park Out** function should only be used in connection with parallel parking – it does not work for perpendicular parking.

The Park Out function is activated in the center display's Function view or in Camera view.

- Illuminated button the function is activated.
- Extinguished button the function is deactivated.
 - 1 Tap Park Out in Function view or in Camera view.
 - 2 Move the gear selector to the suitable position (e.g. D or R) for the direction in which you will be pulling out of the parking space.
 - **3** Be prepared to stop the vehicle when instructed to do so by a graphic and message in the center display. Follow the instructions in the same way as for the parking procedure.

Note that the steering wheel can "spring" back when the procedure is completed and the driver may need to turn the steering wheel back to the maximum position in order to pull out of the parking space.

If the function determines that the driver can pull out of the parking space without any extra maneuvers, the function will be deactivated, even if it seems as though the vehicle is not completely out of the parking space.

* Option/accessory.

10.13.2.5. Park Assist Pilot* messages

Messages for Park Assist Pilot (PAP^[1]) may be displayed in the instrument panel and/or the center display. Several examples are provided below.

Message	Meaning
Park Assist System Sensors blocked, cleaning needed	One or more of the sensors are blocked. Check and clean/remove the obstacle as soon as possible.
Park Assist System Unavailable Service required	The system is not functioning as intended. Contact a workshop $^{\left[2\right] }.$

A text message can be erased by briefly pressing the O button in the center of the right-side steering wheel keypad.

If the message persists, contact a workshop. An authorized Volvo workshop is recommended.

- ^[1] Park Assist Pilot
- ^[2] An authorized Volvo workshop is recommended.

10.13.2.6. Park Assist Pilot* limitations

Park Assist Pilot (PAP^[1]) may not be able to detect all conditions in all situations and functionality may therefore be limited.

The driver should be aware of the following limitations for Park Assist Pilot.

· Warning

- The Park Assist Cameras' ability to clearly reproduce the surroundings in all zones around the vehicle may be affected by the conditions during use.
- Pay particular attention to people and animals near the vehicle.
- Bear in mind that the front end of the vehicle may swing out towards oncoming traffic during the parking maneuver.
- Objects/obstacles may be closer to the vehicle than they appear on the screen.

Important

Objects situated higher than the detection area of the sensors are not included when the parking maneuver is calculated, which could cause the function to swing into the parking space too early. Such parking spaces should be avoided for this reason.

The parking sequence is cancelled

A parking sequence will be cancelled if:

- the driver moves the steering wheel
- the vehicle's speed exceeds 7 km/h (4 mph)
- the driver taps Cancel in the center display
- when the anti-lock brakes or the Electronic stability control are engaged e.g. when a wheel loses grip on a slippery road
- when speed-dependent power steering wheel resistance is working at reduced power e.g. during cooling due to
 overheating.
- when, while parking, the parking sensors detect a vehicle or pedestrian in the vehicle's intended direction of travel behind or in front of the vehicle, the auto-brake function will bring the vehicle to a standstill.

A message in the center display will explain why the parking sequence was cancelled.

(!) Important

Under certain circumstances, the function may not be able to find parking spaces - one reason may be that the sensors are disrupted by external sound sources that emit the same ultrasonic frequencies that the system works with.

Examples of such sources include horns, wet tires on asphalt, pneumatic brakes, exhaust noise from motorcycles, etc.

(i) Note

Dirt, ice and snow covering the sensors reduce their function and can make measurement impossible.

Driver responsibility

The driver should keep in mind that the function is a parking aid – not an infallible fully automatic system. The driver must always be prepared to take control and cancel a parking sequence if necessary.

There are a number of things to keep in mind when parking, including:

- The driver is always responsible for determining if the space suggested by the function is suitable for parking.
- Do not use the function when using snow chains or a temporary spare tire.
- Do not use the function if there are any objects protruding from the vehicle. .
- Heavy rain or snowfall may inhibit PAP's ability to accurately measure a parking space.
- While searching and measuring the parking space, the function may be unable to detect objects located far into the space. Ð
- PAP may not suggest parking spaces on narrow streets if it does not detect sufficient space for maneuvering the vehicle. Ð
- Use approved tires^[2] inflated to the correct tire pressure because this affects the function's ability to provide parking assistance.
- The function is based on the way the vehicles are parked behind and in front of your parking space. If they are, for example, parked too close to the curb, there is a risk that your vehicle's tires or wheel rims could be damaged by the curb during the parking procedure.
- Perpendicular parking spaces may not be detected or may be suggested unnecessarily if a parked vehicle is sticking out . more than other parked vehicles.
- The function is intended to provide parking assistance on straight streets, not sections of street with sharp curves or bends. Always make sure that your vehicle is parallel to relevant parking spaces when the function is measuring the parking space.
- * Option/accessory.

^[1] Park Assist Pilot

^[2] "Approved tires" refers to tires of the same type and make as the vehicle's original, factory-installed tires.

10.13.3. Park Assist Camera

496 / 1010

10.13.3.1. Park Assist Camera*

The Park Assist Camera can assist the driver when maneuvering in tight spaces by indicating obstacles using the camera screen and graphics in the center display.

Example camera view.

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note. 498 / 1010

- **1** Zoom^[1] zoom in/out
- 2 360° view * activate/deactivate all cameras
- **3** PAS^[2] activates/deactivates Park Assist system sensors
- 4 Lines activate/deactivate trajectory lines
- 5 Towbar* activate/deactivate trajectory lines for towbar*^[3]
- 6 CTA* activate/deactivate Cross Traffic Alert

The Park Assist Camera is a support function that is automatically activated when reverse gear is engaged. It can also be started manually in the center display.

Warning

- The Park Assist Cameras' ability to clearly reproduce the surroundings in all zones around the vehicle may be affected by the conditions during use.
- Pay particular attention to people and animals near the vehicle.
- Bear in mind that the front end of the vehicle may swing out towards oncoming traffic during the parking maneuver.
- Objects/obstacles may be closer to the vehicle than they appear on the screen.

Warning

- The function is supplementary driver support intended to facilitate driving and help make it safer it cannot handle all situations in all traffic, weather and road conditions.
- The driver is advised to read all sections in the Owner's Manual about this function to learn of its limitations, which the driver must be aware of before using the function.
- Driver support functions are not a substitute for the driver's attention and judgment. The driver is always responsible for ensuring the vehicle is driven in a safe manner, at the appropriate speed, with an appropriate distance to other vehicles, and in accordance with current traffic rules and regulations.
- * Option/accessory.
- ^[1] The trajectory lines will not be displayed when zooming in.
- ^[2] Park Assist System
- ^[3] Not available for all models and markets.

10.13.3.2. Activating Park Assist Camera*

The Park Assist Camera is automatically activated when reverse gear is engaged or can be started manually using one of the center display's function buttons.

Camera view when backing up

499 / 1010

When reverse gear is engaged, the screen shows the rear view^[1].

Camera view when manually activating the camera

Activate the Park Assist Camera using this button in the center display's Function view. The screen will first show the most recently used camera view. However, each time the engine is started, the previous side view will be replaced by the 360° view and a previously displayed zoomed-in rear view will be replaced by the regular rear view.

- Illuminated button the function is activated.
- Extinguished button the function is deactivated.

Automatically deactivating the camera

Front view switches off when the vehicle's speed reaches 25 km/h (16 mph) to help avoid distracting the driver. It will be automatically reactivated if the vehicle's speed falls below 22 km/h (14 mph) within 1 minute as long as the vehicle's speed has not exceeded 50 km/h (31 mph).

Other camera views switch off at 15 km/h (9 mph) and are not reactivated.

* Option/accessory.

^[1] In Canada, it is also possible to choose the 360° view. For the US, rear view is standard and cannot be changed.

10.13.3.3. Park Assist Camera symbols and messages*

Symbols and messages for the Park Assist Camera may be displayed in the instrument panel and/or the center display. Several examples are provided below.

Symbol	Message	Meaning
Pw		The rear Park Assist sensors are turned off and no acoustic warnings or field markings for obstacles/objects will be provided.
'\```\ "		The camera is not functioning properly.
	Park Assist System Sensors blocked, cleaning needed	One or more of the sensors are blocked. Check and clean/remove the obstacle as soon as possible.
	Park Assist System Unavailable Service required	The system is not functioning as intended. Contact a workshop ^[1] .

A text message can be erased by briefly pressing the O button in the center of the right-side steering wheel keypad.

If the message persists, contact a workshop. An authorized Volvo workshop is recommended.

* Option/accessory.

^[1] An authorized Volvo workshop is recommended.

10.13.3.4. Park Assist Camera trajectory lines*

The Park Assist Camera uses trajectory lines and fields on the screen to indicate the vehicle's position in relation to its immediate surroundings.

Example of trajectory lines

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note. 502 / 1010 The trajectory lines show the anticipated trajectory for the vehicle's outermost dimensions based on the current position of the steering wheel and can help simplify parallel parking, backing into tight spaces or attaching a trailer.

The lines on the screen are projected as if they were painted lines on the ground behind the vehicle and are directly affected by the way in which the steering wheel is turned. This makes it possible for the driver to see path the vehicle will take, even if he/she turns the steering wheel.

These lines also indicate the outermost limits that any object (towbar, rearview mirrors, corners of the body, etc.) extends out from the vehicle.

Note (i)

- When backing up with a trailer that is not electrically connected to the vehicle, the trajectory lines on the screen show the path the **vehicle** will take - not the trailer.
- The screen does not show guide lines when a trailer is electrically connected to the vehicle's electrical system.
- Guide lines are not shown when zooming in.

() Important

- Bear in mind that when the rearward camera view is selected, the screen only shows the area behind the vehicle pay attention to the sides and front of the vehicle when steering while reversing.
- The same applies to the reverse pay attention to what is happening with the rear parts of the vehicle when the front camera view is selected.
- Note that the guide lines show the **shortest** path pay extra attention to ensure that the vehicle sides do not come in contact with/travel over anything when steering while driving forward or that the vehicle front moves toward/over anything when steering while reversing.

Trajectory lines in 360° view*

360° view with trajectory lines

In the 360° view, trajectory lines are shown behind, in front of, or to the sides of the vehicle, depending on the direction of travel.

When driving forward: Front lines

When backing up: Side lines and rear lines Ð

When the front or rear camera is selected, the trajectory lines will be shown regardless of the vehicle's direction of travel.

With a side camera selected, the trajectory lines will only be shown if the vehicle is backing up.

Towbar with trajectory line

1 Towbar - activate trajectory lines for towbar.

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note. 505 / 1010

To use the camera when hitching a trailer:

- 1 Tap Towbar (1).
- > The trajectory line for the towbar's anticipated path toward the vehicle will appear and the vehicle's trajectory lines will disappear.

Trajectory lines cannot be displayed for both the vehicle and the towbar at the same time.

- 2 Tap Zoom (2) for a close-up view for more precise maneuvering.
- > The camera will zoom in.
- * Option/accessory.

10.13.3.5. Location and field of vision of Park Assist Cameras*

The Park Assist Cameras can individually show rear, front, left or right camera views. You can also get a combined 360° view showing the views from all sides of the vehicle.

360° view*

Example of parking cameras' fields of vision and approximate coverage areas.

The **360° view** function activates all Park Assist Cameras and all four sides of the vehicle are shown in the center display at once to help the driver see what is around the vehicle while maneuvering at low speeds. From the 360° view, each camera view

can be activated separately. Tap the screen to display the camera symbols and select a view. These camera symbols disappear after a moment if the screen is not touched.

The active cameras will be indicated by a camera symbol on the vehicle symbol in the center display.

If the vehicle is equipped with **Park Assist System***, the distance to detected obstacles will be illustrated by fields in different colors.

The cameras can be activated automatically or manually.

Back

The rear camera is located above the license plate.

The rear camera shows a wide area behind the vehicle. On certain models, part of the bumper and the towbar (if installed) may be visible.

Objects in the center display may appear to be leaning slightly. This is normal.

Front camera

The front Park Assist Camera is located in the grille.

The front camera can be useful when pulling out from areas with limited visibility, such as when pulling out of a garage. The front camera is active at speeds up to 25 km/h (16 mph) and is automatically turned off when the vehicle exceeds this speed.

If the vehicle does not reach a speed of 50 km/h (30 mph) and speed falls below 22 km/h (14 mph) within 1 minute after the front camera turns off, the camera will be reactivated.

Side cameras

The side cameras are located in the rearview mirrors.

The side cameras can show views along each side of the vehicle.

* Option/accessory.

10.13.3.6. Park Assist sensor field*

If the vehicle is equipped with Park Assist, distances will be shown in the Park Assist Camera's 360° view with colored fields for each sensor that has detected an obstacle.

Front and rear sensors

The screen can display colored sensor fields on the vehicle symbol.

The front and rear fields change colors (from y	The front and rear fields change colors (from yellow to orange to red) as the vehicle moves closer to an obstacle.			
Field color rearward	ward Distance in meters (feet)			
Yellow	0.6-1.5 (2.0-4.9)			
Orange	0.3-0.6 (1.0-2.0)			
Red	0-0.3 (0-1.0)			

Field color forward	Distance in meters (feet)
Yellow	0.6–0.8 (2.0–2.6)
Orange	0.3-0.6 (1.0-2.0)
Red	0-0.3 (0-1.0)

When the sensor field color is red, the audible pulsing sounds will change to a continuous tone.

Side sensor fields

Warning signals vary depending on the vehicle's intended direction of travel. Depending on the steering wheel position, warnings may be given for obstacles diagonally in front of or behind the vehicle, not only directly behind the vehicle.

Parking sensor sectors where obstacles can be detected.

- 1 Left-side front sensor field
- 2 Obstacle sector in the vehicle's intended direction of travel forward varies according to steering wheel position
- **3** Sector with red field color and rapidly pulsing tone
- 4 Right-side rear sensor field
- **5** Obstacle sector in the vehicle's intended direction of travel rearward varies according to steering wheel position.

The color of the side field changes as the vehicle moves closer to the object – from yellow to red.		
Side field color	Distance in meters (feet)	
Yellow	0.25-0.9 (0.8-3.0)	
Red	0-0.25 (0-0.8)	

When the sensor field is red, the audible pulsing signal will become more rapid.

10.14. Camera and radar sensor

10.14.1. Recommended maintenance for the camera and radar units

In order for the camera and radar units to function properly, they must be kept free of dirt, ice, snow, etc. and should be washed regularly with water and car washing detergent.

(i) Note

Dirt, ice and snow covering the sensors could cause false warnings, reduced function, or no function.

The areas that should be kept clean, on both the left and right sides of the vehicle, are marked in the following illustrations.

Location of the parking sensors around the vehicle

Location of front camera and radar sensor

Location of rear radar sensors

- For best possible performance, it is important to keep the areas in front of the sensors clean.
- Do not attach any objects, tape or decals to the surface of the sensors.
- Clean the camera lenses regularly using lukewarm water and car washing detergent. Wash gently to avoid scratching the lens.

(!) Important

Only a workshop may perform maintenance on driver support components – an authorized Volvo workshop is recommended.

10.14.2. Camera and radar unit symbols and messages

Here are examples of some of the messages and symbols related to the camera and radar units that may be displayed in the instrument panel.

Sensor blocked

If this symbol and the message **Windscreen sensor Sensor blocked**, **see Owner's manual** is displayed in the instrument panel, it means that the camera and radar unit are unable to detect other vehicles, cyclists, pedestrians and large animals in front of the vehicle and that the vehicle's camera and radar-based functions may be obstructed.

The following table shows some of the situations that can cause the message to be displayed, and suggested actions:

Cause	Action
The area of the windshield in front of the camera/radar sensor is dirty or covered by ice or snow.	Clean the windshield in front of the camera/radar sensor and remove dirt, ice and snow.
Thick fog, heavy rain or snow is blocking the radar signals or the camera's range of visibility.	No action. Heavy precipitation may sometimes prevent the camera/radar sensor from functioning.

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note.

Cause	Action
Water or snow is spraying/swirling up and blocking the radar signals or the camera's range of visibility.	No action. Very wet or snow-covered roads may sometimes prevent the camera/radar sensor from functioning.
Dirt has collected between the inside of the windshield and the camera.	Consult a workshop to have the area of the windshield on the inside of the camera's casing cleaned. An authorized Volvo workshop is recommended.
Bright sunlight.	No action. The camera/radar sensor will reset automatically when lighting conditions improve.

Defective camera

If a camera sector is dark and contains this symbol, this indicates that the camera is not functioning properly.

Example indicating that the vehicle's left camera is malfunctioning.

A dark camera sector may also be displayed in the following situations, but **without** the defective camera symbol:

- a door is open
- the tailgate is open
- a rearview mirror is folded in

Rear Park Assist Camera

Warning

Pill ele Th

Be extra cautious when reversing if this symbol is shown when a trailer, bike carrier or similar is attached and electrically connected to the vehicle.

The symbol indicates that the rear parking assist sensors are **deactivated** and will not warn of any obstacles.

10.14.3. Camera and radar unit limitations

The camera and radar used by several of the driver support functions have certain limitations, which also affect the functions using the camera and radar units. The driver should be aware of the following limitations:

Common camera and radar limitations

Cameras and radar are aids for intelligent driving that cannot be called upon to achieve intelligent driving, and necessary safety management must be implemented to avoid traffic safety risks or accidents caused by the driver's incorrect use of cameras and radar.

Obstructed camera

Do not place, affix or mount anything in front of or around the camera and radar units – this could disrupt camera- and radarbased functions. It could cause functions to be reduced, deactivated completely or to produce an incorrect function response.

High temperatures

If the temperature in the passenger compartment is very high, the camera and radar will switch off temporarily for approx. 15 minutes after the engine is started to protect their electronic components. When the temperature has cooled sufficiently, the units will automatically restart.

Damaged windshield

When a camera or radar is mounted in the windshield, the following also applies:

- If there are cracks, scratches or stone chips in front of the unit covering an area of about 0.5 × 3.0 mm (0.02 × 0.12 in.) or more, contact a workshop^[1] to have the windshield replaced.
- Volvo advises **against** repairing cracks, scratches or stone chips in the area in front of the unit the entire windshield should instead be replaced.
- Before replacing the windshield, contact a workshop^[1] to verify that the right windshield has been ordered and installed.
- The same type of windshield wipers or wipers approved by Volvo should be used for replacement.
- If the windshield is replaced, the camera and radar sensor must be recalibrated by a workshop^[1] to help ensure proper functioning of all of the vehicle's camera and radar-based systems.

(i) Note

Failure to take action could result in reduced performance for the driver support systems that use the camera and/or radar units. It could cause functions to be reduced, deactivated completely or to produce an incorrect function response.

Additional radar limitations

Vehicle speed

The radar sensor's ability to detect a vehicle ahead is significantly reduced if the speed of the vehicle ahead differs greatly from your vehicle's speed.

Limited field of vision

The radar sensor has a limited field of vision. In some situations, it may detect a vehicle later than expected or not at all.

በ The radar sensor's detection of vehicles very close to your vehicle may be delayed in certain situations, e.g. if a vehicle pulls in between your vehicle and the vehicle directly ahead.

2 Small vehicles, such as motorcycles, or vehicles that are not driving in the center of the lane may remain undetected.

3 In curves, the radar may detect the a different vehicle than intended or lose sight of a target vehicle.

Low trailers

Low trailer in the radar shadow

Low trailers may also be difficult or even impossible for the radar to detect. The driver should be extra alert when driving behind vehicles towing low trailers when Adaptive Cruise Control* or Pilot Assist* is activated.

Additional camera limitations

Reduced visibility

Cameras have the same limitations as the human eye. In other words, their "vision" is impaired by adverse weather conditions such as heavy snowfall/rain, dense fog, swirling dust/snow, etc. These conditions may reduce the function of systems that depend on the camera or cause these systems to temporarily stop functioning.

Strong sunlight, reflections from the road surface, ice or snow covering the road, a dirty road surface, or unclear lane marker lines may drastically reduce the camera's ability to detect the side of a lane, a pedestrian, a cyclist, a large animal or another vehicle.

Bicycle holders or other accessories mounted behind the vehicle may obstruct the camera's view.

Additional Park Assist Camera* limitations

There are "blind" sectors between the cameras' fields of vision.

With the Park Assist Camera's 360° view * selected, objects/obstacles may not be detected if they are located in the "joints" where the edges of the individual camera views meet.

/ Warning

Even if it seems as though only a fairly small section of the screen image is obstructed, this may mean that a relatively large sector is hidden and obstacles there may not be detected until they are very near the vehicle.

Lighting conditions

The camera image is automatically adjusted according to the current lighting conditions. This means that the brightness and quality of the image may vary slightly. Poor lighting conditions may result in reduced image quality.

- ^[1] An authorized Volvo workshop is recommended.
- * Option/accessory.

10.14.4. Camera

The camera is used by several driver support systems to e.g. detect lane marker lines or road signs.

Location of the camera

The camera is used by the following functions:

- Adaptive Cruise Control*
- Pilot Assist*
- Lane Keeping Aid *
- City Safety
- Steering assistance at risk of collision
- Driver Alert Control*
- Road Sign Information*
- Active high beams*
- Park Assist*

(!) Important

Do not attempt to access the camera with sharp or foreign objects through the ventilation openings as this could damage the equipment.

* Option/accessory.

10.14.5. Radar sensor

Radar is used by several driver support systems to detect other vehicles.

Location of the front radar sensor

The radar sensor is used by the following functions:

- Distance Alert*
- Adaptive Cruise Control*
- Pilot Assist*
- Lane Keeping Aid
- City Safety
- Steering assistance at risk of collision

Any modifications to the radar sensor may make its use illegal.

* Option/accessory.

10.14.6. Radar sensor type approval

The type approval for the vehicle's radar units for adaptive cruise control* (ACC^[1]), Pilot Assist* and BLIS* ^[2] are found here.

Market	ACC & PA	BLIS	Type approval
Canada	/		FCC ID: L2C0054TR IC: 3432A-0054TR FCC ID: L2C0055TR IC: 3432A-0055TR
		1	Canada Standard RSS-310
USA Y FCC ID: L2C00 FCC ID: L2C00			FCC ID: L2C0054TR IC: 3432A-0054TR FCC ID: L2C0055TR IC: 3432A-0055TR
		1	FCC ID: NBG01RS4

This device complies with Part 15 of the FCC Rules and with Industry Canada license-exempt RSS standard(s). Operation is subject to the following two conditions:

(1) This device may not cause harmful interference, and

(2) This device must accept any interference received, including interference that may cause undesired operation.

Ce dispositif de radiocommunication de catégorie II respecte la norme CNR-310 d'Industrie Canada. Le présent appareil est conforme aux CNR d'Industrie Canada applicables aux appareils radio exempts de licence. L'exploitation est autorisée aux deux conditions suivantes:

(1) l'appareil ne doit pas produire de brouillage, et

(2) l'utilisateur de l'appareil doit accepter tout brouillage radioélectrique subi, même si le brouillage est susceptible d'en compromettre le fonctionnement.

Cet appareil est conforme aux CNR d'Industrie Canada a applicables aux appareils radio exempts de licence. L'exploitation est autorisée à condition que l'appareil ne produise pas de brouillage préjudiciable et qu'il accepte tout brouillage, même celui susceptible d'en compromettre le fonctionnement.

CAUTION TO USERS: Changes or modifications not expressively approved by the party responsible for compliance could void the user's authority to operate the equipment. The term "IC:" before the radio certification number only signifies that Industry Canada technical specifications were met.

Note: This equipment complies with radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with minimum distance of 20 cm between the radiator and your body.

- * Option/accessory.
- ^[1] Adaptive Cruise Control
- ^[2] Blind Spot Information

10.15. Driver support systems

The vehicle is equipped with a number of driver support systems that can provide the driver with active or passive assistance in various situations.

The systems can, for example, help the driver:

- maintain a set speed
- maintain a set time interval to the vehicle ahead
- help prevent a collision by warning the driver and applying the brakes
- park the vehicle.

Some of the systems are standard and others are options. This also varies from market to market.

/ Warning

The driver support systems are only supplementary aids – they cannot manage all situations in all conditions.

The driver is always responsible for ensuring that the vehicle is driven in a safe manner and in accordance with applicable traffic rules and regulations.

10.16. Driver support safety check at start

When you start the vehicle after the ignition has been completely switched off, a safety check of the vehicle's driver support systems will be displayed in the instrument panel. The check shows which driver support functions the vehicle has and if they are ready to be used.

The safety check is shown in the instrument panel

The illustration shows a 12" instrument panel

The green dots indicate that everything looks good. If any system needs an extra check, this will be indicated by an orange dot and a message in the instrument panel.

(i) Note

Available driver support systems may vary depending on the market, options, car model and model year.

10.17. Driver support warnings

If you find that the vehicle is acting in a way that you did not expect, it may be that one of the vehicle's safety-related functions has been activated.

What is happening in your vehicle?

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note.

There are a number of functions in your vehicle that can actively help to improve safety in traffic, both for you and for other road users. To help prepare you in the event any of the functions is suddenly activated, an overview is provided here of some of the functions and how they might react. If a function is activated, you can also be notified of this via a text message in the instrument panel.

(i) Note

Read the individual parts about each system to fully understand the functions and be notified of important warnings.

Warning with symbols, sounds, lights or vibration

The driver support functions in your vehicle can alert you in different ways. They can provide alerts through e.g. vibrations in the steering wheel, brake pulsations, visible or audible signals, or through symbols in the instrument panel.

City Safety[™]

City Safety is a function that can help prevent or mitigate a collision with pedestrians, cyclists, large animals or other vehicles. Light, sound and pulsations in the brake pedal are provided to alert of a possible collision and help the driver act in time to prevent it. If the driver does not react to the warning and the risk of collision is determined to be imminent, City Safety can automatically apply the brakes.

- Brake pedal pulsations, lights and audible signals.
- The brakes will be applied in certain situations if the driver does not act within a reasonable amount of time.

Steering assistance at risk of collision

The assistance during collision risks function can help you reduce the risk of the vehicle inadvertently veering out of its lane and/or colliding with another vehicle or obstacle. The function can assist by helping you steer the vehicle back into its own lane and/or swerve out of the way.

How the function is experienced can therefore differ depending on which subfunction is activated.

- Run-Off Mitigation with steering assistance.
- Steering assistance during collision risks from oncoming traffic.
- Steering assistance during collision risks from behind.

Lane Keeping Aid (LKA^[1])

Lane Keeping Aid can help you reduce the risk of the vehicle inadvertently veering out of its own lane. Because you can set preferences for how the function provides assistance, individual experiences of this safety function may vary.

- Assist: If the function detects that the vehicle is approaching a lane marker line, you will feel light pressure applied to the Ð steering wheel. Both hands must be on the steering wheel for this function to work.
- Warning: If the function detects that the vehicle is approaching a lane marker line, you will be alerted through vibrations in Ð the steering wheel.
- Both: You are alerted with vibrations and light pressure on the steering wheel.

Blind Spot Information (BLIS)

BLIS is designed to help provide assistance in heavy traffic with several lanes moving in the same direction by alerting the driver to rapidly approaching vehicles and to the presence of vehicles in the "blind spot" area behind and to the side of your vehicle.

Warning with an indicator light in the door mirror, with steady and flashing lights.

Driver Alert

The function is designed to catch the driver's attention if he/she starts driving inconsistently, for example, if the driver is distracted or starts to fall asleep.

Audible signal combined with a symbol in the instrument panel and a message.

Cross Traffic Alert (CTA)*

Cross Traffic Alert is a function designed to alert the driver of crossing traffic when the vehicle is backing up.

- Audible signals from the left or right loudspeakers depending on the direction from which the object is approaching Ð
- Icon in the driver's display Ð
- Icon in the park assist camera's top view

Roll Stability Control (RSC)

Roll Stability Control is a stabilization system that can help reduce the risk of overturning and spinning in certain situations, e.g. sudden evasive maneuvers or if the vehicle begins to skid. If the system detects that the vehicle is at risk of overturning, it can react by:

- The engine torque is reduced.
- One or several wheels braked.

·\ Warning

The functions described here are supplementary aids - they cannot manage all situations in all conditions.

The driver is always responsible for ensuring that the vehicle is driven in a safe manner and in accordance with applicable traffic rules and regulations.

^[1] Lane Keeping Aid

* Option/accessory.

10.18. Speed-dependent steering wheel resistance

Speed-dependent power steering increases the steering wheel resistance in pace with the vehicle's speed, which can help give the driver an enhanced feeling of control and stability. Steering is stiffer on highways. When parking and at low speeds, it will be easier to move the steering wheel.

Reduced power

In rare situations, the power steering may need to work at reduced power and the steering wheel may then feel more difficult to move. This may happen when the power steering becomes too hot and needs to be temporarily cooled. It can also happen if there is a disturbance in power supply.

If there is reduced power, the message **Power steering Assistance temporarily reduced** and this symbol are shown in the instrument panel.

While the power steering is working at reduced power, the driver support functions and systems with steering assistance are not available.

/ Warning

If the temperature rises too high, the power steering may be forced to switch off completely. In such a situation, the driver display shows the message **Power steering failure Stop safely** along with a symbol.

Changing the level of steering wheel resistance*

In INDIVIDUAL drive mode, the level of steering wheel resistance can be adjusted.

- 1 Tap **Settings** in the center display's Top view.
- 2 Select My Car \rightarrow Drive Modes \rightarrow Steering Force.

Steering wheel resistance settings can only be accessed if the vehicle is stationary or is moving straight ahead at a low speed.

* Option/accessory.

10.19. Drive modes when using time interval to vehicle

The driver can choose different drive modes to determine how driver support should maintain a time interval to the vehicle ahead.

Settings are made using the DRIVE MODE controls.

Select one of the following:

- Pure Driver support will focus on providing good fuel economy, which will increase the time interval to the vehicle ahead.
- Hybrid Driver support will focus on following the set time interval to the vehicle ahead as smoothly as possible.
- **Power** Driver support will focus on following the set time interval to the vehicle ahead more exactly, which could mean faster acceleration and heavier braking.

10.20. Braking assist after a collision

In a collision in which the activation level is reached for the pyrotechnic seat belt tensioners or airbags, or if a collision with a large animal is detected, the vehicle's brakes will be automatically activated. This function is intended to help prevent or reduce the effects of any subsequent collision.

After a serious collision, it may no longer be possible to control and steer the vehicle. In order to avoid or mitigate a possible further collision with a vehicle or an object in the vehicle's path, the brake assist system is activated automatically to help stop the vehicle safely.

The brake lights and hazard warning flashers are activated during braking. When the vehicle has stopped, the hazard warning flashers will continue to flash and the parking brake will be applied.

If braking is not appropriate, e.g. if there is a risk of being hit by passing traffic, the driver can override the system by depressing the accelerator pedal.

This function assumes that the brake system is intact after a collision.

11. Electric motor and charging

11.1. Charging hybrid battery

11.1.1. Charging status in the instrument panel

Charging status is indicated in the instrument panel using both graphics and messages. This information is displayed as long as the instrument panel is active.

Color	Message	Meaning
Flashing blue	Fully charged at: [Time] displayed along with an animated blue pulsing light through the charging cable.	Charging is in progress and the approximate time at which the bat- tery will be fully charged is displayed.
Green	Charging complete is displayed. An image will be superimposed over the graphic of the vehicle with a green LED indicator light in the socket.	The battery is fully charged.
Red	Charging error will be displayed. The LED indicator light in the charging socket will be red.	 Malfunction. Check the charging cable's connection to the vehicle's charging socket and the power source. Then restart charging by following these steps: Unplug the charging cable from the charging socket. Wait a few seconds. Plug the charging cable back into the charging socket. If the problem persists, contact your Volvo retailer.

i Note

If the instrument panel is not used, it will go dark after a period of time. To reactivate the display:

- depress the brake pedal,
- open one of the doors, or
- put the ignition in mode I by pressing the START button and then releasing.

11.1.2. Regenerative braking*

The vehicle recovers kinetic energy during braking in order to reduce fuel consumption and emissions.

The battery symbol is shown in the driver display when the car is generating power for the battery.

The function is available in all drive modes together with gear selector position D or B.

Activating brake regeneration

Brake regeneration is activated by gentle pressure on the brake pedal or during engine braking.

Regeneration increases during engine braking if manual gear selector position B is selected.

* Option/accessory.

11.1.3. Charging status in the vehicle's charging socket

The LED indicator light in the vehicle's charging socket shows the current charging status. The different colors of the LED indicator light are explained in the table below.

LED indicator light's color	Meaning	
White	Courtesy light	
Yellow	Wait mode ^[1] – waiting for charging to start.	
Flashing green	Charging is in progress ^[2] .	
Green	Charging completed ^[3]	
Red	Malfunction. Check the charging cable's connection to the vehicle's charging socket and the power source.	
	Then restart charging by following these steps:	
	1. Unplug the charging cable from the charging socket.	
	2. Wait a few seconds.	
	3. Plug the charging cable back into the charging socket.	
	4. If the problem persists, contact your Volvo retailer.	

^[1] E.g. after a door has been opened or if the charging cable handle is not locked in place.

^[2] The more slowly the light flashes, the closer the battery is to being fully charged.

^[3] The light will go out after a short time.

11.1.4. General information about charging cables

A mode 3 charging cable is used when charging at a charging station. Some charging stations have a permanent charging cable that is used instead.

(i) Note

The information in this section applies only to charging using a mode 3 charging cable or charging station with a permanent charging cable.

/ Warning

Only use the charging cable provided with your vehicle or a replacement cable purchased from a Volvo retailer.

Charging with permanent charging cable in accordance with mode 3^[1]

In certain places, the charging cable is permanently installed within a charging station connected to an electrical outlet. You must therefore use the charging station's charging cable and follow the instructions on the charging station.

Specifications, charging cable		
Enclosure class Compliance	IP 67 SAE J1772	
Ambient temperature	-32 °C to 50 °C(-25 °F till 122 °F)	

/ Warning

- Children should be supervised when in the vicinity of the charging cable when it is plugged in.
- High voltage is present in your electric meter housing and power distribution service panel. Contact with high voltage can cause death or serious personal injury.
- Do not use the charging cable if it is damaged in any way. A damaged or malfunctioning charging cable may only be repaired by a workshop an authorized Volvo workshop is recommended.
- Always position the charging cable so that it will not be driven over, stepped on, tripped over or otherwise damaged, or cause personal injury.
- Never connect adapters of any kind between the charging cable and the vehicle.

Also, refer to the manufacturer's instructions for using the charging cable and its components.

() Important

Always interrupt charging first and then disconnect the charging cable – first from the vehicle's charging socket and then from the charging station.

() Important

Wipe the charging cable with a clean cloth lightly moistened with water or a mild detergent. Do not use chemicals or solvents.

The charging cable and its components must not be rinsed or immersed in water.

^[1] European standard - EN 61851-1.

11.1.5. Residual current device in charging cable

The charging cable^[1] has a circuit breaker that helps protect against current overloads and thermal overheating.

Verning

Only charge the vehicle using approved, grounded wall outlets. If the electrical circuit or electrical socket's capacity is not known, let a licensed electrician inspect the electrical circuit's capacity. Using a charge level that exceeds the electrical circuit's or electrical outlet's capacity may start a fire or damage the electrical circuit.

/ Warning

• The charging cable's residual current breaker helps protect the vehicle's charging system but cannot ensure that an current overload will never occur.

Control module's LED^[2] indicator.

If the control module's built-in residual current device is triggered, the LED indicator will light up red. Check the wall outlet. Have the outlet checked by a licensed electrician or try using another wall outlet.

Important

- Check the capacity of the socket.
- Other electronic equipment connected on the same fuse circuit must be disconnected if the total load is exceeded.
- Do not connect the charging cable if the socket is damaged.

^[1] For charging with a mode 2 charging cable.

^[2] LED (Light Emitting Diode)

11.1.6. Charging status in the charging cable's control module

The indicator on the charging cable's control module shows the status of ongoing charging, as well as status after completed charging^[1].

Control module's LED^[2] indicator.

1 LED indicator

LED	Status	Meaning	Recommended action	
Off	Charging is not possible.	No power supply to the charging cable.	 Unplug the charging cable from the wall outlet. Plug the charging cable back into the wall outlet or use another wall outlet. If the problem persists, contact your Volvo retailer. 	
White light	Charging possible.	The charging cable is ready to be plugged into the vehicle.	 If the LED indicator is white but charging is not possible: Unplug the charging cable from the charging socket. Plug the charging cable back into the charging socket. If the indicator does not begin flashing white within about 10 seconds, first unplug the charging cable from the charging socket and then unplug it from the wall outlet. Plug the charging cable back into the wall outlet and then plug the charging socket into the vehicle. If the problem persists, contact your Volvo retailer. 	
Flashing white	Charging is in progress.	The vehicle's electronic system has initiated charging Charging is in progress.	Wait until the vehicle is fully charged.	
Steady red light	Charging is not possible.	Temporary error.	 Unplug the charging cable from the charging socket. Wait a few seconds. Plug the charging cable back into the charging socket. If the problem persists, contact your Volvo retailer. 	
Flashing red light	Charging is not possible.	Serious error.	 Unplug the charging cable from the charging socket and then from the wall outlet. Wait a few seconds. Plug the charging cable back into the wall outlet and then plug the charging socket into the vehicle. If the problem persists, contact your Volvo retailer. 	

^[1] For charging with a mode 2 charging cable.

^[2] LED (Light Emitting Diode)

11.1.7. Charging cable temperature monitoring

To help ensure the vehicle's hybrid battery is reliably charged each time^[1] it is connected, the charging cable's control module and plug have integrated temperature monitoring devices.

The temperature in both the control module and the plug is monitored.

Temperature monitoring in the control module

To help protect the vehicle's electronics, charging is stopped if the temperature in the control module becomes too high. This may occur due to e.g. high ambient temperatures or strong sunlight directly on the control module.

Monitoring in the plug

The charging current is reduced if the temperature in the plug becomes too high. If the temperature exceeds a critical limit, charging is stopped completely.

(!) Important

Avoid exposing the control unit and its plug to direct sunlight. In such cases, the overheating protection in the plug could reduce or cut off charging of the hybrid battery.

(!) Important

If charging is often inadvertently interrupted, the charging cable and the vehicle's charging system should be checked by a trained and qualified Volvo service technician. The wall outlet should also be checked by a licensed electrician.

^[1] For charging with a mode 2 charging cable.

11.1.8. Hybrid vehicle charging via wall outlet

If no other charging options are available, the vehicle can also be charged via a wall outlet.

(i) Note

The information in this section applies to charging via a wall outlet and a mode 2 charging cable.

Charging cable (mode 2)

When charging via a wall outlet, use a charging cable with a control module that can limit the amperage (mode 2).

/! Warning

Only use the charging cable provided with your vehicle or a replacement cable purchased from a Volvo retailer.

/ Warning

The charging cable and its components must not be rinsed or immersed in water.

- The charging cable must be grounded when in use. It is equipped with a cord with a grounding conductor and a grounding plug. The plug must be inserted into an appropriate outlet that is properly installed and grounded in accordance with all local codes and ordinances and is not damaged in any way.
- Children should be supervised when in the vicinity of the charging cable when it is plugged in.
- High voltage is present in your electric meter housing and power distribution service panel. Contact with high voltage can cause death or serious personal injury.
- Do not use the charging cable if it is damaged in any way. A damaged or malfunctioning charging cable may only be repaired by a workshop an authorized Volvo workshop is recommended.
- Always position the charging cable so that it will not be driven over, stepped on, tripped over or otherwise damaged, or cause personal injury.
- Disconnect the charger from the wall outlet before cleaning it.
- Never connect the charging cable to an extension cord or a multiple plug socket.
- Do not use one or more adapters between the charging cable and the electric outlet.
- Never connect adapters of any kind between the charging cable and the vehicle.
- Do not use an external timer between the charging cable and the electrical outlet.

Also, refer to the manufacturer's instructions for using the charging cable and its components.

Starting charging

Plug the charging cable into a 120/240 V outlet. Open the charger door. Note that the ignition must be switched off completely before charging. Remove the charging handle's protective cover and push the handle all the way into the vehicle's socket.

The charging cable handle will lock into place and charging will begin within 5 seconds

(i) Note

Read more about how charging is started in the Hybrid vehicle charging section.

(!) Important

If the power capacity of the wall outlet's fuse is too low, the fuse could blow while the vehicle is charging. Contact a qualified electrician for further investigation.

/! Warning

- The hybrid battery must only be charged at maximum permitted charging current or lower in accordance with applicable local and national recommendations for hybrid charging from wall outlets/plugs.
- Only charge the hybrid battery from approved, grounded wall outlets.
- Avoid visibly worn or damaged electrical outlets since they may lead to fire damage and/or personal injury if used.

(!) Important

Never connect the charging cable if there is a risk of a thunderstorm or there is lightning.

Stopping charging

To stop charging of the hybrid battery, unlock the vehicle, unplug the charging cable from the vehicle's charging socket and then unplug the cable from the 120/240 V outlet.

(i) Note

Read more about how charging is stopped in the Stopping hybrid vehicle charging section.

(!) Important

Before the charging cable is removed from the vehicle's charging socket, the vehicle must be unlocked using the unlock button on the key. This must be done even if the vehicle's doors are already unlocked. If the vehicle is not unlocked using the unlock button, the charging cable or system may be damaged.

(!) Important

- Never unplug the charging cable from the wall outlet while charging is in progress the wall outlet could be damaged in such circumstances.
- Always unlock the vehicle so that charging is cut off before unplugging the charging cable from the wall outlet.
- Note that the charging cable must be disconnected from the vehicle's charging socket before it is disconnected from the wall outlet, partly to prevent damage to the system and party to prevent unintentional interruption of charging.

Fuse

Charging a hybrid battery via a wall outlet corresponds to a high load on the fuse.

(!) Important

Make sure that the fuse to the wall outlet can handle the current specified for the charging cable.

There are normally several 120/240 V power consumers in one fuse circuit, which means that more than one power consumer (e.g. lighting, vacuum cleaner, electric drill, etc.) may use the same fuse.

(!) Important

Make sure that the 120/240 V outlet has sufficient amperage for charging electric vehicles. If you are uncertain of the capacity, have the outlet checked by a licensed electrician.

11.1.9. Hybrid vehicle charging

You can charge the vehicle at a home charging station or a public charging station^[1].

Starting charging

- 1 Remove the charging cable from the charging station's storage socket or take out your charging cable. Note that the ignition must be switched off completely before charging.
- 2 Plug the charging cable into the charging station. If the charging station has a permanent charging cable, go to step 3.

Press the rear edge of the charger door to open the charging $socket^{[2]}$.

Remove the charging handle's protective cover and push the charging handle all the way into the vehicle's socket.

(! Important

To prevent paintwork damage, e.g. in strong winds, position the protective cover of the charging handle so that it does not touch the vehicle.

- **5** The charging cable handle will lock into place and charging will begin within 5 seconds.
- When charging starts, the green LED light in the charging socket will begin to flash. The approximate remaining charging time or the charging status will be displayed in the instrument panel.

During charging, condensation from the air conditioning may form under the vehicle. This is normal and is caused by the hybrid battery cooling.

/ Warning

- Children should be supervised when in the vicinity of the charging cable when it is plugged in.
- High voltage is present in your electric meter housing and power distribution service panel. Contact with high voltage can cause death or serious personal injury.
- Do not use the charging cable if it is damaged in any way. A damaged or malfunctioning charging cable may only be repaired by a workshop an authorized Volvo workshop is recommended.
- Always position the charging cable so that it will not be driven over, stepped on, tripped over or otherwise damaged, or cause personal injury.
- Never connect adapters of any kind between the charging cable and the vehicle.

Also, refer to the manufacturer's instructions for using the charging cable and its components.

(!) Important

Do not wash the vehicle while the charging cable is plugged in or the charging door is open.

^[1] Applies to charging using a mode-3 charging cable or charging station with a permanent charging cable.

^[2] The illustration is generic - details may vary according to model.

11.1.10. Stopping hybrid vehicle charging

To stop charging^[1], unlock the vehicle, unplug the charging cable from the vehicle's charging socket and then unplug the cable from the charging station.

1 Use the key^[2] to unlock the vehicle. Charging stops.

() Important

Always interrupt charging first and then disconnect the charging cable – first from the vehicle's charging socket and then from the charging station.

Press the release button on the charging cable's handle. The handle will be released/unlocked. Unplug the cable from the vehicle's charging socket and close the charger door.

3 Remove the charging cable from the charging station, or plug the permanent charging cable into the charging station's storage socket.

(!) Important

Always unlock the vehicle so that charging is stopped before unplugging the charging cable. Note that the charging cable must be disconnected from the vehicle's charging socket before it is disconnected from the charging station, partly to prevent damage to the system and party to prevent unintentional interruption of charging.

Charging cable automatically locks

If the charging cable is not removed from the charging socket, it will automatically lock back into place a short time after unlocking. The charging cable can be removed again if the vehicle is unlocked using the key. For vehicles with keyless locking and unlocking* it is possible to lock and unlock with the handle again.

- ^[1] Applies to charging using a mode-3 charging cable or charging station with a permanent charging cable.
- ^[2] Unlocking to stop charging must be done regardless of whether the vehicle is locked or unlocked
- * Option/accessory.

11.1.11. Charging time

The following charging times are approximate and apply when charging is not affected by current being drawn from the climate system or any other function. If charging seems to be taking more time than shown in the table, this should be investigated.

Charging time (single-phase charging)

Charging times for charging with 200-240 V			
Amperage (A) ^[1]	Charging output (kW) ^[2]	Charging time (hours)	
6	1,3	8	
10	2.2	5	
16	3.6	3	

Charging times for charging with 100-120 V			
Amperage (A) ^[1]	Charging time (hours)		
6	0.7	17	
10	1.1	10	
16	1.8	6	

(i) Note

- Charging output and charging time may vary depending on voltage level and other loads connected on the same circuit.
- The maximum charging output for the hybrid is 3.6 kW, even when using a charging station with a higher output than 3.6 kW.

(i) Note

In extremely cold or hot weather, part of the charging current is used to heat/cool the hybrid battery, resulting in a longer charging time.

^[1] Maximum charging current may vary from market to market.

^[2] The highest charging output that the vehicle can achieve is 3.6 kW.

11.2. Hybrid battery gauge

The hybrid battery gauge shows how much current is left in the hybrid battery.

The current in the hybrid battery is used to power the electric motor, but can also be used to heat or cool the vehicle. The trip computer calculates an approximate driving distance with the remaining current in the hybrid battery.

Symbols in the hybrid battery gauge

The **f** symbol in the hybrid battery gauge indicates that the Hold function is activated. The **f** symbol indicates that the Charge function is activated.

11.3. Hybrid gauge
In Hybrid and Pure drive modes, the instrument panel will display a hybrid gauge, which can help the driver achieve optimal driving economy.

The hybrid gauge shows the ratio between the electric motor's current power consumption and the remaining available power. This information is shown in various ways.

Symbols in the hybrid gauge

Indicates the current available power from the electric motor. A solid symbol indicates that the electric motor is being used.

A hollow symbol indicates that the electric motor is not being used.

Indicates the power level when the internal combustion engine starts. A solid symbol indicates that the internal combustion engine is being used.

Indicates the power level when the internal combustion engine will start. A hollow symbol indicates that the internal combustion engine is not being used.

Indicates that the hybrid battery is being charged e.g. by lightly pressing the brake pedal.

Driver-requested power

The hybrid gauge displays the amount of power requested (utilized) by the driver through pressure on the accelerator pedal. The higher the reading on the scale, the more power utilized in the current gear. The mark between the lightning symbol and the drop symbol indicates the point at which the combustion engine will start.

The vehicle has been started, but is stationary and no power is being requested.

The electric motor cannot supply the requested power and the internal combustion engine will start.

The vehicle is generating current to recharge the battery, e.g. during light braking or engine braking on a downslope.

11.4. Drive systems

The vehicle combines a gasoline engine with an electric motor.

Two drive systems

Depending on the selected drive mode and power available in the electric motor, the drive systems can either be used separately or in tandem.

The electric motor gets its energy from a hybrid battery located under the tunnel console. The hybrid can be charged from a wall outlet or in a special charging station.

Both the combustion engine and the electric motor can generate power directly to the wheels. An advanced control system coordinates both the drive systems to help optimize driving economy.

- **1** Hybrid battery The hybrid battery's function is to store electrical current. This current is provided by plugging the charging cable into an electrical outlet or through regenerative braking. This provides current to power the electric motor and to temporarily power the electrical air conditioning to precondition the passenger compartment.
- 2 Combustion engine The combustion engine starts when the charge level in the hybrid battery is too low to provide the power output requested by the driver.
- 🕄 Super capacitor Supplies current to start the vehicle, which saves current in the regular 12 V battery.
- 4 Electric motor Powers the vehicle using electricity. Can provide extra torque and power during acceleration. Regenerates braking energy into electrical current.

11.5. Hold and Charge

In certain situations, it can be useful to control the hybrid battery's charge level while driving. This is possible with the **Hold** and **Charge** functions.

Hold and Charge are available in all drive modes. The functions will switch off if Pure drive mode is activated.

Activating Hold and Charge

The functions can be activated in the center display's Function view.

Hold

Battery level sustained for later use.

This function retains the charge in the hybrid battery for the electric motor and saves available electrical current for use at a later time, such as when driving in an urban area.

The vehicle will function as in normal hybrid driving with a discharged battery - in addition to reusing energy from e.g. regenerative braking, the combustion engine will be used more frequently to maintain the charge in the battery.

(i) Note

The battery level can be affected when using Hold if, for example, the vehicle is heavily loaded, has equipment connected to the towbar or drives up a long hill.

Charge

1

Engine charges hybrid battery.

This function charges the hybrid battery with the help of the combustion engine for increased use of the electric motor at a later time.

Symbols in the instrument panel

The fi symbol is displayed in the hybrid battery gauge when Hold is activated.

The **5** symbol is displayed in the hybrid battery gauge when Charge is activated.

11.6. Drive modes

Drive modes affect the vehicle's driving characteristics in different ways to enhance and simplify the driving experience in certain types of situations.

Drive modes enable easy access to the vehicle's many functions and settings in different driving situations. Each drive mode is adapted to help optimize driving characteristics.

- Steering
- Engine/transmission
- Brakes
- Shock absorbers
- Instrument panel
- Climate control settings

Select the drive mode that is adapted to the current driving conditions. Keep in mind that not all drive modes are available in all situations.

Available drive modes

V Warning

Please be aware that there is no sound from the engine when the vehicle is being powered by the electric motor and it may be difficult to detect by children, pedestrians, cyclists and animals. This is particularly true at low speeds e.g. in parking lots.

✓ Warning

Do not leave the vehicle in an unventilated area with a drive mode activated and the combustion engine switched off. The engine will start automatically if the charge level in the hybrid battery is low and the resulting exhaust gases can be very harmful to people and animals.

Hybrid

This is the default mode in which the electric motor and combustion engine work together.

The vehicle starts in **Hybrid** mode. The control system uses both the electric motor and the gasoline engine – separately or in tandem – and adapts utilization with regard to performance, fuel consumption and comfort. Driving capacity on the electric motor alone is determined by factors such as the hybrid battery's charge level, the need for heat or cooling in the passenger compartment, etc.

If there is sufficient charge in the battery, it is possible to drive solely on electric power. When the accelerator pedal is pressed, only the electric motor will be activated until the battery reaches a certain charge level. Above this level, the current in the battery cannot supply the power requested by the accelerator pedal and the combustion engine will start.

When the hybrid battery's charge level is low, the combustion engine will start more frequently to save the remaining current in the battery. Charge the hybrid battery from a 120-240 volt outlet using a charging cable, or activate Charge in Function view to reset the option of only using the electric motor.

This drive mode is designed for low energy consumption with a mix between the electric motor and gasoline engine, without compromising on climate comfort or driving experience. When faster acceleration is requested by the driver, the electric driveline will be utilized to help provide maximum additional power.

Information in the instrument panel

When driving in Hybrid mode, a hybrid gauge will be displayed in the instrument panel. The gauge will indicate the amount of electrical current required when the driver depresses the accelerator pedal. The marker between the lightning and the drop shows how much current is available.

The instrument panel gauge when both the electric motor and the combustion engine are being used.

The instrument panel also shows how much current is being restored to the battery (regenerated) during light braking.

Pure

Uses the electric motor only, with the lowest possible energy consumption and carbon dioxide emissions.

This drive mode prioritizes the use of the hybrid battery. Certain climate system functions are reduced to provide the longest distance using only electricity.

Pure mode is available as long as the hybrid battery has a high enough charge level and available power, which can be affected by temperature. When the gasoline engine starts, the vehicle automatically switches to Hybrid mode until it is possible for the driver to select Pure mode again.

The gasoline engine starts:

- if the battery's charge level is too low
- if the driver presses the accelerator pedal all the way down.

Pure mode is not available:

if the battery's charge level is too low

- if the vehicle's speed exceeds 140 km/h (87 mph) (does not apply on downhill gradients, etc.)
- if factors such as cold weather affect the system or components.

(i) Note

The combustion engine may start temporarily in certain situations when **Pure** drive mode is used. This is to provide the wheels with the desired torque in driving situations that require higher loads, such as when towing a trailer or driving up a hill.

This drive mode is adapted for the longest possible driving distance with electric propulsion and is primarily intended for use in city driving. **Pure** helps provide the lowest possible consumption even when the hybrid battery is fully discharged.

ECO Climate

In Pure mode, ECO climate is automatically activated in the passenger compartment to help reduce energy consumption.

(i) Note

When the **Pure** drive mode is activated, settings for certain climate system and electricity consuming functions are reduced. Some of these settings can be reset manually, but full functionality will only be restored by leaving **Pure** mode or adapting the **Individual** drive mode to full climate system functionality.

If condensation forms on the windows, tap the max defroster button, which will function normally.

Power

• The vehicle gets sportier driving characteristics and a faster acceleration response.

This drive mode adapts the combined power from the gasoline engine and the electric motor. Gear shifting will be faster and more distinct and the transmission will prioritize gears with a higher traction force. Steering response is faster and suspension is stiffer.

This drive mode is adapted for optimal performance and response during acceleration. It changes the throttle response, gear shifting program and turbo boost system. Chassis settings and steering and brake response are also optimized. The **Power** drive mode is always available regardless of the hybrid battery's charge status.

Power mode is also available in a Polestar Engineered* version.

Individual

Customizes drive mode to personal preferences.

Select one of the drive modes as a basis and adjust the settings to achieve your preferred driving characteristics. These settings will be stored in your driver profile.

Individual drive mode is only available if it has been activated in the center display.

Settings view^[1] for Individual drive mode.

1 Tap Settings in the Top view.

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note. 548 / 1010

- 2 Tap My Car \rightarrow Individual Drive Mode and select Individual Drive Mode.
- 3 Under Presets, select one of the following drive modes as a basis: Pure, Hybrid, Power or Polestar Engineered*. The following settings can be modified:
 - Driver Display
 - Steering Force
 - Powertrain Characteristics
 - Brake Characteristics
 - Suspension Control
 - ECO Climate

Using the electric or combustion engine

An advanced control system determines the distance that the vehicle can be driven on the combustion engine, electric motor, or both at the same time.

Its primary function is to use the motor/engine and the current available in the hybrid battery as efficiently as possible based on the characteristics of the various drive modes and the power output requested by the driver by pressing the accelerator pedal.

In certain cases, temporary limitations in the system or mandatory functions to help maintain a low overall emissions level may result in greater use of the combustion engine.

* Option/accessory.

^[1] The illustration is generic - details may vary according to vehicle model.

11.7. General information about electric vehicles

The vehicle is equipped with a rechargeable hybrid battery^[1]. The electric motor powers the vehicle primarily at low speeds; the gasoline engine is used at higher speeds or during more active driving.

Charging the hybrid battery

The hybrid battery is recharged using the charging cable. It can also be recharged during light braking and through engine braking in gear position B. The combustion engine can also help recharge the hybrid battery. The vehicle's start battery is charged when the hybrid battery is charged.

The hybrid battery's charging time depends on the amperage used.

While driving

The instrument panel shows charging information, selected drive mode, distance to discharged battery, and the hybrid battery's charge level.

Different drive modes can be selected while driving, e.g. electric power only or, if more power is needed, a combination of electric and gasoline power. The vehicle calculates a combination of driveability, driving experience, environmental impact and fuel economy for the selected drive mode.

Effect of temperature

The hybrid battery with associated electrical drive system as well as gasoline engine and its drive system, work better when they are at the correct operating temperature.

If the hybrid battery's temperature is below -10 °C (14 °F) or above 40 °C (104 °F), some of the vehicle's functions may be reduced or not available at all.

The electric motor cannot be used if the battery's temperature is too low or too high.

Important

(i) Note

The capacity of the hybrid battery diminishes somewhat with age and use, which could result in increased use of the gasoline engine and consequently, slightly higher fuel consumption.

/ Warning

California Proposition 65

Operating, servicing and maintaining a passenger vehicle can expose you to chemicals including engine exhaust, carbon monoxide, phthalates, and lead, which are known to the State of California to cause cancer and birth defects or other reproductive harm. To minimize exposure, avoid breathing exhaust, do not idle the engine except as necessary, service your vehicle in a well ventilated area and wear gloves or wash your hands frequently when servicing your vehicle. For more information go to www.P65Warnings.ca.gov/passenger-vehicle [https://www.p65warnings.ca.gov/products/passenger-vehicle [https://www.p65warnings.ca.gov/products/passenger-vehicle [https://www.p65warnings.ca.gov/products/passenger-vehicle].

/ Warning

Charging the vehicle can affect the function of an implanted pacemaker or other medical equipment. People with an implanted pacemaker are recommended to consult a doctor before starting charging.

/ Warning

If the hybrid battery needs to be replaced, this may only be done by a Volvo retailer or authorized Volvo workshop.

Exterior engine noise

(i) Note

Because there is no sound from the engine when only the electric motor is running, the vehicle is equipped with artificial exterior background noise at low speeds and when reversing. This warning sound is intended to help warn children, pedestrians, cyclists, animals, etc. outside the vehicle of the vehicle's approach.

High-voltage electrical current

/! Warning

The hybrid electrical system in your vehicle uses high voltage electrical current. Any damage to this system or to the hybrid battery may result in the danger of overheating, fire, or serious injury. If the vehicle is involved in a collision or subjected to flooding, fire, etc., have it inspected by a trained and qualified Volvo service technician. Prior to this inspection, the vehicle should be parked outdoors at a safe distance from any building or potentially flammable materials.

/ Warning

A number of electrical components in the vehicle use high-voltage current and can be extremely dangerous if handled incorrectly. These components and any orange wiring in the vehicle may only be handled by trained and qualified Volvo service technicians.

Do not touch anything that is not clearly described in this Owner's Manual.

^[1] Lithium-ion.

11.8. Hybrid symbols and messages in the instrument panel

A number of symbols and messages relating to hybrid operation may be displayed in the instrument panel. They may also appear in combination with general indicator and warning symbols and disappear when the necessary action has been taken.

Symbol	Message	Meaning
	12 V Battery Charging fault, service ur- gent. Drive to workshop	Fault in 12 V battery. Contact a workshop ^[1] to have the battery checked as soon as possible.
	12 V Battery Charging fault Stop safely	Fault in 12 V battery. Stop the vehicle as soon as possible and contact a workshop ^[1] to have the battery checked.
	12 V Battery Fuse failure Service required	Fault in 12 V battery. Contact a workshop ^[1] to have the system checked as soon as possible.
	HV battery Overheated, stop safely	The hybrid battery's temperature seems to be rising at an abnormal rate. Stop the vehicle and turn off the engine. Wait at least 5 minutes before driving. Call a workshop ^[1] or inspect the vehicle to make sure everything seems normal before continuing to drive.
-	Reduced performance Max vehicle speed limited	The hybrid battery's charge level is too low for driving at high speeds. Charge the battery as soon as possible.
	Propulsion system Harsh behavior at low speed, vehicle ok to use	The hybrid system is not functioning properly. Contact a workshop ^[1] to have the system checked as soon as possible.
	Hybrid system failure Service required	The hybrid system is not functioning. Contact a workshop ^[1] to have the system checked as soon as possible.
4 0	Charge cable Remove before start	Displayed when the driver attempts to start the vehicle with the charging cable still connected. Remove the charging cable and close the charger cover.

^[1] An authorized Volvo workshop is recommended.

11.9. Long-term storage of vehicles with hybrid batteries

To help minimize the risk of damage to the hybrid battery during long-term storage (longer than 1 month), it is recommended that the charge level be kept at about 25%. Regularly check the charge level in the instrument panel.

Preparing for long-term storage

The recommended charge level for long-term storage is about 25%.

- If the charge level is high drive the vehicle until it reaches the recommended level.
- If the charge level is low charge the vehicle to the recommended level.

During long-term storage

Regularly check the charge level in the instrument panel.

Charge the vehicle if the charge level has dropped significantly or if it hasn't been charged in over 6 months. This compensates for the battery's natural self-discharge.

(i) Note

Store the vehicle in a cool place and avoid extreme temperatures during long-term storage to minimize the risk of damage to the battery. Choose a storage area indoors or in shade, depending on where the temperature is lowest, especially in warm climates.

11.10. Range in electric mode

A number of factors can affect vehicle range. The ability to achieve a long driving range varies according to the outside conditions and to how the vehicle is driven.

The certified value for the vehicle's range should not be considered an expected driving range. The certified value is obtained during special test cycles and is primarily intended to be used for comparisons between different vehicles.

553 / 1010

Range in the instrument panel

When the vehicle leaves the factory, or after a factory reset, range is based on the certified value.

Once the vehicle has been driven for a while, range is instead based on historical driving patterns. The amount of history used depends on the battery's charge level. The lower the charge level of the hybrid battery, the more quickly the range adapts to changed driving patterns.

Factors affecting driving range

There are a number of other factors in addition to historical trip data that affect range. The longest range is achieved under very favorable conditions when all factors positively influence range.

Factors affecting range include:

- speed
- climate control settings
- topography
- preconditioning
- tires and tire pressure
- the current traffic situation
- temperature and weather
- road conditions.

Range based on speed and ambient temperature

1 20 °C (68 °F) ambient temperature and passenger compartment climate control off.

20 °C (68 °F) ambient temperature and passenger compartment climate control on.

3 35 °C (95 °F) ambient temperature and passenger compartment climate control on.

4 -10 °C (14 °F) ambient temperature and passenger compartment climate control on.

The graph shows the approximate relationship between constant speed and driving range. Driving at a lower constant speed helps increase the electric motor's driving range.

Higher ambient temperature and deactivated climate system are also more favorable for range.

11.11. Economical driving

To achieve the longest possible driving range, the driver should plan the trip and adapt driving style and speed to the current situation.

Before driving

- Whenever possible, precondition the vehicle before driving by connecting the charging cable to an electrical outlet.
- If preconditioning is not possible when it is cold outside, use seat and steering wheel heating first. Avoid heating the entire passenger compartment to reduce the amount of current being taken from the hybrid battery.
- The type of tires and inflation pressure used could affect energy consumption consult an authorized Volvo retailer for advice on suitable tires.
- Remove unnecessary items from the vehicle the heavier the load, the higher the fuel consumption.

While driving

- Activate Pure drive mode.
- Activate the Hold function at high speeds when traveling farther than is possible using the hybrid battery's capacity.
- Whenever possible, avoid using the Charge function to charge the hybrid battery.
- Maintain a steady speed and a generous following distance to traffic ahead to minimize braking.

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note. 555 / 1010

- When braking, the hybrid battery is charged by braking lightly using the brake pedal.
- Higher speeds increase energy consumption because air resistance increases with speed.
- In a cold climate, reduce heating of the windshield/rear window, mirrors, seats and the steering wheel. Ð
- Avoid driving with the windows open. Ð
- Do not use the accelerator pedal to keep the vehicle stationary on an uphill gradient. Instead, activate the auto-hold brake function at a standstill.
- If possible, turn off the climate system when driving shorter distances after preconditioning.

After driving

If possible, park in a climate-controlled garage with vehicle charging outlets or stations.

11.12. Recycling of batteries

Batteries must be recycled in an environmentally sound manner at the end of their service life.

Consult a workshop if you are uncertain of how to dispose of this type of waste - an authorized Volvo workshop is recommended. Only authorized workshop personnel may handle hybrid batteries.

11.13. Hybrid battery

The hybrid battery powers the vehicle's electric motor and is charged via the vehicle's charging socket.

The vehicle cannot be started if the hybrid battery is discharged.

If both the starter battery and the hybrid battery are discharged, both batteries must be charged. In this situation, it is not possible to first charge only the hybrid battery. The starter battery must have a certain charge level in order for the hybrid battery to be charged.

Warning

Hybrid battery replacement may only be performed by a workshop – an authorized Volvo workshop is recommended.

Hybrid battery service life and capacity

The capacity of the hybrid battery decreases with age and use, which could result in increased use of the combustion engine and thereby higher fuel consumption and reduced electric motor range.

556 / 1010

Coolant

The hybrid battery's cooling system has its own expansion tank.

(!) Important

Filling the hybrid battery coolant should only be performed by a workshop – an authorized Volvo workshop is recommended.

Specifications for hybrid battery

Type: Lithium-ion

Power reserve: 10.7 kWh

12. Starting and driving

12.1. Starting and switching off vehicle

12.1.1. Electronic immobilizer

The electronic immobilizer is a start inhibitor that helps prevent the vehicle from being started without the correct key.

The following instrument panel error messages are related to the electronic immobilizer:

Symbol	Message	Meaning
	Vehicle key not found	Key not recognized during start. Place the key on the key symbol in the storage compartment in the center console and try to start the vehicle again.

Remote immobilizer with tracking system^[1]

The vehicle is equipped with a system that makes it possible to track and locate the vehicle and to remotely activate the immobilizer to prevent the vehicle from being started. Contact your nearest Volvo retailer for more information and assistance activating the system.

The following instrument panel error messages are related to the remote immobilizer with tracking system:

Symbol	Message	Meaning
FÈ	Remotely immobilised Vehicle not possible to start	The remote immobilizer with tracking system is activated. The vehicle cannot be started. Contact Volvo On Call service center.

^[1] Only certain markets and in combination with Volvo On Call.

12.1.2. Starting the vehicle

The vehicle can be started using the start button next to the steering wheel when the key is in the passenger compartment.

Location of the start button.

/ Warning

Before starting:

- Buckle your seat belt.
- Adjust the seat, steering wheel and mirrors.
- Make sure you can fully depress the brake pedal.

The key is not physically used to start the ignition because the vehicle is equipped with the keyless Passive Start system.

To start the vehicle:

1

() Important

The vehicle cannot be started if the charging cable is still plugged in. Make sure that the charging cable is removed and the charger cover is closed before starting the vehicle.

The key must be inside the vehicle. For vehicles with Passive Start, the key must be in the front section of the passenger compartment. With the optional keyless locking/unlocking function*, the key can be anywhere in the vehicle.

- **2** Press and hold down the brake pedal^[1] as far as possible.
- **3** Press the start button.

- Never use more than one inlay mat at a time on the driver's floor. If any other type of floor mat is used, remove the original mat from the driver's seat floor before driving. All types of mats must be securely anchored in the attachment points in the floor. Make sure the floor mat does not impede the movement of the brake pedal or accelerator pedal in any way, as this could be a serious safety hazard.
- Volvo's floor mats are specially manufactured for your vehicle. They must be properly secured in the attachment points in the floor to help ensure they cannot slide and become trapped under the pedals.

The starter motor will crank until the engine starts or until overheating protection is triggered^[2].

During normal start conditions, the vehicle's electric motor will be prioritized and the gasoline engine will remain off. This means that once the start button has been pressed, the electric motor has "started" and the vehicle is ready to be driven. The warning and information symbols in the instrument panel will go out and the selected theme will be displayed to indicate that the electric motor is activated.

In some situations such as in cold weather or if the hybrid battery's charge level is too low the gasoline engine will start instead.

Error messages

If the Vehicle key not found message is shown in the instrument panel at start, place the key at the backup reader and then make a new start attempt.

Location of the backup reader.

(i) Note

When the key is placed in the backup reader, make sure that no other keys, metal objects or electronic devices (e.g. cellular phones, tablets, laptops or chargers) are in the backup reader. Multiple keys close to each other in the backup reader can disrupt their functionality.

If **Vehicle start System check**, wait is displayed in the instrument panel while attempting to start the vehicle, wait until the message disappears and try again to start the vehicle.

(!) Important

If the engine has not responded after 3 attempts – wait for 3 minutes before starting a new attempt. Starting capability increases if the starter battery is given time to recover.

(i) Note

The vehicle cannot be started if the hybrid battery is discharged.

/ Warning

Never remove the key from the vehicle while driving.

/ Warning

- Always remove the key from the passenger compartment when you leave the vehicle and make sure the ignition is in mode **0**.
- Always put the gear selector in P and apply the parking brake before leaving the vehicle. Never leave the vehicle unsupervised while the engine is running.
- Always open the garage door fully and make sure that ventilation is very good before starting the engine in a garage. The exhaust fumes produced by the vehicle contain carbon monoxide, which is invisible and odorless but very toxic.

(!) Important

- When starting in cold weather, the automatic transmission may shift up at slightly higher engine speeds than normal until the automatic transmission fluid reaches normal operating temperature.
- Do not race a cold engine immediately after starting. This could prevent fluids from properly lubricating vital components in the engine before it has reached the proper operating temperature.
- The engine should be idling when the gear selector is moved. Never accelerate until the gear is fully engaged. Accelerating rapidly before a gear is properly engaged could lead to harder wear of components.
- To help prevent the transmission oil from overheating, select P or N when idling at a standstill for prolonged periods of time.

(i) Note

With a cold start, idling speed may be considerably higher than normal for certain engine types. This is done to get the emissions system up to normal operating temperature as quickly as possible, which minimizes exhaust emissions and protects the environment.

* Option/accessory.

^[1] If the vehicle is moving, it is only necessary to press the button to start the engine.

12.1.3. Jump starting using another battery

If the vehicle's start battery (12 V) is discharged, current from another battery can be used to start the vehicle's electrical system.

If the 12 V battery (start battery) is discharged, the vehicle's electrical system can be jump-started from another vehicle's battery using jumper cables. If the hybrid battery is also discharged, it must be charged using the charging cable after the electrical system is started so that the engine can be started.

Jumper cable charging points. There are two connecting points under the cover. Only use the one closest to the passenger compartment.

(!) Important

The charging points of the vehicle are only intended for jump-starting the vehicle in question. Do not use them to start other vehicles - the charging circuit's fuse could be overloaded and stop working.

If a fuse has become overloaded, 12 V Battery Fuse failure Service required will be displayed in the instrument panel. Volvo recommends contacting an authorized Volvo workshop.

To avoid short circuits or other damage, the following steps are recommended when jump starting the battery:

- Put the ignition in mode 0. 1
- Make sure that the assisting battery has a voltage of 12 V. 2
- 3 If the battery is in another vehicle, turn off that vehicle's engine and make sure that the vehicles are not touching each other.
- Clamp one end of the red jumper cable to the assisting battery's positive terminal (1). 4

(!) Important

Connect the jumper cable carefully to prevent short circuit and contact with other components in the engine compartment.

5 Fold back the cover over your vehicle's positive charging point (2).

There are two connecting points under the cover. Only use the connecting point closest to the passenger compartment.

- 6 Clamp the other end of the red jumper cable to your vehicle's positive charging point (2).
- 7 Clamp one end of the black jumper cable to the assisting battery's negative terminal (3).
- 8 Clamp the other end of the black jumper cable to your vehicle's negative charging point (4).
- 9 Make sure the jumper cables are securely attached to help prevent sparks while jump starting.
- **10** Start the engine of the assisting vehicle and let it run for a few minutes at a higher idling speed than normal, about 1500 rpm.
- **11** To activate the vehicle's electrical system, press and hold the start button for at least 5 seconds without pressing the brake.

(i) Note

During normal start conditions, the vehicle's electric motor will be prioritized and the gasoline engine will remain off. This means that after the start button has been pushed in, the electric motor has "started" and the vehicle is ready to be driven. Start of the electric motor is indicated by the indicator lights on the instrument panel going out and its preselected theme illuminating.

(!) Important

Do not touch the connections between the cable and the vehicle during the start attempt. Risk of sparking.

12 Wait at least two minutes to charge the start battery and then try to start the engine again.

- 13 If the engine still doesn't start, repeat steps 11 and 12.
- 14 Remove the jumper cables in the reverse order first the black cables and then the red cables.

Make sure that none of the clamps of the black jumper cables come into contact with the vehicle's positive charging point, the assisting vehicle's battery's positive terminal, or either of the red jumper cable's connected clamps.

/!\ Warning

PROPOSITION 65 WARNING! Battery posts, terminals, and related accessories contain lead and lead compounds, chemicals known to the state of California to cause cancer and reproductive harm. Wash hands after handling.

- Batteries generate hydrogen gas, which is flammable and explosive.
- Do not connect the jumper cable to any part of the fuel system or to any moving parts. Avoid touching hot manifolds.
- Battery fluid contains sulfuric acid. Do not allow battery fluid to contact eyes, skin, fabrics or painted surfaces.
- If contact occurs, flush the affected area immediately with water. Obtain medical help immediately if eyes are affected.
- Never expose the battery to open flame or electric spark. Do not smoke near the battery. Failure to follow the instructions for jump starting can lead to injury.

(i) Note

The vehicle cannot be started if the hybrid battery is discharged.

12.1.4. Switching off the vehicle

The vehicle is turned off using the start button next to the steering wheel.

Location of the start button.

To switch off the vehicle:

1 Press the start button – the vehicle is turned off.

If the vehicle rolls:

1 Press and hold the start button until the vehicle is turned off.

12.1.5. Ignition modes

The vehicle's ignition can be put in various modes (levels) to make different functions available.

To enable the use of a limited number of functions when the engine is not running, the ignition can be put in one of three different levels: **0**, **I** and **II**. These levels are referred to as "ignition modes" in the Owner's Manual.

The following table shows which functions are available in each ignition mode:

Mode Functions 0 • The odometer, clock and temperature gauge are illuminated^[1]. • The power* seats can be adjusted. • The center display is activated and can be used^[1]. • The infotainment system can be used^[1]. • The infotainment system can be used^[1]. In this mode, the functions are available for a limited time and then switch off automatically. • The infotainment system can be used^[1].

Mode	Fu	Inctions	
I	•	The panoramic roof, power windows, 12-volt electrical socket in the passenger compartment, Bluetooth, navigation, phone, blower and windshield wipers can be used.	
	 The power seats can be adjusted. The 12-volt electrical socket* in the cargo compartment can be used. 		
	•	The infotainment system starts up automatically if it was on when the ignition was switched off.	
	Electrical current will be taken from the battery in this ignition mode.		
	•	The headlights illuminate.	
	•	Warning/indicator lights illuminate for 5 seconds.	
	•	A number of other systems are activated. However, seat and rear window heating can only be activated when the engine is running.	
	Tł	is ignition mode uses a lot of current from the battery and should be avoided whenever possible!	

^[1] Also activated when the door is opened.

* Option/accessory.

12.1.6. Selecting ignition mode

The vehicle's ignition can be put in various modes (levels) to make different functions available.

Selecting an ignition mode

Location of the start button.

• Ignition mode 0 – Unlock the vehicle and keep the key in the passenger compartment.

To set level I or II without engine start – do not depress the brake pedal when selecting this ignition mode.

- Ignition mode I Press the start button and release.
- Ignition mode II Press the button and hold it in for approx. 5 seconds. Release the button.

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note. 566 / 1010 Back to ignition mode 0 – To return to ignition mode 0 from modes I and II, press the start button.

12.2. Transmission

12.2.1. The kickdown function

Kickdown can be used when maximum acceleration is needed e.g. when passing.

When the accelerator pedal is depressed all the way to the floor (past the normal full accelerator position), the transmission will automatically engage kickdown, i.e. immediately shift down to a lower gear.

If the accelerator pedal is released from the kickdown position, the transmission will automatically shift up again.

Safety function

The transmission control module is equipped with a downshift protection feature to help prevent the engine from overheating.

In some conditions, the transmission will prevent downshifting/kickdown if this would lead to such high engine speed (rpm) that the engine could be damaged. If the driver still attempts downshifting or kickdown at a high rpm, nothing will happen and the original gear will remain selected.

With kickdown, the vehicle can downshift one or more steps at a time depending on the engine speed. The vehicle upshifts when the engine reaches its maximum rpm to prevent engine damage.

12.2.2. The Launch function*

Launch can be used to provide maximum acceleration from a standstill. The function is available for the drive modes: Hybrid, Constant AWD, Power and Individual.

Activating Launch

Make sure that the vehicle is stationary and that the wheels are pointing straight ahead.

- Put the gear selector in D position. 1
- Depress the brake pedal fully. 2
- Then fully depress the accelerator pedal. 3
- Release the brake pedal within 2 seconds. 4

(i) Note

If the Launch function does not work, wait a few minutes to let the driveline reach working temperature before trying again.

(!) Important

The driveline is exposed to wear when using Launch and the function is therefore only available a limited number of times.

* Option/accessory.

12.2.3. Transmission

The transmission is part of the vehicle's driveline (power transmission) between the engine and the drive wheels. The function of the transmission is to change gears depending on speed and power needs.

The vehicle has a seven-speed dual-clutch automatic transmission with an integrated electric motor and brake energy regeneration. The number of gears allows the engine's torque and power band to be effectively utilized.

With the automatic transmission, it is also possible to shift manually. The selected gear selector position will be displayed in the instrument panel.

12.2.4. Automatic transmission

Gear position is selected automatically to make driving as energy efficient as possible. The transmission also has a manual mode.

Overview of gear selector and gear shift pattern in the instrument panel.

P, R, N, D or B.

12.2.5. Shifting gears with automatic transmission

Change gear position by pushing the spring-loaded gear selector forward or rearward, or to the side for manual shifting.

Selecting gears

Gear selector and gear selector positions overview.

Gear selector positions

Parking – P

Gear selector and P position overview.

Parking is activated using the \mbox{P} button located next to the gear selector.

In the ${\sf P}$ position, the transmission is mechanically locked.

Select P position when the vehicle is parked. The vehicle can be started when it is in P position. The vehicle must be stationary when P is selected.

When parking – apply the parking brake before shifting to position P.

/ Warning

Always apply the parking brake when parking on an incline. Selecting a gear or putting the automatic transmission in **P** may not be sufficient to keep the vehicle stationary in all situations.

(i) Note

The gear selector must be in position **P** in order to lock the vehicle and set the alarm.

Help functions

The system will switch to the P position automatically:

- if the ignition is switched off while D or R is selected.
- if the driver unbuckles the seat belt and opens the driver's door while the vehicle is running with a gear other than P selected.

To park a vehicle with an unbuckled seat belt and open door – end P mode by shifting to R or D again.

If the vehicle is switched off in gear position N, it will not automatically switch to the P position. This makes it possible to wash the vehicle in an automatic car wash.

Reverse – R

Select ${\sf R}$ when backing up. The vehicle must be stationary when ${\sf R}$ is selected.

Neutral – N

In N position, the vehicle can roll freely. The vehicle can be started when it is in N position. Apply the parking brake if the vehicle is stationary with the gear selector in the N position.

To move to another gear position when N is selected, the brake pedal must be depressed and the ignition in mode II.

D drive mode

D is the normal driving gear position. The transmission shifts up or down automatically depending on acceleration and speed.

The vehicle must be stationary when the gear selector is moved from R to D.

(i) Note

To facilitate parking and other low-speed maneuvers, the gear selector can be moved between D and R at very low speeds without depressing the brake pedal.

Brake position in instrument panel overview.

With position B, it is possible to shift gears manually. When the accelerator pedal is released, the electric motor brakes the vehicle and the hybrid battery is recharged at the same time.

 ${\sf B}$ position is selected by moving the gear selector rearward from ${\sf D}.$

- Push the gear selector to the right toward "+" (plus) and release to shift up one gear.
- Push the gear selector to the left toward "-" (minus) and release to shift down one gear.
- Push the gear selector rearward to return to D mode.

For smooth shifting and engine performance, the transmission will shift down automatically if the vehicle's speed becomes too low for the selected gear.

^[1] Brake position B is not available in drive mode **Pure**

12.2.6. Frequently asked questions about shifting during electric propulsion

Here are some questions that may arise concerning gear changes when using the electric motor.

When driving, it sometimes feels like I lose power when accelerating at about 80-90 km/h (50-56 mph). Why is this?

In the hybrid vehicles the electric motor is installed in combination with the transmission. When the electric motor is used, it starts in second gear and switches to fourth gear at high speeds (80-90 km/h (50-56 mph)).

When shifting from second to fourth gear while accelerating, the engine loses power, i.e. the torque from the engine is reduced for a short period of time in order to perform the gear shift. This behavior is normal.

Why does the vehicle need to shift gears?

571 / 1010

By using a low gear at lower speeds, the electric performance can be improved at takeoff and during low-speed driving. This means that the power from a combustion engine is not needed in the same way as in a regular hybrid.

By using a high gear at higher speeds, the electric propulsion and the power can be used for higher speeds. This can help reduce energy consumption at higher speeds.

Sometimes I don't feel like the engine is losing power. Why is this?

The power transmission will always strive to change gears from second to fourth gear during electric propulsion whenever the driver fully or partially releases the accelerator pedal. This means that the driver will barely notice the gear change. If the driver instead applies constant acceleration from lower speeds up to about 90 km/h (56 mph), the gear change will be noticeable in the way described above.

When the speed is reduced, the downshift from fourth to second gear will be barely noticeable because no extra power is required for downshifting. The gear change can therefore take place without any interruptions in power.

12.2.7. Automatic transmission symbols and messages

If a problem occurs with the transmission, a symbol and a message are displayed in the instrument panel.

(!)Important

Check the operating temperature of the transmission to help avoid damage to any of the drive system components. If there is a risk of overheating, a warning symbol will appear in the instrument panel and a text message will be displayed. Follow the recommendations given.

Symbol	Meaning
•	A fault has occurred in the transmission. Read the message in the instrument panel.
٢	Hot or overheated transmission. Read the message in the instrument panel.
	Temporary fault in driveline. Read the message in the instrument panel.

12.2.8. Shiftlock

The automatic transmission's shiftlock function helps prevent inadvertently moving the gear selector between different positions.

Automatic shiftlock

The automatic shiftlock has a separate safety system.

From Park - P or Neutral - N

To move the gear selector from P or N to another gear selector position, the brake pedal must be depressed and the ignition in mode ||. For some transmission variants, the engine must be running.

If the gear selector is in N and the vehicle has been stationary for at least 3 seconds (with or without the engine running), the gear selector will be locked in that position.

Messages in the instrument panel

If the gear selector is locked in position a message will appear in the instrument panel e.g. Gear lever Press brake pedal to activate gear lever.

There is no mechanical shiftlock function.

12.3. Brakes

12.3.1. Foot brake

12.3.1.1. Brake Assist System

The brake enhancing system, (BAS^[1]), helps increase braking force and can thereby reduce braking distance.

The system monitors the driver's braking habits and increases braking force when necessary. Braking force can be increased up to the point at which the ABS intervenes.

^[1] Brake Assist System

12.3.1.2. Braking on salted roads

When driving on salted roads, a layer of salt may form on the brake discs and brake pads.

This could increase stopping distance. Maintain an extra large safety distance to the vehicle ahead. Make sure to also:

- Apply the brakes from time to time to help remove salt. Make sure braking does not pose a risk to any other road users.
- Gently apply the brakes when you have finished driving and before driving again.

573 / 1010

12.3.1.3. Braking on wet roads

Prolonged driving in heavy rain without braking may cause braking effect to be slightly delayed the first time the brakes are applied.

This may also occur after washing the vehicle. It will then be necessary to apply greater pressure to the brake pedal. You should therefore maintain a greater distance to the vehicle ahead.

Firmly apply the brakes after washing the vehicle or driving on wet roads. This helps warm up the brake discs, enabling them to dry more quickly and protecting them against corrosion. Consider the current traffic situation when braking.

12.3.1.4. Brakes

The brake pedal is used to apply the vehicle's regular brakes, which are part of the brake system.

The vehicle is equipped with two brake circuits. If one brake circuit is damaged, the brake pedal may go down further when depressed. More pressure will then be required from the driver for normal braking effect.

If the brake pedal is used when the vehicle is switched off, the pedal must be depressed with greater pressure, past the normal braking position, in order to brake the vehicle.

In very hilly areas or when driving with a heavy load, gear position B can be used to augment the brakes with engine braking.

Anti-lock brakes

The vehicle is equipped with an Anti-lock Braking System (ABS^[1]), which helps prevent the wheels from locking and helps maintain steering control when braking. Vibrations may be felt from the brake pedal when ABS is operating, which is normal.

After the vehicle is started, a brief test of the ABS system is automatically performed when the driver releases the brake pedal. An additional automatic test of the system may be performed when the vehicle is traveling at a low speed. During the test, the brake pedal may feel as though it is pulsating.

Light braking charges the hybrid battery

Energy is regenerated to the battery during light braking. This converts the vehicle's kinetic energy into electrical energy, which is used to charge the hybrid battery. When the battery is being charged using regenerative braking, this will be indicated in the instrument panel.

When the battery is being charged with the electric motor braking function, this will be indicated in the instrument panel.

This function is active at speeds in the range of 150-5 km/h (93-3 mph). When braking at speeds outside of this range, or during harder braking, the hydraulic braking system is used to augment braking. This is indicated in the instrument panel with the pointer down in the red area.

Symbols in the instrument panel

/ Warning

If the warning symbols for both brake fault and ABS fault are lit simultaneously, there may be a fault in the brake system.

- If the brake fluid reservoir level is normal when this occurs, drive carefully to the nearest workshop to have the brake system checked an authorized Volvo workshop is recommended.
- If the brake fluid has fallen below the MIN level in the brake fluid reservoir, the vehicle should not be driven until the brake fluid has been filled. The reason for the brake fluid loss must be checked.

^[1] Anti-lock Braking System

^[2] In Canada.

^[3] In the US.

12.3.1.5. Maintenance of the brake system

Regularly check the brake system components for wear.

To keep the vehicle as safe and reliable as possible, follow the Volvo service schedule specified in the Warranty and Maintenance Records Information booklet. After replacing brake pads and brake discs, braking effect is not adapted until they are "broken in" by driving a few hundred kilometers (miles). Compensate for the reduced braking effect by applying greater pressure to the brake pedal. Volvo recommends only using brake pads approved for your Volvo.

(!) Important

The brake system's components should be regularly checked for wear.

Contact a workshop for advice on how to do this or let a workshop perform the inspection - an authorized Volvo workshop is recommended.

12.3.2. Parking brake

12.3.2.1. Parking brake
The parking brake helps keep the vehicle stationary by mechanically locking two wheels.

When the electric parking brake is being applied, a faint sound can be heard from the brake's electric motor. This sound can also be heard during the automatic function check of the parking brake.

If the vehicle is stationary when the parking brake is activated, it will only be applied to the rear wheels. If it is activated while the vehicle is moving, the normal brakes will be used on all four wheels. Braking will be transferred to only the rear wheels when the vehicle is almost stopped.

12.3.2.2. Activating and deactivating the parking brake

Use the parking brake to help keep the vehicle stationary when it is parked.

Activating the parking brake

- 1 Pull up the control.
- > The symbol in the instrument panel will illuminate when the parking brake is activated.
- 2 Make sure the vehicle is stationary.

Symbol in the instrument panel

Symbol	Meaning
(P)	The symbol will be illuminated when the parking brake is activated. A flashing symbol indicates that a fault has been detected. Read the message in the instrument panel.
PARK [2]	

Automatic activation

The parking brake is applied automatically

- when the ignition is switched off and the setting for automatically activating the parking brake is activated in the center display.
- when the gear selector is moved to P on a steep hill.
- if the auto-hold brake (automatic brake at standstill) function is activated and
 - the vehicle has been stationary for a prolonged period of time (5-10 minutes).
 - the vehicle is switched off.
 - the driver has left the vehicle.

Emergency braking

In an emergency, the parking brake can be activated when the vehicle is moving by pulling and holding up the control. The braking process is canceled when the control is released or if the accelerator pedal is depressed.

(i) Note

In case of emergency braking at high speeds, a signal sounds during the brake procedure.

Deactivating the parking brake

Deactivating manually

The parking brake can only be deactivated if the engine is running.

- 1 Depress the brake pedal firmly.
- **2** Press the control down.
- > The parking brake will release and the symbol in the instrument panel will go out.

Deactivating automatically

- 1 Start the vehicle.
- 2 Depress the brake pedal firmly. Move the gear selector to D or R and press the accelerator pedal.
- > The parking brake will release and the symbol in the instrument panel will go out.
 - (i) Note

For automatic deactivation to be possible, the driver's seat belt must be buckled or the driver's door closed.

^[1] Canadian models.

^[2] US models.

12.3.2.3. Parking on a hill

Always activate the parking brake when parking on a hill.

Verning

Always apply the parking brake when parking on an incline. Selecting a gear or putting the automatic transmission in **P** may not be sufficient to keep the vehicle stationary in all situations.

If the vehicle is pointing uphill:

• Turn the front wheels so they are pointing **away from** the curb.

If the vehicle is pointing downhill:

• Turn the front wheels so they are pointing **toward** the curb.

Heavy load uphill

Heavy loads, such as a trailer, could cause the vehicle to roll backward when the parking brake is released automatically on steep uphill gradients. To help avoid this, pull the control upward while you are driving away. Release the control when the vehicle gains traction.

12.3.2.4. Settings for automatically activating the parking brake

Choose whether the parking brake should be activated automatically when the vehicle is switched off.

To change this setting:

- 1 Tap Settings in the center display's Top view.
- 2 Tap My Car → Parking Brake and Suspension and select or deselect the Auto Activate Parking Brake function.

12.3.2.5. Parking brake malfunction

If you are unable to deactivate or activate the parking brake after several attempts, contact an authorized Volvo workshop.

A audible warning signal will sound if the parking brake is activated while the vehicle is being driven.

If the vehicle must be parked before the problem is rectified, turn the wheels as when parking on an incline and put the gear selector in P.

Low battery charge level

If the battery charge level is too low, it will not be possible to activate or deactivate the parking brake. Connect an auxiliary battery to the vehicle if the battery is discharged.

Replacing brake pads

Due to the design of the electric parking brake, the rear brake pads must be replaced by a workshop. An authorized Volvo workshop is recommended.

Symbols in the instrument panel

Symbol	Meaning
(P) [1]	A flashing symbol indicates that a fault has been detected. See the message in the instrument panel.
PARK [2]	
((!)) [1]	Fault in the brake system. See the message in the instrument panel.
BRAKE	
	Information message in the instrument panel.

^[1] Canadian models.

^[2] US models.

12.3.3. Brake fluid specifications

The medium in the hydraulic brake system is called brake fluid and is used to transfer pressure from e.g. a brake pedal via a master brake cylinder, which in turn actuates the brake calipers.

Recommended grade: Volvo Original or similar fluid that meets a combination of Dot 4, 5.1 and ISO 4925 class 6.

i Note

Changing or filling brake fluid should be entrusted to an authorized Volvo workshop.

12.3.4. Brake functions

The vehicle's brakes are used to reduce speed or prevent the vehicle from rolling.

In addition to the wheel brakes and parking brakes, the vehicle is also equipped with a number of automatic brake assist functions. These systems provide assistance by e.g. the driver not needing to depress the brake pedal at a traffic light or when starting up a hill.

Depending on how the vehicle is equipped, the following brake assist functions may be included:

- Auto-hold brake function at a standstill (Auto Hold)
- Hill Start Assist (Hill Start Assist)
- Braking assist after a collision
- City Safety

12.3.5. Auto-hold brakes

With the Auto-hold brake function, the driver can release the brake pedal and the brakes will remain applied, for example, when the vehicle has stopped at a traffic light or intersection.

When the vehicle stops, the brakes are activated automatically. The function can use either the normal brakes or the parking brakes to keep the vehicle stationary and works on flat surfaces or hills. If the driver has their seat belt fastened and/or if the driver's door is closed, the brakes will disengage automatically when the vehicle starts driving.

(i) Note

When braking to a stop on an uphill or downhill gradient, depress the brake pedal with slightly more force than usual before releasing to ensure that the vehicle cannot move at all.

The parking brake is activated if

- the vehicle is switched off.
- the driver's door is opened

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note.

- the driver's seat belt is removed
- the vehicle has been stationary for a prolonged period of time (5-10 minutes)

Auto hold can also switch over to the parking brake in other situations.

Symbols in the instrument panel

Symbol	Meaning
	This symbol illuminates when the function is using the normal brakes to keep the vehicle stationary.
(P) [1]	This symbol illuminates when the function is using the parking brake to keep the vehicle stationary.
PARK	

^[1] Canadian models.

^[2] US models.

12.3.6. Activating and deactivating Auto-hold at a standstill

The Auto-hold brake function at a standstill is activated with the button in the tunnel console.

- 1 Press the button in the tunnel console to activate or deactivate the function.
- > The indicator light in the button will illuminate when the function is activated. The function will remain active the next time the vehicle is started.

When shutting off

If the function is active and holding the vehicle stationary using the normal brakes (A symbol lit in the instrument panel), the brake pedal must be depressed while pressing the button in order to deactivate Auto-hold.

- The function will remain off until it is reactivated.
- When Auto-hold is switched off, Hill Start Assist (HSA) will remain active to help prevent the vehicle from rolling backward when starting up a hill.

12.3.7. Braking assist after a collision

In a collision in which the activation level is reached for the pyrotechnic seat belt tensioners or airbags, or if a collision with a large animal is detected, the vehicle's brakes will be automatically activated. This function is intended to help prevent or reduce the effects of any subsequent collision.

After a serious collision, it may no longer be possible to control and steer the vehicle. In order to avoid or mitigate a possible further collision with a vehicle or an object in the vehicle's path, the brake assist system is activated automatically to help stop the vehicle safely.

The brake lights and hazard warning flashers are activated during braking. When the vehicle has stopped, the hazard warning flashers will continue to flash and the parking brake will be applied.

If braking is not appropriate, e.g. if there is a risk of being hit by passing traffic, the driver can override the system by depressing the accelerator pedal.

This function assumes that the brake system is intact after a collision.

12.3.8. Hill Start Assist

The function for assisting when starting the vehicle on inclines (HSA^[1]) helps prevent the vehicle from rolling backward when starting on an uphill gradient. When backing up a hill, HSA helps prevent the vehicle from rolling forward.

The function retains pressure from the brake pedal in the brake system for several seconds after the brake pedal has been released.

This temporary braking effect is released after a few seconds or when the driver begins driving.

Hill Start Assist is activated when the vehicle is stopped on steep inclines. The function is available even when the Auto-hold brake function is switched off.

^[1] Hill Start Assist

12.3.9. Regenerative braking*

The vehicle recovers kinetic energy during braking in order to reduce fuel consumption and emissions.

The battery symbol is shown in the driver display when the car is generating power for the battery.

The function is available in all drive modes together with gear selector position D or B.

Activating brake regeneration

Brake regeneration is activated by gentle pressure on the brake pedal or during engine braking.

Regeneration increases during engine braking if manual gear selector position B is selected.

* Option/accessory.

12.4. Drive systems

12.4.1. Drive systems

The vehicle combines a gasoline engine with an electric motor.

Two drive systems

Depending on the selected drive mode and power available in the electric motor, the drive systems can either be used separately or in tandem.

The electric motor gets its energy from a hybrid battery located under the tunnel console. The hybrid can be charged from a wall outlet or in a special charging station.

Both the combustion engine and the electric motor can generate power directly to the wheels. An advanced control system coordinates both the drive systems to help optimize driving economy.

- Hybrid battery The hybrid battery's function is to store electrical current. This current is provided by plugging the charging cable into an electrical outlet or through regenerative braking. This provides current to power the electric motor and to temporarily power the electrical air conditioning to precondition the passenger compartment.
- 2 Combustion engine The combustion engine starts when the charge level in the hybrid battery is too low to provide the power output requested by the driver.
- **3** Super capacitor Supplies current to start the vehicle, which saves current in the regular 12 V battery.
- 4 Electric motor Powers the vehicle using electricity. Can provide extra torque and power during acceleration. Regenerates braking energy into electrical current.

12.5. Drive modes

12.5.1. Regenerative braking*

The vehicle recovers kinetic energy during braking in order to reduce fuel consumption and emissions.

The battery symbol is shown in the driver display when the car is generating power for the battery.

The function is available in all drive modes together with gear selector position D or B.

Activating brake regeneration

Brake regeneration is activated by gentle pressure on the brake pedal or during engine braking.

Regeneration increases during engine braking if manual gear selector position B is selected.

* Option/accessory.

12.5.2. Hold and Charge

In certain situations, it can be useful to control the hybrid battery's charge level while driving. This is possible with the **Hold** and **Charge** functions.

Hold and Charge are available in all drive modes. The functions will switch off if Pure drive mode is activated.

Activating Hold and Charge

The functions can be activated in the center display's Function view.

Hold

Battery level sustained for later use.

This function retains the charge in the hybrid battery for the electric motor and saves available electrical current for use at a later time, such as when driving in an urban area.

The vehicle will function as in normal hybrid driving with a discharged battery - in addition to reusing energy from e.g. regenerative braking, the combustion engine will be used more frequently to maintain the charge in the battery.

(i) Note

The battery level can be affected when using **Hold** if, for example, the vehicle is heavily loaded, has equipment connected to the towbar or drives up a long hill.

Charge

2

Engine charges hybrid battery.

This function charges the hybrid battery with the help of the combustion engine for increased use of the electric motor at a later time.

Symbols in the instrument panel

The f symbol is displayed in the hybrid battery gauge when Hold is activated.

The **5** symbol is displayed in the hybrid battery gauge when Charge is activated.

12.5.3. Drive modes

Drive modes affect the vehicle's driving characteristics in different ways to enhance and simplify the driving experience in certain types of situations.

Drive modes enable easy access to the vehicle's many functions and settings in different driving situations. Each drive mode is adapted to help optimize driving characteristics.

- Steering
- Engine/transmission
- Brakes
- Shock absorbers
- Instrument panel
- Climate control settings

Select the drive mode that is adapted to the current driving conditions. Keep in mind that not all drive modes are available in all situations.

Available drive modes

/! Warning

Please be aware that there is no sound from the engine when the vehicle is being powered by the electric motor and it may be difficult to detect by children, pedestrians, cyclists and animals. This is particularly true at low speeds e.g. in parking lots.

/ Warning

Do not leave the vehicle in an unventilated area with a drive mode activated and the combustion engine switched off. The engine will start automatically if the charge level in the hybrid battery is low and the resulting exhaust gases can be very harmful to people and animals.

Hybrid

• This is the default mode in which the electric motor and combustion engine work together.

The vehicle starts in **Hybrid** mode. The control system uses both the electric motor and the gasoline engine – separately or in tandem – and adapts utilization with regard to performance, fuel consumption and comfort. Driving capacity on the electric motor alone is determined by factors such as the hybrid battery's charge level, the need for heat or cooling in the passenger compartment, etc.

If there is sufficient charge in the battery, it is possible to drive solely on electric power. When the accelerator pedal is pressed, only the electric motor will be activated until the battery reaches a certain charge level. Above this level, the current in the battery cannot supply the power requested by the accelerator pedal and the combustion engine will start.

When the hybrid battery's charge level is low, the combustion engine will start more frequently to save the remaining current in the battery. Charge the hybrid battery from a 120-240 volt outlet using a charging cable, or activate **Charge** in Function view to reset the option of only using the electric motor.

This drive mode is designed for low energy consumption with a mix between the electric motor and gasoline engine, without compromising on climate comfort or driving experience. When faster acceleration is requested by the driver, the electric drive-line will be utilized to help provide maximum additional power.

Information in the instrument panel

When driving in Hybrid mode, a hybrid gauge will be displayed in the instrument panel. The gauge will indicate the amount of electrical current required when the driver depresses the accelerator pedal. The marker between the lightning and the drop shows how much current is available.

The instrument panel gauge when both the electric motor and the combustion engine are being used.

The instrument panel also shows how much current is being restored to the battery (regenerated) during light braking.

Pure

• Uses the electric motor only, with the lowest possible energy consumption and carbon dioxide emissions.

This drive mode prioritizes the use of the hybrid battery. Certain climate system functions are reduced to provide the longest distance using only electricity.

Pure mode is available as long as the hybrid battery has a high enough charge level and available power, which can be affected by temperature. When the gasoline engine starts, the vehicle automatically switches to **Hybrid** mode until it is possible for the driver to select **Pure** mode again.

The gasoline engine starts:

- if the battery's charge level is too low
- if the driver presses the accelerator pedal all the way down.

Pure mode is not available:

- if the battery's charge level is too low
- if the vehicle's speed exceeds 140 km/h (87 mph) (does not apply on downhill gradients, etc.)
- if factors such as cold weather affect the system or components.

(i) Note

The combustion engine may start temporarily in certain situations when **Pure** drive mode is used. This is to provide the wheels with the desired torque in driving situations that require higher loads, such as when towing a trailer or driving up a hill.

This drive mode is adapted for the longest possible driving distance with electric propulsion and is primarily intended for use in city driving. **Pure** helps provide the lowest possible consumption even when the hybrid battery is fully discharged.

ECO Climate

In Pure mode, ECO climate is automatically activated in the passenger compartment to help reduce energy consumption.

(i) Note

When the **Pure** drive mode is activated, settings for certain climate system and electricity consuming functions are reduced. Some of these settings can be reset manually, but full functionality will only be restored by leaving **Pure** mode or adapting the **Individual** drive mode to full climate system functionality.

If condensation forms on the windows, tap the max defroster button, which will function normally.

Power

• The vehicle gets sportier driving characteristics and a faster acceleration response.

This drive mode adapts the combined power from the gasoline engine and the electric motor. Gear shifting will be faster and more distinct and the transmission will prioritize gears with a higher traction force. Steering response is faster and suspension

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note.

is stiffer.

This drive mode is adapted for optimal performance and response during acceleration. It changes the throttle response, gear shifting program and turbo boost system. Chassis settings and steering and brake response are also optimized. The **Power** drive mode is always available regardless of the hybrid battery's charge status.

Power mode is also available in a Polestar Engineered* version.

Individual

• Customizes drive mode to personal preferences.

Select one of the drive modes as a basis and adjust the settings to achieve your preferred driving characteristics. These settings will be stored in your driver profile.

Individual drive mode is only available if it has been activated in the center display.

Settings view^[1] for Individual drive mode.

1 Tap Settings in the Top view.

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note.

- 2 Tap My Car \rightarrow Individual Drive Mode and select Individual Drive Mode.
- 3 Under Presets, select one of the following drive modes as a basis: Pure, Hybrid, Power or Polestar Engineered*. The following settings can be modified:
 - Driver Display
 - Steering Force
 - Powertrain Characteristics
 - Brake Characteristics
 - Suspension Control
 - ECO Climate

Using the electric or combustion engine

An advanced control system determines the distance that the vehicle can be driven on the combustion engine, electric motor, or both at the same time.

Its primary function is to use the motor/engine and the current available in the hybrid battery as efficiently as possible based on the characteristics of the various drive modes and the power output requested by the driver by pressing the accelerator pedal.

In certain cases, temporary limitations in the system or mandatory functions to help maintain a low overall emissions level may result in greater use of the combustion engine.

* Option/accessory.

^[1] The illustration is generic - details may vary according to vehicle model.

12.5.4. Changing drive mode

Select the drive mode that is adapted to the current driving conditions. The drive mode is changed using the button in the center console.

To change drive mode:

Tap the DRIVE MODE button.

> A pop-up menu opens in the center display with the active drive mode marked.

2 Drive mode can be selected two different ways:

- Tap the desired drive mode directly on the touchscreen to select and activate it.
- Tap the DRIVE MODE button again to move the cursor to the desired drive mode. The selected drive mode is activated after a brief delay.

12.5.5. Energy distribution using map data*

In **Hybrid** drive mode, the vehicle is powered by both the electric motor and the gasoline engine. If a destination has been selected in the navigation system*, the Predictive Efficiency^[1] function can use map data to distribute electric power consumption throughout the trip.

This can lower fuel consumption in comparison with normal hybrid mode, in which the vehicle first runs on electricity and then switches to the gasoline engine when the hybrid battery is discharged.

Function

If the distance to the selected destination is greater than the calculated range on the electric motor, the function will distribute the electric power to make consumption as energy-efficient as possible throughout the trip. This makes it possible to avoid situations in which normal hybrid mode would otherwise use a large portion of the electric power to e.g. use the electric motor at high speeds on a highway and then use the combustion engine at lower speeds during city driving.

The greatest fuel savings are achieved when

- the trip begins on a highway
- the trip is between 50 and 100 km (30 and 60 miles) long
- the hybrid battery is fully charged at the start of the trip.

Requirements for the function

Certain conditions must be met for the function to be possible:

- A destination must be set in the navigation system and the distance to the destination must be longer than the possible range using only the electric motor.
- Hybrid drive mode must be selected.
- The Hold and Charge functions must be disabled.
- The hybrid battery must be charged.

Usage tips

If you commute and it is not possible to charge the vehicle at work, enter your workplace as a waypoint and your home as the destination. Discharging of the hybrid battery will then be distributed over the entire commute to and from work.

Add similar commutes, i.e. the route between two charges, as Favorites in the navigation system to facilitate access.

- * Option/accessory.
- ^[1] Only certain markets.

12.5.6. The Launch function*

Launch can be used to provide maximum acceleration from a standstill. The function is available for the drive modes: **Hybrid**, **Constant AWD**, **Power** and **Individual**.

Activating Launch

Make sure that the vehicle is stationary and that the wheels are pointing straight ahead.

- **1** Put the gear selector in D position.
- 2 Depress the brake pedal fully.
- **3** Then fully depress the accelerator pedal.
- **4** Release the brake pedal within 2 seconds.

(i) Note

If the Launch function does not work, wait a few minutes to let the driveline reach working temperature before trying again.

Important	
The driveline is exposed to wear when using Launch and the function is the times.	erefore only available a limited number of

* Option/accessory.

12.5.7. Range in electric mode

A number of factors can affect vehicle range. The ability to achieve a long driving range varies according to the outside conditions and to how the vehicle is driven.

The certified value for the vehicle's range should not be considered an expected driving range. The certified value is obtained during special test cycles and is primarily intended to be used for comparisons between different vehicles.

B YBRID 1/2 1/2 4.5 ℓ/100 km

Range in the instrument panel

When the vehicle leaves the factory, or after a factory reset, range is based on the certified value.

Once the vehicle has been driven for a while, range is instead based on historical driving patterns. The amount of history used depends on the battery's charge level. The lower the charge level of the hybrid battery, the more quickly the range adapts to changed driving patterns.

Factors affecting driving range

There are a number of other factors in addition to historical trip data that affect range. The longest range is achieved under very favorable conditions when all factors positively influence range.

Factors affecting range include:

- speed
- climate control settings
- topography

- preconditioning
- tires and tire pressure
- the current traffic situation
- temperature and weather
- road conditions.

Range based on speed and ambient temperature

- 1 20 °C (68 °F) ambient temperature and passenger compartment climate control off.
- **2** 20 °C (68 °F) ambient temperature and passenger compartment climate control on.
- **3**35 °C (95 °F) ambient temperature and passenger compartment climate control on.

4 -10 °C (14 °F) ambient temperature and passenger compartment climate control on.

The graph shows the approximate relationship between constant speed and driving range. Driving at a lower constant speed helps increase the electric motor's driving range.

Higher ambient temperature and deactivated climate system are also more favorable for range.

12.6. Driving recommendations

12.6.1. Towing using a towline

This section refers to one vehicle being towed behind another using a towline.

(!) Important

Never attempt to tow the vehicle behind another vehicle as this could damage the electric motor. The vehicle must instead be lifted onto a tow truck and transported with all four wheels on the bed or lifting platform of the truck (no wheels may touch the road).

(!) Important

Never tow the vehicle with the front wheels touching the road, as this will damage the electric motor. Instead, tow the vehicle with the front wheels on a dolly, or transport the vehicle on a tow truck with all four wheels raised on the bed of the truck.

Towing another vehicle

Before towing another vehicle, check applicable speed limit regulations.

Jump starting

Never attempt to tow the vehicle to start the engine, as this could damage the electric motor. Use an auxiliary battery if the start battery's charge level is so low that the engine cannot be started.

(!) Important

Attempts to tow-start the vehicle could cause damage to the electrical drive motor and three-way catalytic converter.

12.6.2. Hill Start Assist

The function for assisting when starting the vehicle on inclines (HSA^[1]) helps prevent the vehicle from rolling backward when starting on an uphill gradient. When backing up a hill, HSA helps prevent the vehicle from rolling forward.

The function retains pressure from the brake pedal in the brake system for several seconds after the brake pedal has been released.

This temporary braking effect is released after a few seconds or when the driver begins driving.

Hill Start Assist is activated when the vehicle is stopped on steep inclines. The function is available even when the Auto-hold brake function is switched off.

^[1] Hill Start Assist

12.6.3. Braking on salted roads

When driving on salted roads, a layer of salt may form on the brake discs and brake pads.

This could increase stopping distance. Maintain an extra large safety distance to the vehicle ahead. Make sure to also:

- Apply the brakes from time to time to help remove salt. Make sure braking does not pose a risk to any other road users.
- Gently apply the brakes when you have finished driving and before driving again.

12.6.4. Braking on wet roads

Prolonged driving in heavy rain without braking may cause braking effect to be slightly delayed the first time the brakes are applied.

This may also occur after washing the vehicle. It will then be necessary to apply greater pressure to the brake pedal. You should therefore maintain a greater distance to the vehicle ahead.

Firmly apply the brakes after washing the vehicle or driving on wet roads. This helps warm up the brake discs, enabling them to dry more quickly and protecting them against corrosion. Consider the current traffic situation when braking.

12.6.5. Parking on a hill

Always activate the parking brake when parking on a hill.

✓ Warning

Always apply the parking brake when parking on an incline. Selecting a gear or putting the automatic transmission in **P** may not be sufficient to keep the vehicle stationary in all situations.

If the vehicle is pointing uphill:

• Turn the front wheels so they are pointing **away from** the curb.

If the vehicle is pointing downhill:

• Turn the front wheels so they are pointing **toward** the curb.

Heavy load uphill

Heavy loads, such as a trailer, could cause the vehicle to roll backward when the parking brake is released automatically on steep uphill gradients. To help avoid this, pull the control upward while you are driving away. Release the control when the vehicle gains traction.

12.6.6. Service stations

You can use the vehicle's navigation system* to find a route to the nearest service station.

While you are stopped to refuel, it can be a good idea to perform a quick inspection of the vehicle, such as checking tire pressure, lights, wiper blades, filling washer fluid, etc.

* Option/accessory.

12.6.7. Energy distribution using map data*

In **Hybrid** drive mode, the vehicle is powered by both the electric motor and the gasoline engine. If a destination has been selected in the navigation system*, the Predictive Efficiency^[1] function can use map data to distribute electric power consumption throughout the trip.

This can lower fuel consumption in comparison with normal hybrid mode, in which the vehicle first runs on electricity and then switches to the gasoline engine when the hybrid battery is discharged.

Function

If the distance to the selected destination is greater than the calculated range on the electric motor, the function will distribute the electric power to make consumption as energy-efficient as possible throughout the trip. This makes it possible to avoid situations in which normal hybrid mode would otherwise use a large portion of the electric power to e.g. use the electric motor at high speeds on a highway and then use the combustion engine at lower speeds during city driving.

The greatest fuel savings are achieved when

- the trip begins on a highway
- the trip is between 50 and 100 km (30 and 60 miles) long
- the hybrid battery is fully charged at the start of the trip.

Requirements for the function

Certain conditions must be met for the function to be possible:

- A destination must be set in the navigation system and the distance to the destination must be longer than the possible range using only the electric motor.
- Hybrid drive mode must be selected.
- The Hold and Charge functions must be disabled.
- The hybrid battery must be charged.

Usage tips

If you commute and it is not possible to charge the vehicle at work, enter your workplace as a waypoint and your home as the destination. Discharging of the hybrid battery will then be distributed over the entire commute to and from work.

Add similar commutes, i.e. the route between two charges, as Favorites in the navigation system to facilitate access.

- * Option/accessory.
- ^[1] Only certain markets.

12.6.8. Range in electric mode

A number of factors can affect vehicle range. The ability to achieve a long driving range varies according to the outside conditions and to how the vehicle is driven.

The certified value for the vehicle's range should not be considered an expected driving range. The certified value is obtained during special test cycles and is primarily intended to be used for comparisons between different vehicles.

Range in the instrument panel

When the vehicle leaves the factory, or after a factory reset, range is based on the certified value.

Once the vehicle has been driven for a while, range is instead based on historical driving patterns. The amount of history used depends on the battery's charge level. The lower the charge level of the hybrid battery, the more quickly the range adapts to changed driving patterns.

Factors affecting driving range

There are a number of other factors in addition to historical trip data that affect range. The longest range is achieved under very favorable conditions when all factors positively influence range.

Factors affecting range include:

- speed
- climate control settings
- topography
- preconditioning
- tires and tire pressure

- the current traffic situation
- temperature and weather
- road conditions.

1,5 x 0,5 x 0,0 x 0,

Range based on speed and ambient temperature

- 1 20 °C (68 °F) ambient temperature and passenger compartment climate control off.
- **2** 20 °C (68 °F) ambient temperature and passenger compartment climate control on.
- 35 °C (95 °F) ambient temperature and passenger compartment climate control on.
- **4** -10 °C (14 °F) ambient temperature and passenger compartment climate control on.

The graph shows the approximate relationship between constant speed and driving range. Driving at a lower constant speed helps increase the electric motor's driving range.

Higher ambient temperature and deactivated climate system are also more favorable for range.

12.6.9. Economical driving

To achieve the longest possible driving range, the driver should plan the trip and adapt driving style and speed to the current situation.

Before driving

- Whenever possible, precondition the vehicle before driving by connecting the charging cable to an electrical outlet.
- If preconditioning is not possible when it is cold outside, use seat and steering wheel heating first. Avoid heating the entire passenger compartment to reduce the amount of current being taken from the hybrid battery.
- The type of tires and inflation pressure used could affect energy consumption consult an authorized Volvo retailer for advice on suitable tires.
- Remove unnecessary items from the vehicle the heavier the load, the higher the fuel consumption.

While driving

- Activate Pure drive mode.
- Activate the Hold function at high speeds when traveling farther than is possible using the hybrid battery's capacity.
- Whenever possible, avoid using the Charge function to charge the hybrid battery.
- Maintain a steady speed and a generous following distance to traffic ahead to minimize braking.
- When braking, the hybrid battery is charged by braking lightly using the brake pedal.
- Higher speeds increase energy consumption because air resistance increases with speed.
- In a cold climate, reduce heating of the windshield/rear window, mirrors, seats and the steering wheel.
- Avoid driving with the windows open.
- Do not use the accelerator pedal to keep the vehicle stationary on an uphill gradient. Instead, activate the auto-hold brake function at a standstill.
- If possible, turn off the climate system when driving shorter distances after preconditioning.

After driving

• If possible, park in a climate-controlled garage with vehicle charging outlets or stations.

12.6.10. Preparing for a long trip

It is important to have the vehicle's systems and equipment checked carefully before driving long distances.

Check that

- the engine is running properly and that fuel consumption is normal
- there are no leaks (fuel, oil or other fluid)
- the brake pedal is functioning properly
- all lights work
- tire tread depth and air pressure are at correct levels. Change to snow tires when driving in areas where there is a risk of snowy or icy roads
- the start battery is sufficiently charged
- the wiper blades are in good condition

It could also be a good idea to make sure the maps in the navigation system* are up to date, and to check requirements for vehicle loads, ferries, car trains, etc.

Keep in mind that data roaming charges may apply if the vehicle is connected to the Internet while in another country or service area.

* Option/accessory.

12.6.11. Battery drain

Using a lot of electrical current without allowing the vehicle to charge the start battery results in a low battery level and some electrical functions will be reduced or switched off. If the battery level drops below a certain level, it will not be possible to start the vehicle without jump-starting or charging with an external charger.

Several measures can be taken to reduce power consumption. Avoid using ignition mode || when the engine is switched off. Instead, use ignition mode I, which uses less electrical current. Do not use functions that use a lot of electrical current when the vehicle is not being driven. Examples of such functions are:

- blower
- headlights
- windshield wipers
- audio system
- accessories plugged into the vehicle.

If the battery level is low, a message is shown in the instrument panel. The vehicle's energy-saving function will then turn off or reduce certain functions, such as the blower and the audio system.

To charge the battery, start the engine and let it run for at least 15 minutes (driving charges the battery faster than letting the engine idle).

If the battery level is still low after taking these measures, the vehicle should be checked by a workshop – an authorized Volvo workshop is recommended.

(i) Note

High electrical current consumption may cause the battery level to become low, which will temporarily limit the Start/Stop function. The engine will then start automatically without the driver lifting their foot from the brake pedal.

12.6.12. Driving through standing water

It may be necessary to drive the vehicle through standing water e.g. deep puddles or flooding on the road. This must be done with great caution.

To help prevent damage to the vehicle when driving through water:

- Do not drive in water higher than the floor of the vehicle. If possible, check the depth of the water at its deepest point before driving through it. Be particularly careful when driving through flowing water.
- . Do not drive faster than walking speed.
- Do not stop the vehicle in the water. Drive carefully forward or back the vehicle out of the water.

- Remember that waves created by passing vehicles could cause the water level to rise above the vehicle's floor level.
- Avoid driving through salt water to help avoid the risk of corrosion.

(!) Important

Parts of the vehicle (e.g. engine, transmission, driveline, electrical components, etc.) can be damaged if the vehicle is driven through water higher than its floor level. Damage to any components caused by flooding, vapor lock or insufficient oil is not covered under warranty.

If the engine stalls while the vehicle is in water, do not attempt to restart it. Have the vehicle towed on the bed of a tow truck to a workshop - an authorized Volvo workshop is recommended.

(!) Important

Because it can be difficult to determine the water depth, Volvo recommends not driving through standing or running water. The driver is always responsible for operating the vehicle in a safe manner and adhering to all applicable laws and regulations.

When you have passed the water, press lightly on the brake pedal and check that the brakes are functioning properly. Water, mud, slush, etc. can make the brake linings slippery, resulting in delayed braking effect.

If the vehicle is equipped with a trailer coupling contact, clean the contact after driving in water or mud.

12.6.13. Winter driving

It is important to check the vehicle before driving in cold/snowy conditions to make sure it can be driven safely.

Before the cold season arrives:

- Make sure the engine coolant contains 50% antifreeze. This mixture helps protect the engine from frost erosion down to approx. –35 °C (–31 °F). Do not mix different types of antifreeze as this could pose a health risk.
- Keep the fuel tank well filled to prevent condensation from forming.
- Check the viscosity of the engine oil. Oil with low viscosity (thinner oil) improves cold-weather starting and reduces fuel consumption when driving with a cold engine.
- Check the condition and charge level of the start battery. Cold weather places greater demands on the start battery and reduces its capacity.
- Check the condition and charge level of the battery. Cold weather places greater demands on the battery and reduces its capacity.
- Use washer fluid containing antifreeze to help prevent ice from forming in the washer fluid reservoir.

See separate section for engine oil recommendations.

Slippery driving conditions

To help optimize traction and roadholding, Volvo recommends using snow tires on all wheels whenever there is a risk of snow or ice on the road.

(i) Note

Certain countries require use of winter tires by law. Not all countries permit the use of studded tires.

Practice driving on slippery surfaces under controlled conditions to learn how the vehicle reacts.

12.6.14. Overheating of engine and transmission

In certain driving conditions, such as driving in mountainous areas or hot weather, there is an increased risk of the engine or drive system overheating, especially when carrying heavy loads.

- Engine power may be temporarily limited.
- Remove any auxiliary lights mounted in front of the grille when driving in hot weather.
- If the temperature in the engine's cooling system becomes too high, a warning symbol will appear in the instrument panel along with the message Engine temperature High temperature Stop safely. Pull over to a safe location and let the engine idle for a few minutes to cool down.
- If the message Engine temperature High temperature Turn off engine or Engine coolant Level low, turn off engine is displayed, stop the vehicle and turn off the engine.
- If the transmission begins to overheat, an alternative gear shifting program will be selected. An integrated protective
 function will also be activated, the warning symbol will illuminate and the message Transmission warm Reduce speed to
 lower temperature or Transmission hot Stop safely, wait for cooling will be displayed in the instrument panel. Follow the
 recommendations given by reducing speed or stopping the vehicle safely and letting the engine idle for a few minutes to let
 the transmission cool.
- If the vehicle begins to overheat, the air conditioning may be temporarily switched off.
- After a prolonged period of driving in demanding conditions, do not turn off the engine immediately after stopping.

(i) Note

It is normal for the engine's cooling fan to operate for a short time after the engine is switched off.

Symbols in the instrument panel

Symbol	Meaning
	High engine temperature. Follow the recommendations provided.
	Low coolant level. Follow the recommendations provided.
٥	Transmission hot/overheated/cooling. Follow the recommendations provided.

12.6.15. Driving with a trailer

There are a number of things to consider when towing a trailer, such as the towbar, the trailer and how the load is distributed in the trailer.

Load-carrying capacity is determined by the vehicle's curb weight. The total weight of all passengers and any installed accessories, e.g. towbar, reduces the vehicle's load-carrying capacity by the corresponding amount.

- Towbars used on the vehicle must be approved for the applicable use.
- Distribute the load on the trailer so that the weight on the towbar complies with the specified maximum towball weight. The tongue weight is calculated as part of the vehicle's payload.
- Increase the tire pressure to the recommended pressure for a full load.
- The engine is subjected to more load than usual when towing a trailer.
- Towing a trailer affects the vehicle's handling, durability and driving economy.
- Do not drive with a heavy trailer when the vehicle is very new. Wait until the mileage has reached at least 1000 km (620 miles).
- On long and steep downgrades, the vehicle's brakes are subjected to much more load than usual. When manually shifting, downshift and adapt speed accordingly.
- Follow applicable regulations regarding permitted speed and weight.
- Drive slowly when towing a trailer up a long and steep incline.
- The maximum trailer weights given only apply to altitudes up to 1000 meters (3280 feet) above sea level. At higher
 altitudes, engine power (and thus the vehicle's climbing ability) is decreased due to the reduced air density, and the
 maximum trailer weight must therefore be reduced. The weight of the vehicle and trailer must be decreased by 10% for
 each additional 1000 m (3280 feet) or part thereof.
- Avoid driving with a trailer on inclines of more than 12%.
- Avoid overloading and other incorrect use.
- The trailer's brakes must be balanced with the vehicle's brakes to help ensure safe stops (follow applicable local regulations).

() Important

- Bumper-attached trailer hitches must not be used on Volvos, nor should safety chains be attached to the bumper.
- Trailer hitches attaching to the vehicle rear axle must not be used.
- Never connect a trailer's hydraulic brake system directly to the vehicle brake system, nor a trailer's lighting system directly to the vehicle lighting system. Consult your nearest authorized Volvo retailer for correct installation.
- When towing a trailer, the trailer's safety chains or wire must be correctly fastened to the attachment points provided in the trailer hitch on the vehicle. The safety chain or wire must never be fastened to or wound around the towing ball.

(i) Note

The optional detachable trailer hitch may not be available in all markets or on all models. Consult your Volvo retailer.

(i) Note

Extreme weather conditions, towing a trailer, high altitude and lower fuel grade than recommended are factors that can significantly increase the vehicle's fuel consumption.

Trailer weights

Warning

Please adhere to the recommendations provided for trailer weight. If the recommendations are not followed, the vehicle and trailer may be difficult to control during evasive maneuvers and braking.

(i) Note

The specified maximum trailer weights are those permitted by Volvo. National vehicle regulations may set additional restrictions on trailer weight and speed. The trailer hitches may be certified for higher towing weights than the vehicle is permitted to tow.

Self-leveling suspension*

The vehicle's self-leveling system attempts to keep the vehicle at a constant level, regardless of load (up to the maximum permitted weight). When the vehicle is stationary, the rear end of the vehicle will be slightly lowered, which is normal.

Driving in mountainous areas

In certain conditions, there is a risk of overheating when driving with a trailer. If overheating of the engine and drive system is detected, a warning symbol will illuminate in the instrument panel and a message will appear.

The automatic transmission adapts the gear for the current load and engine speed.

Steep inclines

Do not lock the automatic transmission into a higher gear than what the engine can handle – it is not always preferable to drive in high gears at low rpm.

Parking on a hill

- 1 Depress the brake pedal.
- **2** Apply the parking brake.
- **3** Put the gear selector in P.
- 4 Release the brake pedal.

Put chocks behind the wheels when the vehicle is parked on a hill with a trailer attached.

Starting on a hill

- 1 Depress the brake pedal.
- 2 Put the gear selector in D.
- **3** Release the parking brake.
- **4** Release the brake pedal and start driving.

* Option/accessory.

12.7. Trailer hitch and trailer

12.7.1. Towing capacity and tongue weight

Towing capacity and tongue weight are shown in the table.

() Important

• The maximum trailer weights listed are only applicable for altitudes up to 3280 ft(1,000 m) above sea level. With increasing altitude the engine power and therefore the car's climbing ability are impaired because of the reduced air density, so the maximum trailer weight has to be reduced accordingly. The weight of the car and trailer must be reduced by 10% for every further 3280 ft(1,000 m) (or part thereof).

12.7.2. Towbar hitch^[1] *

Volvo recommends the use of Volvo towbars that are specially designed for the vehicle.

(i) Note

The optional detachable trailer hitch may not be available in all markets or on all models. Consult your Volvo retailer.

Installing the ball holder

- 1 If necessary, remove the cotter pin from the locking bolt and slide the locking bolt out of the towbar assembly.
- 2 Slide the ball holder into the towbar assembly.
- 3 Align the hole in the ball holder with the one in the towbar assembly.
- **4** Slide the locking bolt through the towbar assembly/ball holder.

/ Warning

- Be sure the towbar is securely locked in position before attaching anything to it.
- Always attach the trailer's safety wire securely to the towbar's safety wire attachment bracket.

Removing the ball holder

- 1 Remove the cotter pin from the locking bolt and slide the locking bolt out of the ball holder/towbar assembly.
- 2 Pull the ball holder out of the towbar assembly.

Stowing the ball holder

Warning

When not in use, the detachable ball holder should always be properly stowed in the designated location under the floor of the cargo compartment.

^[1] The following markets only: USA, Canada, Chile, Mexico, Peru, Puerto Rico, Australia and New Zealand.

* Option/accessory.

12.7.3. Driving with a trailer

There are a number of things to consider when towing a trailer, such as the towbar, the trailer and how the load is distributed in the trailer.

Load-carrying capacity is determined by the vehicle's curb weight. The total weight of all passengers and any installed accessories, e.g. towbar, reduces the vehicle's load-carrying capacity by the corresponding amount.

- Towbars used on the vehicle must be approved for the applicable use.
- Distribute the load on the trailer so that the weight on the towbar complies with the specified maximum towball weight. The tongue weight is calculated as part of the vehicle's payload.
- Increase the tire pressure to the recommended pressure for a full load.
- The engine is subjected to more load than usual when towing a trailer.
- Towing a trailer affects the vehicle's handling, durability and driving economy.

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note.

611 / 1010

- Do not drive with a heavy trailer when the vehicle is very new. Wait until the mileage has reached at least 1000 km (620 miles).
- On long and steep downgrades, the vehicle's brakes are subjected to much more load than usual. When manually shifting, downshift and adapt speed accordingly.
- Follow applicable regulations regarding permitted speed and weight.
- Drive slowly when towing a trailer up a long and steep incline.
- The maximum trailer weights given only apply to altitudes up to 1000 meters (3280 feet) above sea level. At higher altitudes, engine power (and thus the vehicle's climbing ability) is decreased due to the reduced air density, and the maximum trailer weight must therefore be reduced. The weight of the vehicle and trailer must be decreased by 10% for each additional 1000 m (3280 feet) or part thereof.
- Avoid driving with a trailer on inclines of more than 12%.
- Avoid overloading and other incorrect use.
- The trailer's brakes must be balanced with the vehicle's brakes to help ensure safe stops (follow applicable local regulations).

(!) Important

- Bumper-attached trailer hitches must not be used on Volvos, nor should safety chains be attached to the bumper.
- Trailer hitches attaching to the vehicle rear axle must not be used.
- Never connect a trailer's hydraulic brake system directly to the vehicle brake system, nor a trailer's lighting system directly to the vehicle lighting system. Consult your nearest authorized Volvo retailer for correct installation.
- When towing a trailer, the trailer's safety chains or wire must be correctly fastened to the attachment points provided in the trailer hitch on the vehicle. The safety chain or wire must never be fastened to or wound around the towing ball.

(i) Note

The optional detachable trailer hitch may not be available in all markets or on all models. Consult your Volvo retailer.

(i) Note

Extreme weather conditions, towing a trailer, high altitude and lower fuel grade than recommended are factors that can significantly increase the vehicle's fuel consumption.

Trailer weights

· Warning

Please adhere to the recommendations provided for trailer weight. If the recommendations are not followed, the vehicle and trailer may be difficult to control during evasive maneuvers and braking.
(i) Note

The specified maximum trailer weights are those permitted by Volvo. National vehicle regulations may set additional restrictions on trailer weight and speed. The trailer hitches may be certified for higher towing weights than the vehicle is permitted to tow.

Self-leveling suspension*

The vehicle's self-leveling system attempts to keep the vehicle at a constant level, regardless of load (up to the maximum permitted weight). When the vehicle is stationary, the rear end of the vehicle will be slightly lowered, which is normal.

Driving in mountainous areas

In certain conditions, there is a risk of overheating when driving with a trailer. If overheating of the engine and drive system is detected, a warning symbol will illuminate in the instrument panel and a message will appear.

The automatic transmission adapts the gear for the current load and engine speed.

Steep inclines

Do not lock the automatic transmission into a higher gear than what the engine can handle - it is not always preferable to drive in high gears at low rpm.

Parking on a hill

- Depress the brake pedal. 1
- Apply the parking brake. 2
- Put the gear selector in P. 3
- Release the brake pedal. 4

Put chocks behind the wheels when the vehicle is parked on a hill with a trailer attached.

Starting on a hill

- Depress the brake pedal. 1
- Put the gear selector in D. 2
- Release the parking brake. 3
- Release the brake pedal and start driving. 4

12.7.4. Trailer Stability Assist*

Trailer Stability Assist (TSA^[1]) is part of the ESC^[2] stability system and is a function designed to help stabilize a vehicle that is towing a trailer when the vehicle and trailer have begun to sway. The function is added when installing a towbar. Contact a Volvo retailer for more information.

Reasons for swaying

A vehicle towing a trailer may begin to sway for various reasons. Normally this only occurs at high speeds. However, if the trailer is overloaded or unevenly distributed, e.g. too far back, there is a risk of swaying even at low speeds.

Swaying may be caused by factors such as:

- The vehicle and trailer are hit by a sudden, strong crosswind.
- The vehicle and trailer are traveling on an uneven road or over a bump.
- Sudden movements of the steering wheel.

Once swaying has begun, it can be difficult or impossible to stop it. This makes the vehicle and trailer difficult to control and there is a risk of swerving into oncoming traffic or driving off the road.

Trailer Stability Assist function

Trailer Stability Assist continuously monitors the vehicle's movements, particularly lateral movements. If swaying is detected, the brakes are applied individually on the front wheels, which has a stabilizing effect on the vehicle and trailer. This is often enough to enable the driver to regain control of the vehicle.

If the Trailer Stability Assist function's first attempt is not adequate to stop the swaying motion, the brakes are applied on all wheels and vehicle power is temporarily reduced. As the swaying motion begins to decrease and the vehicle and trailer have once again become stable, TSA stops regulating the brakes/engine power and the driver regains control of the vehicle.

(i) Note

Trailer Stability Assist is deactivated if the driver activates ESC Sport Mode in the center display's menu system.

Trailer Stability Assist may not intervene if the driver tries to compensate for the swaying motion by moving the steering wheel rapidly, because the system will then not be able to determine if it is the trailer or the driver causing the swaying.

When Trailer Stability Assist is activated, the ESC symbol is displayed in the instrument panel.

(i) Note

A vehicle software update is required when a towbar is retrofitted. Contact a Volvo retailer.

* Option/accessory.

^[1] Trailer Stability Assist

^[2] Electronic Stability Control

12.7.5. Checking trailer lights*

When connecting a trailer, make sure that the trailer's lights are functioning before starting to drive.

Checking trailer lights*

Automatic check

When the trailer has been connected to the vehicle's electrical system, its lights can be checked by automatically activating them. This function helps the driver check that the trailer's lights are functioning correctly before starting to drive.

In order to perform this check, the vehicle must be switched off.

- When a trailer is connected to the towbar, the message Automatic Trailer Lamp Check will appear in the instrument 1 panel.
- Acknowledge the message by pressing the O button on the right-side steering wheel keypad. 2
- > The light check will begin.
- Get out of the vehicle to perform the check. 3
- All of the lights on the trailer will begin flashing, and then illuminate separately one at a time. >
- Visually check that all of the trailer's lights are functioning correctly. 4
- After a short time, all of the trailer's lights will start flashing again. 5
- > The light check is completed.

Disabling the automatic check

The automatic light check can be disabled in the center display.

Tap Settings in the Top view. 1

- 2 Tap My Car → Lights and Lighting.
- 3 Deselect Automatic Trailer Lamp Check.

Manual check

If the automatic check has been disabled, the check can be started manually.

- 1 Tap Settings in the Top view.
- 2 Tap My Car \rightarrow Lights and Lighting.
- 3 Select Manual Trailer Lamp Check.
- > The light check will begin. Get out of the vehicle to perform the check.

Trailer rear fog light

When a trailer is connected, the vehicle's rear fog light may not illuminate and rear fog light functionality is instead transferred to the trailer. If this is the case, check to see if the trailer is equipped with a rear fog light before activating the vehicle's fog lights when driving with a trailer to help ensure safe operation.

Symbols and messages in the instrument panel

If one or more of the turn signals or brake lights on the trailer is not working, a symbol and message will be displayed in the instrument panel. The other lights on the trailer must be checked manually by the driver before the vehicle is driven.

Symbol	Message
+++ 	 Trailer turn indicator Right turn indicator malfunction Trailer turn indicator Left turn indicator malfunction
	Trailer brake light Malfunction

If any of the trailer's turn signal lights is not working, the turn signal symbol in the instrument panel will also flash more quickly than normal.

* Option/accessory.

12.8. Fuel

12.8.1. Fuel gauge

The fuel gauge in the instrument panel shows the fuel level in the tank.

The illustration is generic - details may vary according to vehicle model.

The beige area in the fuel gauge indicates the amount of fuel left in the tank.

When the fuel level is low, the fuel pump symbol will illuminate with an amber-colored light. The trip computer also indicates the approximate distance that can be driven on the fuel remaining in the tank.

12.8.2. Fuel

Volvo recommends the use of detergent gasoline to control engine deposits.

Deposit control gasoline (gasoline with detergent additives)

Detergent gasoline is effective in keeping injectors and intake valves clean. Consistent use of deposit control gasolines will help ensure good driveability and fuel economy. If you are not sure whether the gasoline contains deposit control additives, check with the service station operator.

(i) Note

Volvo recommends not using external fuel injector cleaning systems, e.g. do not add detergent additives to gasoline before or after refueling.

Unleaded fuel

All Volvo vehicles have a three-way catalytic converter and must only use unleaded gasoline. US and Canadian regulations require that pumps delivering unleaded gasoline are labeled "UNLEADED". Only the nozzles of these pumps will fit in your vehicle's fuel filler inlet. It is unlawful to dispense leaded fuel into a vehicle labeled "unleaded gasoline only". Leaded gasoline damages the three-way catalytic converter and the heated oxygen sensor system. Repeated use of leaded gasoline will lessen the effectiveness of the emission control system and could result in loss of emission warranty coverage. State and local vehicle inspection programs will make detection of misfueling easier, possibly resulting in emission test failure for misfueled vehicles.

(i) Note

Some U.S. and Canadian gasolines contain an octane enhancing additive called methyl-cyclopentadienyl manganese tricarbonyl (MMT). If such fuels are used, your Emission Control System performance may be affected, and the Check Engine Light (malfunction indicator light) located on your instrument panel may light. If this occurs, please return your vehicle to a trained and qualified Volvo service technician for service.

Gasoline containing alcohol and ethers, "Oxygenated fuels"

Some fuel suppliers sell gasoline containing "oxygenates" which are usually alcohols or ethers. In some areas, state or local laws require that the service pump be marked indicating use of alcohols or ethers. However, there are areas in which the pumps are unmarked. If you are not sure whether there is alcohol or ethers in the gasoline you buy, check with the service station operator. To meet seasonal air quality standards, some areas require the use of "oxygenated" fuel.

Volvo permits the use of the following "oxygenated" fuels. However, the specified octane ratings must still be met.

Alcohol - Ethanol

Fuels containing up to 10% ethanol by volume may be used. Ethanol may also be referred to as Ethyl alcohol, or "Gasohol".

Ethers - MTBE/ETBE: Fuels containing up to 22% MTBE/ETBE by volume may be used.

Methanol

Do not use gasolines containing methanol (methyl alcohol, wood alcohol). This practice can result in vehicle performance deterioration and can damage critical parts in the fuel system. Such damage may not be covered under the New Vehicle Limited Warranty.

12.8.3. Octane rating

Volvo requires premium fuel (91 octane^[1] or higher) for all T5, T6 and T8 engines, and recommends AKI 93 for optimal performance and fuel economy. See decal examples in illustrations 1 and 2.

Minimum octane

MINIMUM OCTANE RATING (R + M)/2 METHOD **01**

Illustration 1: Sample fuel pump octane label^[1].

Illustration 2: Decal on the inside of the fuel filler flap on vehicles that require premium fuel^[2].

TOP TIER Detergent Gasoline

Volvo endorses the use of "TOP TIER Detergent Gasoline" where available to help maintain engine performance and reliability. TOP TIER Detergent Gasoline meets a new standard jointly established by leading automotive manufactures to meet the needs of today's advanced engines. Qualifying gasoline retailers (stations) will, in most cases, identify their gasoline as having met the "TOP TIER Detergent Gasoline" standards.

(i) Note

Information about TOP TIER Detergent Gasoline is available at toptiergas.com

(i) Note

When switching to higher octane fuel or changing gasoline brands, it may be necessary to fill the tank more than once before a difference in engine operation is noticeable.

Fuel Formulations

Do not use gasoline that contains lead or manganese as a knock inhibitor, and do not use lead additives. Besides damaging the exhaust emission control systems on your vehicle, lead has been strongly linked to certain forms of cancer.

Many fuels contain benzene as a solvent. Unburned benzene has been strongly linked to certain forms of cancer. If you live in an area where you must fill your own gas tank, take precautions. These may include:

- standing upwind away from the filler nozzle while refueling
- refueling only at gas stations with vapor recovery systems that fully seal the mouth of the filler neck during refueling

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note. 619 / 1010 wearing neoprene gloves while handling a fuel filler nozzle.

Use of Additives

With the exception of gas line antifreeze during winter months, do not add solvents, thickeners, or other store-bought additives to your vehicle's fuel, cooling, or lubricating systems. Overuse may damage your engine, and some of these additives contain organically volatile chemicals. Do not needlessly expose yourself to these chemicals.

Warning

Never carry a cell phone that is switched on while refueling your vehicle. If the phone rings, this may cause a spark that could ignite gasoline fumes, resulting in fire and injury.

Carbon monoxide is a poisonous, colorless, and odorless gas. It is present in all exhaust gases. If you ever smell exhaust fumes inside the vehicle, make sure the passenger compartment is ventilated, and immediately return the vehicle to a trained and qualified Volvo service technician for correction.

Demanding driving

In demanding driving conditions, such as when towing a trailer or driving in hot weather or for prolonged periods at high altitudes, it may be a good idea to switch to a higher-octane fuel (AKI^[1] 91 or higher) or to switch to another brand of gasoline in order to fully utilize the vehicle's engine capacity and optimize traction.

^[1] AKI (Anti Knock Index) is an average value of RON (Research Octane Number) and MON (Motor Octane Number) - (RON)+ (MON)/2

^[2] For supplementary information - see the car's Service and Warranty Booklet.

12.8.4. Emission controls

Three-way catalytic converter

- Keep your engine properly tuned. Certain engine malfunctions, particularly involving the electrical, fuel or distributor Ð ignition systems, may cause unusually high three-way catalytic converter temperatures. Do not continue to operate your vehicle if you detect engine misfire, noticeable loss of power or other unusual operating conditions, such as engine overheating or backfiring. A properly tuned engine will help avoid malfunctions that could damage the three-way catalytic converter.
- Do not park your vehicle over combustible materials, such as grass or leaves, which can come into contact with the hot exhaust system and cause such materials to ignite under certain wind and weather conditions.
- Excessive starter cranking (in excess of one minute), or an intermittently firing or flooded engine can cause three-way catalytic converter or exhaust system overheating.

620 / 1010

Remember that tampering or unauthorized modifications to the engine, the Engine Control Module, or the vehicle may be
illegal and can cause three-way catalytic converter or exhaust system overheating. This includes: altering fuel injection
settings or components, altering emission system components or location or removing components, and/or repeated use
of leaded fuel.

(i) Note

Unleaded fuel is required for vehicles with three-way catalytic converters.

Heated oxygen sensors

The heated oxygen sensors monitor the oxygen content of the exhaust gases. Readings are fed into a control module that continuously monitors engine functions and controls fuel injection. The ratio of fuel to air into the engine is continuously adjusted for efficient combustion to help reduce harmful emissions.

12.9. Refueling

12.9.1. Service stations

You can use the vehicle's navigation system* to find a route to the nearest service station.

While you are stopped to refuel, it can be a good idea to perform a quick inspection of the vehicle, such as checking tire pressure, lights, wiper blades, filling washer fluid, etc.

* Option/accessory.

12.9.2. Fuel tank volume

The fuel tank's refillable volume is shown in the table below.

	All engines
Liter (approx)	48
US gallons (approx)	12.7

12.9.3. Refueling

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note. 621 / 1010 The fuel tank is equipped with a fuel filling system without a cover.

Refueling the vehicle at a service station

It is important to insert the pump's nozzle past both of the two flaps in the fuel filler pipe before beginning fueling.

Instructions for fueling:

1 Turn off the engine and open the fuel filler door.

(i) Note

Refueling must be done within approximately 15 minutes of opening the fuel filler door. After this time, the valve opened by pushing the button for opening the fuel filler door will close and it will no longer be possible to refuel without the pump's nozzle switching off.

If the valve is closed before refueling is complete - press the button again and wait until the driver display shows the message **Fuel tank Ready for refueling**.

- 2 Select a fuel approved for use in the vehicle. For more information on approved fuels, see the section on "Fuel".
- **3** Insert the pump's nozzle into the fuel filler pipe's opening. There are two flaps just inside the fuel filler pipe and the pump's nozzle must push both of these flaps open before fuel can be added.
- **4** Avoid overfilling the tank. Do not press the handle on the filler nozzle again after it has initially stopped pumping.
- > The fuel tank is now filled.

(i) Note

An over-full tank may overflow in hot weather.

() Important

Avoid spilling gasoline during refueling. In addition to causing damage to the environment, gasolines containing alcohol can cause damage to painted surfaces, which may not be covered under the New Vehicle Limited Warranty.

Refueling from a fuel container

When filling from a fuel container, use the funnel provided in a foam block under the floor hatch in the cargo compartment.

- 1 Open the fuel filler door.
- 2 Insert the funnel into the fuel filler pipe's opening. There are two flaps just inside the fuel filler pipe and the tube section of the funnel must push both of these flaps open before fuel can be added.

/ Warning

California Proposition 65

Operating, servicing and maintaining a passenger vehicle can expose you to chemicals including engine exhaust, carbon monoxide, phthalates, and lead, which are known to the State of California to cause cancer and birth defects or other reproductive harm. To minimize exposure, avoid breathing exhaust, do not idle the engine except as necessary, service your vehicle in a well ventilated area and wear gloves or wash your hands frequently when servicing your vehicle. For more information go to www.P65Warnings.ca.gov/passenger-vehicle [https://www.p65warnings.ca.gov/products/passenger-vehicle [https://www.p65warnings.ca.gov/products/passenger-vehicle [https://www.p65warnings.ca.gov/products/passenger-vehicle].

12.9.4. Opening/closing the fuel filler door

A button on the instrument panel is used to unlock the fuel filler door.

An arrow next to the fuel pump symbol in the instrument panel indicates the side of the vehicle on which the fuel filler door is located.

Press the button on the dashboard.

> Pressure equalization in the fuel tank causes a slight delay before the fuel filler door opens. Fuel tank Fuel filler lid open will be displayed in the instrument panel, followed by Fuel tank Ready for refueling. If the gasoline engine is activated when the button is pressed, it will usually be deactivated and the vehicle will switch to electric propulsion.

(i) Note

Refueling must be done within approximately 15 minutes of opening the fuel filler door. After this time, the valve opened by pushing the button for opening the fuel filler door will close and it will no longer be possible to refuel without the pump's nozzle switching off.

If the valve is closed before refueling is complete - press the button again and wait until the driver display shows the message **Fuel tank Ready for refueling**.

2 After refueling, press the fuel filler door lightly to close it.

12.10. Emission control system

12.10.1. Emission controls

Three-way catalytic converter

- Keep your engine properly tuned. Certain engine malfunctions, particularly involving the electrical, fuel or distributor ignition systems, may cause unusually high three-way catalytic converter temperatures. Do not continue to operate your vehicle if you detect engine misfire, noticeable loss of power or other unusual operating conditions, such as engine overheating or backfiring. A properly tuned engine will help avoid malfunctions that could damage the three-way catalytic converter.
- Do not park your vehicle over combustible materials, such as grass or leaves, which can come into contact with the hot exhaust system and cause such materials to ignite under certain wind and weather conditions.
- Excessive starter cranking (in excess of one minute), or an intermittently firing or flooded engine can cause three-way catalytic converter or exhaust system overheating.
- Remember that tampering or unauthorized modifications to the engine, the Engine Control Module, or the vehicle may be illegal and can cause three-way catalytic converter or exhaust system overheating. This includes: altering fuel injection settings or components, altering emission system components or location or removing components, and/or repeated use of leaded fuel.

(i) Note

Unleaded fuel is required for vehicles with three-way catalytic converters.

Heated oxygen sensors

The heated oxygen sensors monitor the oxygen content of the exhaust gases. Readings are fed into a control module that continuously monitors engine functions and controls fuel injection. The ratio of fuel to air into the engine is continuously adjusted for efficient combustion to help reduce harmful emissions.

12.11.1. Charging hybrid battery

12.11.1.1. Charging status in the instrument panel

Charging status is indicated in the instrument panel using both graphics and messages. This information is displayed as long as the instrument panel is active.

Color	Message	Meaning
Flashing blue	Fully charged at: [Time] displayed along with an animated blue pulsing light through the charging cable.	Charging is in progress and the approximate time at which the bat- tery will be fully charged is displayed.
Green	Charging complete is displayed. An image will be superimposed over the graphic of the vehicle with a green LED indicator light in the socket.	The battery is fully charged.
Red	Charging error will be displayed. The LED indicator light in the charging socket will be red.	 Malfunction. Check the charging cable's connection to the vehicle's charging socket and the power source. Then restart charging by following these steps: Unplug the charging cable from the charging socket. Wait a few seconds. Plug the charging cable back into the charging socket. If the problem persists, contact your Volvo retailer.

i Note

If the instrument panel is not used, it will go dark after a period of time. To reactivate the display:

- depress the brake pedal,
- open one of the doors, or
- put the ignition in mode I by pressing the START button and then releasing.

12.11.1.2. Regenerative braking*

The vehicle recovers kinetic energy during braking in order to reduce fuel consumption and emissions.

The battery symbol is shown in the driver display when the car is generating power for the battery.

The function is available in all drive modes together with gear selector position D or B.

Activating brake regeneration

Brake regeneration is activated by gentle pressure on the brake pedal or during engine braking.

Regeneration increases during engine braking if manual gear selector position B is selected.

* Option/accessory.

12.11.1.3. Charging status in the vehicle's charging socket

The LED indicator light in the vehicle's charging socket shows the current charging status. The different colors of the LED indicator light are explained in the table below.

LED indicator light's color	Meaning
White	Courtesy light
Yellow	Wait mode ^[1] – waiting for charging to start.
Flashing green	Charging is in progress ^[2] .
Green	Charging completed ^[3]
Red	 Malfunction. Check the charging cable's connection to the vehicle's charging socket and the power source. Then restart charging by following these steps: Unplug the charging cable from the charging socket. Wait a few seconds. Plug the charging cable back into the charging socket. If the problem persists, contact your Volvo retailer.

^[1] E.g. after a door has been opened or if the charging cable handle is not locked in place.

^[2] The more slowly the light flashes, the closer the battery is to being fully charged.

^[3] The light will go out after a short time.

12.11.1.4. General information about charging cables

A mode 3 charging cable is used when charging at a charging station. Some charging stations have a permanent charging cable that is used instead.

(i) Note

The information in this section applies only to charging using a mode 3 charging cable or charging station with a permanent charging cable.

/! Warning

Only use the charging cable provided with your vehicle or a replacement cable purchased from a Volvo retailer.

Charging with permanent charging cable in accordance with mode 3^[1]

In certain places, the charging cable is permanently installed within a charging station connected to an electrical outlet. You must therefore use the charging station's charging cable and follow the instructions on the charging station.

Specifications, charging cable			
Enclosure class Compliance	IP 67 SAE J1772		
Ambient temperature	-32 ºC to 50 ºC(-25 ºF till 122 ºF)		

/ Warning

- Children should be supervised when in the vicinity of the charging cable when it is plugged in.
- High voltage is present in your electric meter housing and power distribution service panel. Contact with high voltage can cause death or serious personal injury.
- Do not use the charging cable if it is damaged in any way. A damaged or malfunctioning charging cable may only be repaired by a workshop an authorized Volvo workshop is recommended.
- Always position the charging cable so that it will not be driven over, stepped on, tripped over or otherwise damaged, or cause personal injury.
- Never connect adapters of any kind between the charging cable and the vehicle.

Also, refer to the manufacturer's instructions for using the charging cable and its components.

(!) Important

Always interrupt charging first and then disconnect the charging cable – first from the vehicle's charging socket and then from the charging station.

(!) Important

Wipe the charging cable with a clean cloth lightly moistened with water or a mild detergent. Do not use chemicals or solvents.

The charging cable and its components must not be rinsed or immersed in water.

^[1] European standard - EN 61851-1.

12.11.1.5. Residual current device in charging cable

The charging cable^[1] has a circuit breaker that helps protect against current overloads and thermal overheating.

/ Warning

Only charge the vehicle using approved, grounded wall outlets. If the electrical circuit or electrical socket's capacity is not known, let a licensed electrician inspect the electrical circuit's capacity. Using a charge level that exceeds the electrical circuit's or electrical outlet's capacity may start a fire or damage the electrical circuit.

/ Warning

• The charging cable's residual current breaker helps protect the vehicle's charging system but cannot ensure that an current overload will never occur.

Control module's LED^[2] indicator.

If the control module's built-in residual current device is triggered, the LED indicator will light up red. Check the wall outlet. Have the outlet checked by a licensed electrician or try using another wall outlet.

Important

- Check the capacity of the socket.
- Other electronic equipment connected on the same fuse circuit must be disconnected if the total load is exceeded.
- Do not connect the charging cable if the socket is damaged.

^[1] For charging with a mode 2 charging cable.

^[2] LED (Light Emitting Diode)

12.11.1.6. Charging status in the charging cable's control module

The indicator on the charging cable's control module shows the status of ongoing charging, as well as status after completed charging^[1].

Control module's LED^[2] indicator.

1 LED indicator

LED	Status	Meaning	Recommended action
Off	Charging is not possible.	No power supply to the charging cable.	 Unplug the charging cable from the wall outlet. Plug the charging cable back into the wall outlet or use another wall outlet. If the problem persists, contact your Volvo retailer.
White light	Charging possible.	The charging cable is ready to be plugged into the vehicle.	 If the LED indicator is white but charging is not possible: Unplug the charging cable from the charging socket. Plug the charging cable back into the charging socket. If the indicator does not begin flashing white within about 10 seconds, first unplug the charging cable from the charging socket and then unplug it from the wall outlet. Plug the charging cable back into the wall outlet and then plug the charging socket into the vehicle. If the problem persists, contact your Volvo retailer.
Flashing white	Charging is in progress.	The vehicle's electronic system has initiated charging Charging is in progress.	Wait until the vehicle is fully charged.
Steady red light	Charging is not possible.	Temporary error.	 Unplug the charging cable from the charging socket. Wait a few seconds. Plug the charging cable back into the charging socket. If the problem persists, contact your Volvo retailer.
Flashing red light	Charging is not possible.	Serious error.	 Unplug the charging cable from the charging socket and then from the wall outlet. Wait a few seconds. Plug the charging cable back into the wall outlet and then plug the charging socket into the vehicle. If the problem persists, contact your Volvo retailer.

^[1] For charging with a mode 2 charging cable.

^[2] LED (Light Emitting Diode)

12.11.1.7. Charging cable temperature monitoring

To help ensure the vehicle's hybrid battery is reliably charged each time^[1] it is connected, the charging cable's control module and plug have integrated temperature monitoring devices.

The temperature in both the control module and the plug is monitored.

Temperature monitoring in the control module

To help protect the vehicle's electronics, charging is stopped if the temperature in the control module becomes too high. This may occur due to e.g. high ambient temperatures or strong sunlight directly on the control module.

Monitoring in the plug

The charging current is reduced if the temperature in the plug becomes too high. If the temperature exceeds a critical limit, charging is stopped completely.

(!) Important

Avoid exposing the control unit and its plug to direct sunlight. In such cases, the overheating protection in the plug could reduce or cut off charging of the hybrid battery.

(!) Important

If charging is often inadvertently interrupted, the charging cable and the vehicle's charging system should be checked by a trained and qualified Volvo service technician. The wall outlet should also be checked by a licensed electrician.

^[1] For charging with a mode 2 charging cable.

12.11.1.8. Hybrid vehicle charging via wall outlet

If no other charging options are available, the vehicle can also be charged via a wall outlet.

(i) Note

The information in this section applies to charging via a wall outlet and a mode 2 charging cable.

Charging cable (mode 2)

When charging via a wall outlet, use a charging cable with a control module that can limit the amperage (mode 2).

/! Warning

Only use the charging cable provided with your vehicle or a replacement cable purchased from a Volvo retailer.

/ Warning

The charging cable and its components must not be rinsed or immersed in water.

- The charging cable must be grounded when in use. It is equipped with a cord with a grounding conductor and a grounding plug. The plug must be inserted into an appropriate outlet that is properly installed and grounded in accordance with all local codes and ordinances and is not damaged in any way.
- Children should be supervised when in the vicinity of the charging cable when it is plugged in.
- High voltage is present in your electric meter housing and power distribution service panel. Contact with high voltage can cause death or serious personal injury.
- Do not use the charging cable if it is damaged in any way. A damaged or malfunctioning charging cable may only be repaired by a workshop an authorized Volvo workshop is recommended.
- Always position the charging cable so that it will not be driven over, stepped on, tripped over or otherwise damaged, or cause personal injury.
- Disconnect the charger from the wall outlet before cleaning it.
- Never connect the charging cable to an extension cord or a multiple plug socket.
- Do not use one or more adapters between the charging cable and the electric outlet.
- Never connect adapters of any kind between the charging cable and the vehicle.
- Do not use an external timer between the charging cable and the electrical outlet.

Also, refer to the manufacturer's instructions for using the charging cable and its components.

Starting charging

Plug the charging cable into a 120/240 V outlet. Open the charger door. Note that the ignition must be switched off completely before charging. Remove the charging handle's protective cover and push the handle all the way into the vehicle's socket.

The charging cable handle will lock into place and charging will begin within 5 seconds

(i) Note

Read more about how charging is started in the Hybrid vehicle charging section.

(!) Important

If the power capacity of the wall outlet's fuse is too low, the fuse could blow while the vehicle is charging. Contact a qualified electrician for further investigation.

/! Warning

- The hybrid battery must only be charged at maximum permitted charging current or lower in accordance with applicable local and national recommendations for hybrid charging from wall outlets/plugs.
- Only charge the hybrid battery from approved, grounded wall outlets.
- Avoid visibly worn or damaged electrical outlets since they may lead to fire damage and/or personal injury if used.

(!) Important

Never connect the charging cable if there is a risk of a thunderstorm or there is lightning.

Stopping charging

To stop charging of the hybrid battery, unlock the vehicle, unplug the charging cable from the vehicle's charging socket and then unplug the cable from the 120/240 V outlet.

(i) Note

Read more about how charging is stopped in the Stopping hybrid vehicle charging section.

(!) Important

Before the charging cable is removed from the vehicle's charging socket, the vehicle must be unlocked using the unlock button on the key. This must be done even if the vehicle's doors are already unlocked. If the vehicle is not unlocked using the unlock button, the charging cable or system may be damaged.

(!) Important

- Never unplug the charging cable from the wall outlet while charging is in progress the wall outlet could be damaged in such circumstances.
- Always unlock the vehicle so that charging is cut off before unplugging the charging cable from the wall outlet.
- Note that the charging cable must be disconnected from the vehicle's charging socket before it is disconnected from the wall outlet, partly to prevent damage to the system and party to prevent unintentional interruption of charging.

Fuse

Charging a hybrid battery via a wall outlet corresponds to a high load on the fuse.

(!) Important

Make sure that the fuse to the wall outlet can handle the current specified for the charging cable.

There are normally several 120/240 V power consumers in one fuse circuit, which means that more than one power consumer (e.g. lighting, vacuum cleaner, electric drill, etc.) may use the same fuse.

(!) Important

Make sure that the 120/240 V outlet has sufficient amperage for charging electric vehicles. If you are uncertain of the capacity, have the outlet checked by a licensed electrician.

12.11.1.9. Hybrid vehicle charging

You can charge the vehicle at a home charging station or a public charging station^[1].

Starting charging

- 1 Remove the charging cable from the charging station's storage socket or take out your charging cable. Note that the ignition must be switched off completely before charging.
- **2** Plug the charging cable into the charging station. If the charging station has a permanent charging cable, go to step 3.

Press the rear edge of the charger door to open the charging $\mathsf{socket}^{[2]}$.

Remove the charging handle's protective cover and push the charging handle all the way into the vehicle's socket.

(! Important

To prevent paintwork damage, e.g. in strong winds, position the protective cover of the charging handle so that it does not touch the vehicle.

- **5** The charging cable handle will lock into place and charging will begin within 5 seconds.
- When charging starts, the green LED light in the charging socket will begin to flash. The approximate remaining charging time or the charging status will be displayed in the instrument panel.

During charging, condensation from the air conditioning may form under the vehicle. This is normal and is caused by the hybrid battery cooling.

/ Warning

- Children should be supervised when in the vicinity of the charging cable when it is plugged in.
- High voltage is present in your electric meter housing and power distribution service panel. Contact with high voltage can cause death or serious personal injury.
- Do not use the charging cable if it is damaged in any way. A damaged or malfunctioning charging cable may only be repaired by a workshop an authorized Volvo workshop is recommended.
- Always position the charging cable so that it will not be driven over, stepped on, tripped over or otherwise damaged, or cause personal injury.
- Never connect adapters of any kind between the charging cable and the vehicle.

Also, refer to the manufacturer's instructions for using the charging cable and its components.

(!) Important

Do not wash the vehicle while the charging cable is plugged in or the charging door is open.

^[1] Applies to charging using a mode-3 charging cable or charging station with a permanent charging cable.

^[2] The illustration is generic - details may vary according to model.

12.11.1.10. Stopping hybrid vehicle charging

To stop charging^[1], unlock the vehicle, unplug the charging cable from the vehicle's charging socket and then unplug the cable from the charging station.

1 Use the key^[2] to unlock the vehicle. Charging stops.

() Important

Always interrupt charging first and then disconnect the charging cable – first from the vehicle's charging socket and then from the charging station.

Press the release button on the charging cable's handle. The handle will be released/unlocked. Unplug the cable from the vehicle's charging socket and close the charger door.

3 Remove the charging cable from the charging station, or plug the permanent charging cable into the charging station's storage socket.

(!) Important

Always unlock the vehicle so that charging is stopped before unplugging the charging cable. Note that the charging cable must be disconnected from the vehicle's charging socket before it is disconnected from the charging station, partly to prevent damage to the system and party to prevent unintentional interruption of charging.

Charging cable automatically locks

If the charging cable is not removed from the charging socket, it will automatically lock back into place a short time after unlocking. The charging cable can be removed again if the vehicle is unlocked using the key. For vehicles with keyless locking and unlocking* it is possible to lock and unlock with the handle again.

- ^[1] Applies to charging using a mode-3 charging cable or charging station with a permanent charging cable.
- ^[2] Unlocking to stop charging must be done regardless of whether the vehicle is locked or unlocked
- * Option/accessory.

12.11.1.11. Charging time

The following charging times are approximate and apply when charging is not affected by current being drawn from the climate system or any other function. If charging seems to be taking more time than shown in the table, this should be investigated.

Charging time (single-phase charging)

Charging times for charging with 200-240 V			
Amperage (A) ^[1]	Charging output (kW) ^[2]	Charging time (hours)	
6	1,3	8	
10	2.2	5	
16	3.6	3	

Charging times for charging with 100-120 V			
Amperage (A) ^[1]	Charging output (kW) ^[2]	Charging time (hours)	
6	0.7	17	
10	1.1	10	
16	1.8	6	

(i) Note

- Charging output and charging time may vary depending on voltage level and other loads connected on the same circuit.
- The maximum charging output for the hybrid is 3.6 kW, even when using a charging station with a higher output than 3.6 kW.

(i) Note

In extremely cold or hot weather, part of the charging current is used to heat/cool the hybrid battery, resulting in a longer charging time.

^[1] Maximum charging current may vary from market to market.

^[2] The highest charging output that the vehicle can achieve is 3.6 kW.

12.11.2. Hybrid battery gauge

The hybrid battery gauge shows how much current is left in the hybrid battery.

The current in the hybrid battery is used to power the electric motor, but can also be used to heat or cool the vehicle. The trip computer calculates an approximate driving distance with the remaining current in the hybrid battery.

Symbols in the hybrid battery gauge

The **f** symbol in the hybrid battery gauge indicates that the Hold function is activated. The **f** symbol indicates that the Charge function is activated.

12.11.3. Hybrid gauge

In Hybrid and Pure drive modes, the instrument panel will display a hybrid gauge, which can help the driver achieve optimal driving economy.

The hybrid gauge shows the ratio between the electric motor's current power consumption and the remaining available power. This information is shown in various ways.

Symbols in the hybrid gauge

Indicates the current available power from the electric motor. A solid symbol indicates that the electric motor is being used.

A hollow symbol indicates that the electric motor is not being used.

Indicates the power level when the internal combustion engine starts. A solid symbol indicates that the internal combustion engine is being used.

Indicates the power level when the internal combustion engine will start. A hollow symbol indicates that the internal combustion engine is not being used.

Indicates that the hybrid battery is being charged e.g. by lightly pressing the brake pedal.

Driver-requested power

The hybrid gauge displays the amount of power requested (utilized) by the driver through pressure on the accelerator pedal. The higher the reading on the scale, the more power utilized in the current gear. The mark between the lightning symbol and the drop symbol indicates the point at which the combustion engine will start.

The vehicle has been started, but is stationary and no power is being requested.

The electric motor cannot supply the requested power and the internal combustion engine will start.

The vehicle is generating current to recharge the battery, e.g. during light braking or engine braking on a downslope.

12.11.4. Drive systems

The vehicle combines a gasoline engine with an electric motor.

Two drive systems

Depending on the selected drive mode and power available in the electric motor, the drive systems can either be used separately or in tandem.

The electric motor gets its energy from a hybrid battery located under the tunnel console. The hybrid can be charged from a wall outlet or in a special charging station.

Both the combustion engine and the electric motor can generate power directly to the wheels. An advanced control system coordinates both the drive systems to help optimize driving economy.

- **1** Hybrid battery The hybrid battery's function is to store electrical current. This current is provided by plugging the charging cable into an electrical outlet or through regenerative braking. This provides current to power the electric motor and to temporarily power the electrical air conditioning to precondition the passenger compartment.
- 2 Combustion engine The combustion engine starts when the charge level in the hybrid battery is too low to provide the power output requested by the driver.
- 🕄 Super capacitor Supplies current to start the vehicle, which saves current in the regular 12 V battery.
- 4 Electric motor Powers the vehicle using electricity. Can provide extra torque and power during acceleration. Regenerates braking energy into electrical current.

12.11.5. Hold and Charge

In certain situations, it can be useful to control the hybrid battery's charge level while driving. This is possible with the **Hold** and **Charge** functions.

Hold and Charge are available in all drive modes. The functions will switch off if Pure drive mode is activated.

Activating Hold and Charge

The functions can be activated in the center display's Function view.

Hold

Battery level sustained for later use.

This function retains the charge in the hybrid battery for the electric motor and saves available electrical current for use at a later time, such as when driving in an urban area.

The vehicle will function as in normal hybrid driving with a discharged battery - in addition to reusing energy from e.g. regenerative braking, the combustion engine will be used more frequently to maintain the charge in the battery.

(i) Note

The battery level can be affected when using **Hold** if, for example, the vehicle is heavily loaded, has equipment connected to the towbar or drives up a long hill.

Charge

Engine charges hybrid battery.

This function charges the hybrid battery with the help of the combustion engine for increased use of the electric motor at a later time.

Symbols in the instrument panel

The fi symbol is displayed in the hybrid battery gauge when Hold is activated.

The **5** symbol is displayed in the hybrid battery gauge when Charge is activated.

12.11.6. Drive modes

Drive modes affect the vehicle's driving characteristics in different ways to enhance and simplify the driving experience in certain types of situations.

Drive modes enable easy access to the vehicle's many functions and settings in different driving situations. Each drive mode is adapted to help optimize driving characteristics.

- Steering
- Engine/transmission
- Brakes
- Shock absorbers
- Instrument panel
- Climate control settings

Select the drive mode that is adapted to the current driving conditions. Keep in mind that not all drive modes are available in all situations.

Available drive modes

V Warning

Please be aware that there is no sound from the engine when the vehicle is being powered by the electric motor and it may be difficult to detect by children, pedestrians, cyclists and animals. This is particularly true at low speeds e.g. in parking lots.

✓ Warning

Do not leave the vehicle in an unventilated area with a drive mode activated and the combustion engine switched off. The engine will start automatically if the charge level in the hybrid battery is low and the resulting exhaust gases can be very harmful to people and animals.

Hybrid

This is the default mode in which the electric motor and combustion engine work together.

The vehicle starts in **Hybrid** mode. The control system uses both the electric motor and the gasoline engine – separately or in tandem – and adapts utilization with regard to performance, fuel consumption and comfort. Driving capacity on the electric motor alone is determined by factors such as the hybrid battery's charge level, the need for heat or cooling in the passenger compartment, etc.

If there is sufficient charge in the battery, it is possible to drive solely on electric power. When the accelerator pedal is pressed, only the electric motor will be activated until the battery reaches a certain charge level. Above this level, the current in the battery cannot supply the power requested by the accelerator pedal and the combustion engine will start.

When the hybrid battery's charge level is low, the combustion engine will start more frequently to save the remaining current in the battery. Charge the hybrid battery from a 120-240 volt outlet using a charging cable, or activate Charge in Function view to reset the option of only using the electric motor.

This drive mode is designed for low energy consumption with a mix between the electric motor and gasoline engine, without compromising on climate comfort or driving experience. When faster acceleration is requested by the driver, the electric driveline will be utilized to help provide maximum additional power.

Information in the instrument panel

When driving in Hybrid mode, a hybrid gauge will be displayed in the instrument panel. The gauge will indicate the amount of electrical current required when the driver depresses the accelerator pedal. The marker between the lightning and the drop shows how much current is available.

The instrument panel gauge when both the electric motor and the combustion engine are being used.

The instrument panel also shows how much current is being restored to the battery (regenerated) during light braking.

Pure

Uses the electric motor only, with the lowest possible energy consumption and carbon dioxide emissions.

This drive mode prioritizes the use of the hybrid battery. Certain climate system functions are reduced to provide the longest distance using only electricity.

Pure mode is available as long as the hybrid battery has a high enough charge level and available power, which can be affected by temperature. When the gasoline engine starts, the vehicle automatically switches to Hybrid mode until it is possible for the driver to select Pure mode again.

The gasoline engine starts:

- if the battery's charge level is too low
- if the driver presses the accelerator pedal all the way down.

Pure mode is not available:

if the battery's charge level is too low

- if the vehicle's speed exceeds 140 km/h (87 mph) (does not apply on downhill gradients, etc.)
- if factors such as cold weather affect the system or components.

(i) Note

The combustion engine may start temporarily in certain situations when **Pure** drive mode is used. This is to provide the wheels with the desired torque in driving situations that require higher loads, such as when towing a trailer or driving up a hill.

This drive mode is adapted for the longest possible driving distance with electric propulsion and is primarily intended for use in city driving. **Pure** helps provide the lowest possible consumption even when the hybrid battery is fully discharged.

ECO Climate

In Pure mode, ECO climate is automatically activated in the passenger compartment to help reduce energy consumption.

(i) Note

When the **Pure** drive mode is activated, settings for certain climate system and electricity consuming functions are reduced. Some of these settings can be reset manually, but full functionality will only be restored by leaving **Pure** mode or adapting the **Individual** drive mode to full climate system functionality.

If condensation forms on the windows, tap the max defroster button, which will function normally.

Power

• The vehicle gets sportier driving characteristics and a faster acceleration response.

This drive mode adapts the combined power from the gasoline engine and the electric motor. Gear shifting will be faster and more distinct and the transmission will prioritize gears with a higher traction force. Steering response is faster and suspension is stiffer.

This drive mode is adapted for optimal performance and response during acceleration. It changes the throttle response, gear shifting program and turbo boost system. Chassis settings and steering and brake response are also optimized. The **Power** drive mode is always available regardless of the hybrid battery's charge status.

Power mode is also available in a Polestar Engineered* version.

Individual

Customizes drive mode to personal preferences.

Select one of the drive modes as a basis and adjust the settings to achieve your preferred driving characteristics. These settings will be stored in your driver profile.

Individual drive mode is only available if it has been activated in the center display.

Settings view^[1] for Individual drive mode.

1 Tap Settings in the Top view.

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note. 647 / 1010

- 2 Tap My Car \rightarrow Individual Drive Mode and select Individual Drive Mode.
- 3 Under Presets, select one of the following drive modes as a basis: Pure, Hybrid, Power or Polestar Engineered*. The following settings can be modified:
 - Driver Display
 - Steering Force
 - Powertrain Characteristics
 - Brake Characteristics
 - Suspension Control
 - ECO Climate

Using the electric or combustion engine

An advanced control system determines the distance that the vehicle can be driven on the combustion engine, electric motor, or both at the same time.

Its primary function is to use the motor/engine and the current available in the hybrid battery as efficiently as possible based on the characteristics of the various drive modes and the power output requested by the driver by pressing the accelerator pedal.

In certain cases, temporary limitations in the system or mandatory functions to help maintain a low overall emissions level may result in greater use of the combustion engine.

* Option/accessory.

^[1] The illustration is generic - details may vary according to vehicle model.

12.11.7. General information about electric vehicles

The vehicle is equipped with a rechargeable hybrid battery^[1]. The electric motor powers the vehicle primarily at low speeds; the gasoline engine is used at higher speeds or during more active driving.
Charging the hybrid battery

The hybrid battery is recharged using the charging cable. It can also be recharged during light braking and through engine braking in gear position B. The combustion engine can also help recharge the hybrid battery. The vehicle's start battery is charged when the hybrid battery is charged.

The hybrid battery's charging time depends on the amperage used.

While driving

The instrument panel shows charging information, selected drive mode, distance to discharged battery, and the hybrid battery's charge level.

Different drive modes can be selected while driving, e.g. electric power only or, if more power is needed, a combination of electric and gasoline power. The vehicle calculates a combination of driveability, driving experience, environmental impact and fuel economy for the selected drive mode.

Effect of temperature

The hybrid battery with associated electrical drive system as well as gasoline engine and its drive system, work better when they are at the correct operating temperature.

If the hybrid battery's temperature is below -10 °C (14 °F) or above 40 °C (104 °F), some of the vehicle's functions may be reduced or not available at all.

The electric motor cannot be used if the battery's temperature is too low or too high.

Important

(i) Note

The capacity of the hybrid battery diminishes somewhat with age and use, which could result in increased use of the gasoline engine and consequently, slightly higher fuel consumption.

/ Warning

California Proposition 65

Operating, servicing and maintaining a passenger vehicle can expose you to chemicals including engine exhaust, carbon monoxide, phthalates, and lead, which are known to the State of California to cause cancer and birth defects or other reproductive harm. To minimize exposure, avoid breathing exhaust, do not idle the engine except as necessary, service your vehicle in a well ventilated area and wear gloves or wash your hands frequently when servicing your vehicle. For more information go to www.P65Warnings.ca.gov/passenger-vehicle [https://www.p65warnings.ca.gov/products/passenger-vehicle [https://www.p65warnings.ca.gov/products/passenger-vehicle [https://www.p65warnings.ca.gov/products/passenger-vehicle].

/ Warning

Charging the vehicle can affect the function of an implanted pacemaker or other medical equipment. People with an implanted pacemaker are recommended to consult a doctor before starting charging.

/ Warning

If the hybrid battery needs to be replaced, this may only be done by a Volvo retailer or authorized Volvo workshop.

Exterior engine noise

(i) Note

Because there is no sound from the engine when only the electric motor is running, the vehicle is equipped with artificial exterior background noise at low speeds and when reversing. This warning sound is intended to help warn children, pedestrians, cyclists, animals, etc. outside the vehicle of the vehicle's approach.

High-voltage electrical current

/! Warning

The hybrid electrical system in your vehicle uses high voltage electrical current. Any damage to this system or to the hybrid battery may result in the danger of overheating, fire, or serious injury. If the vehicle is involved in a collision or subjected to flooding, fire, etc., have it inspected by a trained and qualified Volvo service technician. Prior to this inspection, the vehicle should be parked outdoors at a safe distance from any building or potentially flammable materials.

/ Warning

A number of electrical components in the vehicle use high-voltage current and can be extremely dangerous if handled incorrectly. These components and any orange wiring in the vehicle may only be handled by trained and qualified Volvo service technicians.

Do not touch anything that is not clearly described in this Owner's Manual.

^[1] Lithium-ion.

12.11.8. Hybrid symbols and messages in the instrument panel

A number of symbols and messages relating to hybrid operation may be displayed in the instrument panel. They may also appear in combination with general indicator and warning symbols and disappear when the necessary action has been taken.

Symbol	Message	Meaning
+	12 V Battery Charging fault, service ur- gent. Drive to workshop	Fault in 12 V battery. Contact a workshop ^[1] to have the battery checked as soon as possible.
	12 V Battery Charging fault Stop safely	Fault in 12 V battery. Stop the vehicle as soon as possible and contact a workshop ^[1] to have the battery checked.
	12 V Battery Fuse failure Service required	Fault in 12 V battery. Contact a workshop ^[1] to have the system checked as soon as possible.
	HV battery Overheated, stop safely	The hybrid battery's temperature seems to be rising at an abnormal rate. Stop the vehicle and turn off the engine. Wait at least 5 minutes before driving. Call a workshop ^[1] or inspect the vehicle to make sure everything seems normal before continuing to drive.
	Reduced performance Max vehicle speed limited	The hybrid battery's charge level is too low for driving at high speeds. Charge the battery as soon as possible.
	Propulsion system Harsh behavior at low speed, vehicle ok to use	The hybrid system is not functioning properly. Contact a workshop ^[1] to have the system checked as soon as possible.
	Hybrid system failure Service required	The hybrid system is not functioning. Contact a workshop ^[1] to have the system checked as soon as possible.
ද ට	Charge cable Remove before start	Displayed when the driver attempts to start the vehicle with the charging cable still connected. Remove the charging cable and close the charger cover.

^[1] An authorized Volvo workshop is recommended.

12.11.9. Long-term storage of vehicles with hybrid batteries

To help minimize the risk of damage to the hybrid battery during long-term storage (longer than 1 month), it is recommended that the charge level be kept at about 25%. Regularly check the charge level in the instrument panel.

Preparing for long-term storage

The recommended charge level for long-term storage is about 25%.

- If the charge level is high drive the vehicle until it reaches the recommended level.
- If the charge level is low charge the vehicle to the recommended level.

During long-term storage

Regularly check the charge level in the instrument panel.

Charge the vehicle if the charge level has dropped significantly or if it hasn't been charged in over 6 months. This compensates for the battery's natural self-discharge.

(i) Note

Store the vehicle in a cool place and avoid extreme temperatures during long-term storage to minimize the risk of damage to the battery. Choose a storage area indoors or in shade, depending on where the temperature is lowest, especially in warm climates.

12.11.10. Range in electric mode

A number of factors can affect vehicle range. The ability to achieve a long driving range varies according to the outside conditions and to how the vehicle is driven.

The certified value for the vehicle's range should not be considered an expected driving range. The certified value is obtained during special test cycles and is primarily intended to be used for comparisons between different vehicles.

652 / 1010

Range in the instrument panel

When the vehicle leaves the factory, or after a factory reset, range is based on the certified value.

Once the vehicle has been driven for a while, range is instead based on historical driving patterns. The amount of history used depends on the battery's charge level. The lower the charge level of the hybrid battery, the more quickly the range adapts to changed driving patterns.

Factors affecting driving range

There are a number of other factors in addition to historical trip data that affect range. The longest range is achieved under very favorable conditions when all factors positively influence range.

Factors affecting range include:

- speed
- climate control settings
- topography
- preconditioning
- tires and tire pressure
- the current traffic situation
- temperature and weather
- road conditions.

Range based on speed and ambient temperature

1 20 °C (68 °F) ambient temperature and passenger compartment climate control off.

20 °C (68 °F) ambient temperature and passenger compartment climate control on.

3 35 °C (95 °F) ambient temperature and passenger compartment climate control on.

4 -10 °C (14 °F) ambient temperature and passenger compartment climate control on.

The graph shows the approximate relationship between constant speed and driving range. Driving at a lower constant speed helps increase the electric motor's driving range.

Higher ambient temperature and deactivated climate system are also more favorable for range.

12.11.11. Economical driving

To achieve the longest possible driving range, the driver should plan the trip and adapt driving style and speed to the current situation.

Before driving

- Whenever possible, precondition the vehicle before driving by connecting the charging cable to an electrical outlet.
- If preconditioning is not possible when it is cold outside, use seat and steering wheel heating first. Avoid heating the entire passenger compartment to reduce the amount of current being taken from the hybrid battery.
- The type of tires and inflation pressure used could affect energy consumption consult an authorized Volvo retailer for advice on suitable tires.
- Remove unnecessary items from the vehicle the heavier the load, the higher the fuel consumption.

While driving

- Activate Pure drive mode.
- Activate the Hold function at high speeds when traveling farther than is possible using the hybrid battery's capacity.
- Whenever possible, avoid using the Charge function to charge the hybrid battery.
- Maintain a steady speed and a generous following distance to traffic ahead to minimize braking.

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note. 654 / 1010

- When braking, the hybrid battery is charged by braking lightly using the brake pedal.
- Higher speeds increase energy consumption because air resistance increases with speed.
- In a cold climate, reduce heating of the windshield/rear window, mirrors, seats and the steering wheel. Ð
- Avoid driving with the windows open. Ð
- Do not use the accelerator pedal to keep the vehicle stationary on an uphill gradient. Instead, activate the auto-hold brake function at a standstill.
- If possible, turn off the climate system when driving shorter distances after preconditioning.

After driving

If possible, park in a climate-controlled garage with vehicle charging outlets or stations.

12.11.12. Recycling of batteries

Batteries must be recycled in an environmentally sound manner at the end of their service life.

Consult a workshop if you are uncertain of how to dispose of this type of waste - an authorized Volvo workshop is recommended. Only authorized workshop personnel may handle hybrid batteries.

12.11.13. Hybrid battery

The hybrid battery powers the vehicle's electric motor and is charged via the vehicle's charging socket.

The vehicle cannot be started if the hybrid battery is discharged.

If both the starter battery and the hybrid battery are discharged, both batteries must be charged. In this situation, it is not possible to first charge only the hybrid battery. The starter battery must have a certain charge level in order for the hybrid battery to be charged.

Warning

Hybrid battery replacement may only be performed by a workshop – an authorized Volvo workshop is recommended.

Hybrid battery service life and capacity

The capacity of the hybrid battery decreases with age and use, which could result in increased use of the combustion engine and thereby higher fuel consumption and reduced electric motor range.

655 / 1010

Coolant

The hybrid battery's cooling system has its own expansion tank.

(!) Important

Filling the hybrid battery coolant should only be performed by a workshop – an authorized Volvo workshop is recommended.

Specifications for hybrid battery

Type: Lithium-ion

Power reserve: 10.7 kWh

12.12. HomeLink

12.12.1. HomeLink[®] * ^[1]

 $\mathsf{HomeLink}^{\otimes [2]}$ is a programmable remote control integrated in the vehicle's electrical system.

It can remotely control up to three different devices, such as garage door openers or alarm systems, and thereby replace the remote controls for these.

The illustration is generic - the design may vary.

1 Programmable buttons

2 Indicator light

HomeLink[®] is integrated in the rearview mirror and consists of three programmable buttons and an indicator light in the mirror.

(i) Note

Save the original remote controls for future reprogramming (e.g. for use in another vehicle).

It is also advisable to delete the button programming if the vehicle is sold.

More information

Visit homelink.com or call 1-800-355-3515.

* Option/accessory.

- ^[1] Certain markets only.
- ^[2] HomeLink and the HomeLink house symbol are registered trademarks of Gentex Corporation.

12.12.2. Using HomeLink[®] * ^[1]

Once HomeLink[®] is programmed, it can be used instead of the separate remote controls.

Press and hold the programming button. The garage door, gate, alarm system, etc. will be activated (this may take several seconds). If the button is held down for more than 20 seconds, reprogramming will begin. The indicator light will glow steadily or flash when the button has been pressed. The original remote controls may be used concurrently with HomeLink[®] if desired.

657 / 1010

(i) Note

When the ignition is switched off, HomeLink $^{\circ}$ will be active for at least 7 minutes.

(i) Note

HomeLink[®] cannot be used if the vehicle is locked and the alarm is armed * from the outside.

/ Warning

- If you use HomeLink[®] to open a garage door or gate, be sure no one is near the gate or door while it is in motion.
- Do not use HomeLink[®] with any garage door opener that lacks safety stop and reverse features as required by U.S. federal safety standards (this includes any garage door opener model manufactured before April 1, 1982). A garage door that cannot detect an object signaling the door to stop and reverse does not meet current U.S. federal safety standards. For more information, contact HomeLink at: <u>homelink.com</u>.

* Option/accessory.

^[1] Certain markets only.

12.12.3. Programming HomeLink[®]*^[1]

Program HomeLink[®], reset programming or reprogram individual buttons.

Programming

- 1 Point the remote control at the HomeLink[®] button to be programmed and hold it about 2-8 cm (1-3 inches) from the button. Do not obstruct the HomeLink[®] indicator light.
- 2 Press and hold both the remote control button and the HomeLink[®] button to be programmed.
- **3** Do not release the buttons until the indicator light has stopped flashing slowly (about once a second) and either flashes quickly (about 10 times a second) or glows steadily.
- If the indicator light glows steadily: Indication that programming is complete.
 Press the programmed button twice to activate.
 If the indicator light flashes quickly: The device being programmed with HomeLink[®] may have a security function that requires an extra step.

Try pressing the programmed button twice to see whether the programming works. Otherwise, continue with the following steps.

Locate the "training" button^[2] on the receiver for the e.g. garage door opener. It is usually located near the antenna bracket on the receiver.

5 Press and release the "training" button once.

Programming must be completed within 30 seconds after pressing the button.

- 6 Press and release the HomeLink[®] button to be programmed. Repeat the press/hold/release sequence a second time. For some receivers, the sequence may need to be repeated a third time.
- > Programming is complete.

(i) Note

Some remote controls are more effective at programming HomeLink[®] from a distance of about 15-20 cm (6-12 inches).

Programming individual buttons

- Press and hold the desired button for about 20 seconds. 1
- 2 When the indicator light on HomeLink[®] starts flashing slowly, it is possible to program as usual.

(i) Note

If the button you are reprogramming does not program with a new device, it will return to the previously saved programming.

Resetting the HomeLink[®] buttons

It is only possible to reset all HomeLink[®] buttons at once. Individual buttons can only be reprogrammed.

- Press and hold the outer buttons on HomeLink[®] for about 10 seconds. 1
- > When the indicator light goes from a steady glow to flashing, the buttons have been reset and are ready for reprogramming.

Problems programming

Visit homelink.com or call 1-800-355-3515.

- * Option/accessory.
- ^[1] Certain markets only.
- ^[2] The name and color of the button varies depending on the manufacturer.

12.12.4. Type approval for HomeLink[®] * ^[1]

Type approval for HomeLink[®] is provided below.

Country/Area	Type approval
USA and Canada	This device complies with FCC rules part 15 and Industry Canada RSS-210. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) This device must accept any interference that may be received including interference that may cause undesired operation.
Europe	Gentex Corporation hereby declares that HomeLink [®] Model UAHL5 complies with the Radio equipment directive 2014/53/EU.
	Wavelengths within which the radio equipment operates:
	• 433.05MHz-434.79MHz <10mW E.R.P.
	• 868.00MHz-868.60MHz <25mW E.R.P.
	• 868.70MHz-868.20MHz <25mW E.R.P.
	• 869.40MHz-869.65MHz <25mW E.R.P.
	• 869.70MHz-870.00MHz < 25mW E.R.P.
	Certificate holder address: Gentex Corporation, 600 North Centennial Street, Zeeland MI 49464, USA

Warning

The transmitter has been tested and complies with FCC and IC rules. Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the device.^[2]

* Option/accessory.

^[1] Certain markets only.

^[2] The term "IC:" before the certification/registration number only signifies that Industry Canada technical specifications were met.

12.13. Compass

12.13.1. Compass*

An integrated compass^[1] in the upper right corner of the rearview mirror shows the direction the vehicle is traveling.

Rearview mirror with compass.

Eight different compass directions are shown with the abbreviations:

- N north
- NE northeast
- E east
- SE southeast
- S south
- SW southwest
- W west
- NW northwest
- * Option/accessory.

^[1] Rearview mirror with compass is available as an option only on certain markets and models.

12.13.2. Activating and deactivating the compass*

An integrated compass^[1] in the upper right corner of the rearview mirror shows the direction the vehicle is traveling.

The compass is automatically activated when the vehicle is started.

Activating or deactivating the compass manually

- Use a paper clip or similar object to press the button on the bottom of the mirror. 1
- > If the compass is deactivated when the vehicle is switched off, it will not be activated the next time the vehicle is started. The compass will then need to be activated manually.

* Option/accessory.

^[1] Rearview mirror with compass is available as an option only on certain markets and models.

12.13.3. Calibrating the compass*

The globe is divided into 15 magnetic zones. The compass^[1] should be calibrated if the vehicle is driven from one zone to another.

- Stop the vehicle in a large, open area away from steel constructions and high-voltage power lines. 1
- Start the engine and switch off all electrical equipment (climate system, wipers, etc.) and make sure all doors are closed. 2

(i) Note

Calibration may fail or not even be initiated if electrical equipment is not turned off.

3 Hold the button on the bottom of the rearview mirror pressed for about 3 seconds (using e.g. a paper clip). The number of the current magnetic zone is shown.

Magnetic zones.

Press the button on the underside of the mirror repeatedly until the desired magnetic zone (1–15) appears (see the map of magnetic zones).

- 5 Wait until the display again shows C, or press and hold the button on the underside of the rearview mirror for approx.6 seconds until C is displayed.
- 6 Drive slowly in a circle at a speed of no more than 10 km/h (6 mph) until a compass direction is shown in the display. This indicates that calibration is complete. Drive in a circle two more times to fine-tune the calibration.
- **7** Vehicles with heated windshields *: If C is shown in the display when the windshield heating function is activated, perform step 6 above with the heating function on.
- 8 Repeat the above procedure as needed.
- * Option/accessory.
- ^[1] Rearview mirror with compass is available as an option only on certain markets and models.

12.14. Towing

12.14.1. Towing using a towline

This section refers to one vehicle being towed behind another using a towline.

$(\,!\,)$ Important

Never attempt to tow the vehicle behind another vehicle as this could damage the electric motor. The vehicle must instead be lifted onto a tow truck and transported with all four wheels on the bed or lifting platform of the truck (no wheels may touch the road).

(!) Important

Never tow the vehicle with the front wheels touching the road, as this will damage the electric motor. Instead, tow the vehicle with the front wheels on a dolly, or transport the vehicle on a tow truck with all four wheels raised on the bed of the truck.

Towing another vehicle

Before towing another vehicle, check applicable speed limit regulations.

Jump starting

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note. 663 / 1010 Never attempt to tow the vehicle to start the engine, as this could damage the electric motor. Use an auxiliary battery if the start battery's charge level is so low that the engine cannot be started.

(!) Important

Attempts to tow-start the vehicle could cause damage to the electrical drive motor and three-way catalytic converter.

12.14.2. Attaching and removing the towing eyelet

Use the towing eyelet when towing. Screw the towing eyelet securely into place in the threaded outlet behind the cover on the right-hand side of the front and rear bumpers.

Attaching the towing eyelet

1

Take out the towing eyelet, which is stored in a foam block under the floor in the cargo compartment.

2

Front: Remove the cover by pressing the cover.

> The cover turns along its center line and can then be removed.

2

Rear: Remove the cover by placing a coin, key or similar at the mark and prying out the cover.

- > Fold out the cover completely and remove.
- **4** Screw the towing eyelet in as far as possible.

Fasten the eyelet securing by, for example, inserting a lug wrench * through it and using this as a lever.

() Important

It is important that the towing eye is screwed in securely as far as possible.

Removing the towing eyelet

1 Unscrew the towing eyelet after use and return it to the foam block.

Replace the cover on the bumper.

* Option/accessory.

12.14.3. Recovery

This section refers to transporting the vehicle with a tow truck or similar vehicle.

Call a professional towing service for assistance.

In certain conditions, the towing eyelet can be used to pull the vehicle onto a flatbed tow truck.

(!) Important

Note that the vehicle must always be towed raised with all wheels on the tow truck.

The vehicle's location and ground clearance determine if it can be lifted onto a tow truck. If the incline of the tow truck is too steep or if the ground clearance under the vehicle is insufficient, attempting to pull it up may result in damage. In this case, the vehicle should only be lifted with the tow truck's lifting equipment.

Warning

No person or object should be behind the tow truck when the vehicle is lifted onto the bed of the truck.

12.14.4. Safety mode

Safety mode is a feature that is triggered after a collision if there is potential damage to an important function in the vehicle, such as the fuel lines, sensors for one of the safety systems, the brake system, etc.

If the vehicle has been involved in a collision, the text Safety mode See Owner's manual may appear in the instrument panel along with the warning symbol if the panel is undamaged and the vehicle's electrical system is intact. The message indicates that one or more of the vehicle's functions may be reduced.

/!\ Warning

Never attempt to restart the vehicle if you smell fuel fumes when the message Safety mode See Owner's manual is displayed in the instrument panel. Leave the vehicle immediately.

If safety mode has been set, it may be possible to reset the system in order to start and move the vehicle a short distance, for example, if it is blocking traffic.

Warning

Never attempt to perform repairs or reset electrical components on your own after the vehicle has been in safety mode. This could result in injury or prevent the vehicle from functioning properly. Volvo recommends having the vehicle inspected and reset to normal operating status by an authorized Volvo workshop after Safety mode See Owner's manual has been displayed.

666 / 1010

When the vehicle is in safety mode, it should not be towed behind another vehicle. It should be towed from the site on a tow truck. Volvo recommends towing the vehicle directly to an authorized Volvo workshop.

12.14.5. Starting and moving the vehicle when it is in safety mode

If safety mode has been set, it may be possible to reset the system in order to start and move the vehicle a short distance, for example, if it is blocking traffic.

Resetting and starting the vehicle when it is in safety mode

1 Check the vehicle for damage, particularly for fuel leakage. Make sure you do not detect any gasoline fumes.

If the damage to the vehicle is minor and there is no fuel leakage/fumes, you may attempt to start the engine.

/ Warning

Never attempt to restart the vehicle if you smell fuel fumes when the message **Safety mode See Owner's manual** is displayed in the instrument panel. Leave the vehicle immediately.

2 Switch off the ignition.

- 3 Then try to start the vehicle.
- The vehicle's electrical system will perform a system check and then attempt to reset to normal operating mode. The message Vehicle start System check, wait will be displayed on the instrument panel during the check. This may take up to a minute.
- 4 When Vehicle start System check, wait is no longer displayed in the instrument panel, try again to start the vehicle.

() Important

If the message **Safety mode See Owner's manual** is still displayed, the vehicle should not be driven or towed behind another vehicle. If the vehicle needs to be moved, it must be towed on a tow truck. Even if no damage is apparent, there may be hidden damage that could make the vehicle impossible to control.

Moving the vehicle when it is in safety mode

- 1 If the message Normal mode The car is now in normal mode is displayed after attempting to start the engine, the vehicle may be moved carefully from its present position if, for example, it is blocking traffic.
- **2** Do not move the vehicle farther than absolutely necessary.

<u>/i</u>/ Warning

When the vehicle is in safety mode, it should not be towed behind another vehicle. It should be towed from the site on a tow truck. Volvo recommends towing the vehicle directly to an authorized Volvo workshop.

13.1. Radio

13.1.1. HD Radio

13.1.1.1. HD Radio™

HD Radio is a brand name registered by the DTS, Inc.^[1]. They are the developer of a broadcasting technology called IBOC or In Band On Channel, which refers to the method of transmitting a digital radio broadcast signal centered on the same frequency as the FM station's present frequency.

Introduction

Display when the radio is receiving an HD Radio broadcast (generic illustration)

HD Radio volume may fade in and out at times due to coverage limitations.

The IBOC system is referred to as a "hybrid" since it is both analog and digital. During hybrid operation, receivers still continue to receive the analog (non-digital) signal. HD Radio receivers incorporate both modes of reception, where the receiver will automatically switch to the analog signal if the digital signal cannot be decoded or is lost by the receiver.

When you have tuned to an HD Radio station, the \mathbb{W} symbol will appear in the infotainment system display. The symbol will be displayed in different colors:

669 / 1010

- Grayed-out symbol: no HD Radio broadcast reception
- White symbol: the radio is actively receiving an HD broadcast
- Orange symbol: the radio is receiving an HD broadcast with digital sound

More information about HD Radio and IBOC can be found on DTS, Inc.'s website, www.dts.com.

Artist Experience[™]

A radio station's logo and album art can be displayed. If a station opts to provide this information, it is broadcast once every 12 minutes, which means that there may be a delay before the logo/album art appear on the screen. The radio can store 100 station logos so the next time the radio is tuned to the same station, the logo will be displayed immediately. Album art is synched with the artist that you are currently listening to.

Ball game mode

This feature means that a main FM station (HD1) will broadcast live events, where the content of the programming is more important than sound quality, in analog mode only to help prevent the delay between analog and digital broadcasting. The HD Radio symbol will be white during live broadcasts and "Live" will be displayed next to the symbol.

Benefits of digital broadcasting

- Better sound (FM sounds near CD quality).
- Some FM frequencies offer a greater number of listening choices through multicasting (consisting of a frequency's main channel and any sub-channels that may also be available on that particular frequency.)
- When receiving a digital signal there is no multipath disturbance or hisses/pops/crackling due to outside influences.

How HD Radio [™] Technology broadcasting works

HD Radio works similarly to conventional radio and broadcasts of this type are available in many areas of the United States. However, there are a few key differences:

- Instead of transmitting one analogue signal, stations send out a bundled signal both analog and digital.
- An HD Radio receiver can receive both digital and analog broadcasts. Depending on the terrain and location of the vehicle (which will influence the signal strength), the receiver will determine which signal to receive.

^[1] HD Radio[™] technology is manufactured under license from DTS, Inc. U.S. and Foreign Patents. HD Radio[™] and the HD and HD Radio logos are proprietary trademarks of DTS.

13.1.1.2. HD Radio[™] sub-channels

In many cases, a main HD Radio station (FM wavebands only) will also have sub-channels offering additional types of programming or music.

670 / 1010

Sub-channels

Example of an HD Radio station with sub-channels

If any sub-channels are available, they will listed below the main channel on the screen. In this example, WILD-FM HD2 is a sub-channel.

Selecting sub-channels

To listen to a station's sub-channel(s), tap the station on the screen or press the forward/back arrow keys on the right-side steering wheel keypad or below the screen.

Sub-channels can also be saved as radio favorites.

If you tap a sub-channel favorite, it may take up to **6 seconds** before the channel becomes audible. If you tap a station while you are out of digital range of the transmitter, **No reception** will be displayed.

13.1.1.3. Activating and deactivating the HD Radio[™]

HD Radio is deactivated when the car leaves the factory.

When listening to an HD Radio station and driving through areas with weak HD signals (fringe areas), you may experience that the radio repeatedly switches between analog/digital and digital/analog reception. If this happens, it may be desirable to switch HD off.

Carry out the following to activate or deactivate HD Radio:

- 1 Drag down the top view and tap on **Settings**.
- 2 Press Media and FM Radio.
- 3 Press HD Radio FM to activate/deactivate the function.

If HD radio is deactivated, the radio will be unable to receive digital broadcasts but it will continue to function as a conventional radio (analog FM receiver). Please note that when HD is switched off, it will not be possible to tune in to sub-channels.

13.1.1.4. HD Radio[™] limitations

Limitations

- Main channel vs. sub-channels (FM only): The main channel is the only channel that can receive in hybrid mode (both digital and analog). If a frequency has sub-channels, they are broadcast in digital mode only. The main FM channel will be displayed as, for example, "WRIF-FM HD1". The sub-FM channels will be displayed as "WRIF-FM HD2", "WRIF-FM HD3", etc.
- **Reception coverage area**: Due to current IBOC transmitter power limitations, the reception coverage area in digital mode is somewhat more limited than the station's analog coverage area. Be aware that, like all radio transmission technology, terrain, time of day, vegetation and buildings can have a positive or negative effect on radio reception.
- Analog to digital/digital to analog blending: Analog to digital blending will occur as the signal strength reaches a preset threshold in the receiver. This will be noticeable in fringe areas (areas with weak reception) and is normal.

(i) Note

There may be a noticeable difference in sound quality when a change from analogue to digital or digital to analogue occurs, such as:

- Volume increase or decrease
- Equalizer settings, i.e., Bass/ Midrange/Treble cut or boost
- Time alignment (Digital program material in extreme cases can be as much as 8 seconds behind the analogue). This will noticeable as a "stuttering" effect.

The above items are dependant on the broadcaster's equipment settings and do not indicate a fault in the vehicle's radio receiver or antenna systems.

13.1.2. Sirius XM satellite radio

13.1.2.1. SiriusXM[®] Satellite radio*

The SiriusXM[®] Satellite system broadcasts from of a number of high elevation satellites in geosynchronous orbit.

Listening to satellite radio

The digital signals from the satellites are line-of-sight, which means that physical obstructions such as bridges, tunnels, etc, may temporarily interfere with signal reception.

672 / 1010

Avoid any obstructions, such as metallic objects transported on roof racks or in a ski box, or other antennas that may impede signals from the SiriusXM[®] satellites.

Selecting SiriusXM[®] Satellite radio mode

1 From the center display's Home view, swipe from right to left to come to App view.

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note. 674 / 1010 If there is no subscription activated, tap channel 1, where you will be prompted on the screen to phone SiriusXM[®].

If a cell phone is paired and connected to the vehicle, you can also subscribe by:

- 1 From Home view, pull down the Settings menu.
- **2** Open the settings menu for SiriusXM[®] Satellite radio.
- 3 Tap Unsubscribed Services.
- **4** To call SiriusXM[®], enter the phone number. They will activate the subscription of your choice. This may take several minutes.

When the subscription has been activated, tap the SiriusXM[®] Satellite radio icon to start the function and display the channel list included in your subscription.

* Option/accessory.

13.1.2.2. Using SiriusXM[®] Satellite radio*

SiriusXM[®] Satellite radio offers several features for finding and listening to music, news, sporting events, etc. being broadcast on satellite radio stations.

SiriusXM[®] Satellite radio functions

With SiriusXM[®] Satellite radio activated, tap Library to display a screen offering the following functions:

- Search (the magnifying glass icon)
- Channels

- Favorites
- Categories

If you have used this view previously, you will be returned to the most recently used one.

Search

Tap the magnifying glass to display a screen where you can enter text using the center display's keyboard or by writing in the free-text field to search for e.g., a station number, an artist, song title, etc.

Channels

Tap to display a complete list of the channels included in your subscription. Tap a channel name to listen. If a subscription to a channel has expired, its name will be grayed-out on the screen.

For quick access to a channel that you often listen to, tap the star to the right of the channel's name. It will then be added to your list of favorites.

Favorites

Tap to display the channels that you have added to this list. Tap a channel name to listen.

Categories/Genres

Tap to display the categories available. Tap a category or genre name to display the channels that it contains and then tap a channel to listen.

If you have activated alerts (see the "Alerts" section below) and an alert is activated for an artist, song or team, temporary virtual categories will also be created and displayed. The channels currently broadcasting the song, artist or broadcasting a program with the selected team will be listed in a virtual category.

EPG (Electronic Program Guide)

On the center display's Home view, tap **EPG** for information about e.g., when a program is being broadcast and its name, description, artist, etc. If no information is currently available, **No information** will be displayed.

Alerts

If this feature has been selected under SiriusXM Settings, the Alerts button will be displayed on the Home view.

To add e.g. an artist's name, song title or a sports team to the list of alerts:

- 1 Tune to a channel that is broadcasting a song, game, etc., of your choice.
- 2 Tap the Alerts button.
- **3** A pop-up window will be displayed showing a list of alerts (nothing will be displayed if the selected channel does not support the alert function).
- **4** Select one of the alternatives in list (only one can be selected at a time).

- 5 The song/artist/team will now be added to the list of alerts. Favorite sports teams can also be added to the list using "Game Alert" in the SiriusXM satellite radio settings.
- > When your choice is being broadcast on a channel, you will be informed by a pop-up.

iTunes tagging

From the center display's Top view, tap SiriusXM Settings. Tap the iTunes Tagging menu. Tap the iTunes Tagging box to activate/deactivate this function and tap Close to return to Home view. Tap Tags List to display a list of all tagged songs.

If the function is activated, the **iTunes tag** button will be displayed in Home view. If a song is played that you would like to buy in the iTunes store, tap this button while the song is playing to tag it. If a song with **iTunes Tagging** information is available, the button will be selectable. Tap the button to tag the song. If you would like to buy a tagged song via iTunes, Tap the iTunes tag button.

To buy a song in iTunes, begin by connecting an iPhone/iPod/iPad to the USB port in the tunnel console. The iTunes tagging list will automatically be transferred to the device and removed from the list in the vehicle. If the device is connected when a song is tagged, the data will automatically be saved in the device. To purchase the song, consult the iTunes support page.

* Option/accessory.

13.1.2.3. Settings for SiriusXM[®] Satellite radio*

There are numerous settings that can be made to enhance your SiriusXM[®] Satellite radio listening experience.

Settings

Drag down the top view and tap on Settings \rightarrow Media \rightarrow SiriusXM. The following alternatives will be displayed:

Traffic Jump

Tap to display a list of cities from which you can choose to get traffic/weather information (or **Traffic jump off** to deactivate the feature). Tap to select a city (**JUMP** will be displayed on the Home screen next to **Library**). Tap **Back** to return to the list of set-

tings or Close to return to the Home screen.

From the Home screen, tap **JUMP** to activate the function. When traffic/weather information is available from the selected city, the radio will automatically tune to the channel providing the information. When the information/announcement is finished, the radio will automatically return to the channel that you were previously listening to.

During an announcement, tap JUMP to interrupt the message and return to the station that you were currently listening to.

Alert Notifications

Tap the box to activate/deactivate. When activated, you will be notified if a song, artist, etc. that you have selected is playing. You will be asked if you want to listen.

Alert Notifications Sound

Opt to receive an audible alert when one of your selected choices is being played.

Sort Channels

Select how to sort your channels list.

iTunes Tagging

Tap to display a menu with the options: iTunes Tagging and Tags List. With this feature activated, songs can be tagged for later purchase from the iTunes store.

Game Alerts

Tap to display a list of sports.

Tap a sport to display a list of teams and tap a box on the right side of the screen to select a team as a favorite. An alert will then be provided when information about the team is being broadcast.

Tap Confirm below the list to return to the list of sports.

Tap Back to return to the list of settings or Close to return to the main screen.

Unsubscribed Services

If you have a SiriusXM[®] Satellite radio subscription, any channels not included in the subscription will be listed here. Call SiriusXM[™] to subscribe. The phone number will be shown on the screen. If a cell phone is paired and connected to the vehicle, tap the phone number to make the call.

Skipped Stations

Tap to display a list of channels that you would like to skip (hide). Hide channels from the channel list by tapping the boxes to the right of the screen. Skipped (hidden) channels will not be shown in the channel list. However, a channel previously selected as a favorite will still be displayed in the list of favorites, even it has been added to the skip list.

Skipped Categories

Tap to display a list of categories. Tap a category to skip (hide) it. It will not be displayed in the list of categories.

* Option/accessory.

13.1.2.4. SiriusXM Travel Link[®]*

SiriusXM Travel Link is a subscription feature offered by SiriusXM[®] satellite radio * that can provide information about e.g., weather forecasts, weather alerts, service stations, sports, etc. in the vicinity of the vehicle.

Starting SiriusXM Travel Link

(i) Note

SiriusXM Travel Link services are only available in vehicles equipped with the Sensus Navigation system.

From the center display's App view, tap **Travel Link** to activate the feature. A disclaimer text will be displayed. Tap **OK** to display a list of SiriusXM Travel Link services:

- Alerts
- Fuel
- Sports
- Weather
- Favorites

In order to use one or more of these services, the user has to subscribe to the ones desired.

To subscribe to a SiriusXM Travel Link service:

- 1 Open the center display's Top view.
- 2 Tap Settings.
- 3 Tap Media.
- 4 Press SiriusXM Travel Link and Subscription Status.
- > To subscribe, call the phone number listed on the screen.

Any services not subscribed will be grayed out and contain the text Service not subscribed.

When the services have been activated (subscribed), tap the one of your choice to start it.

The following applies for all of the SiriusXM Travel Link services:

- Pressing the Back button will take you back to the previous screen
- Pressing the Close button will take you to the SiriusXM Travel Link home screen.

(i) Note

If the **Close** button is used to return to the **SiriusXM Travel Link** home screen, the following applies (the **Weather** service is used here as an example):

- If you have already used the Weather function, tapping Weather again in the SiriusXM Travel Link home screen before using any other SiriusXM Travel Link service will return you to the point where you left the Weather service.
- If another **SiriusXM Travel Link** service is used (e.g., **Fuel**, **Sports**, etc.) before you return to the **Weather** service, you will be returned to the default **Weather** view (in this case, **Local**).

The same principle applies to all of the SiriusXM Travel Link services.

Favorites

Many SiriusXM Travel Link selections can be saved for easy access as favorites by tapping the "star" icon next to the selection where applicable.

To display a list of your stored selections, tap the Favorites application in the SiriusXM Travel Link home screen.

* Option/accessory.

13.1.2.5. SiriusXM Travel Link[®]* – Fuel

This SiriusXM Travel Link service provides information and guidance to service stations near the vehicle providing the type of fuel that you prefer/require for your vehicle.^[1]

From the SiriusXM Travel Link home screen, to show fuel information:

1 Tap the Fuel button to display the main fuel screen.

The following categories are shown:

- Search (the magnifying glass icon)
- Nearby
- Recommended
- Favorites
- Brands

Tap one of the alternatives to display its screen.

(i) Note

In each of the categories listed, tapping the **Select fuel type** button near the bottom of the screen opens a sub-view where you can specify the type of fuel preferred/required (**Regular**, **Midrange**, **Premium**, **Diesel**, **Electric 120V**, etc.) Tap **Done** to return to the previous screen.

Search

Tap the magnifying glass icon. If the function is supported in the current context, a keyboard will appear on the screen. Enter the text of your choice and tap **Search** for detailed information if available.

Nearby

Tap for a list of service stations in the vicinity of the vehicle, with the nearest station at the top of the list.

The following information will be provided where available:

- For vehicles using gasoline, the price information for regular gasoline (unless another grade/type of fuel has been selected in Select fuel type)
- For electric vehicles/hybrids, information about charging stations, showing the total number of charging ports and the number of ports currently not in use
- The distance to the station
- A star icon to set the service station as a favorite

Tap the name of a service station to display more detailed information.

For guidance to the service station, tap the **Start navigation** or **Add as waypoint** buttons. See the Sensus Navigation* supplement for additional information about using the navigation system.

Recommended

Tap for a list of service stations near the vehicle, displayed according to the price of regular gasoline (unless another grade/type of fuel has been selected in **Select fuel type**) or of stations offering the greatest number of available charging ports for electric vehicles/hybrids. The station offering the lowest price/most available charging ports will be displayed at the top of the list. Tap the name of a service station to display more detailed information.

Favorites

Tap for a list of service stations that have been stored as favorites. Tap the name of a service station to display more detailed information.

In addition to the **Select fuel type** button at the bottom of the screen, tap the **Edit** button to delete individual stations from the list or tap **Delete** to clear the list. Tap **Done** to return to the previous screen.

Brands

- 1 Tap Brands to display a list of service station brands in the area.
- 2 Tap a brand to display a list of service stations affiliated with that brand (BP, Exxon, etc.).
- **3** Tap the name of a service station to display more detailed information.

In addition to the **Select fuel type** button at the bottom of the screen, tap the **Sort** button to arrange the list according to **Nearest or Cheapest/Recommended.** Tap **Done** to return to the previous screen.

* Option/accessory.

^[1] This service is not available in Canada.

13.1.2.6. SiriusXM Travel Link[®] * – Sports

This SiriusXM Travel Link service provides information about sporting events, tournaments, teams, leagues, etc.

From the SiriusXM Travel Link home screen, to display sports information:

1 Tap the **Sports** button to display the main sports screen.

A number of sports categories will be listed (Football, Baseball, Basketball, etc.)

Tap a sport to select a league in that sport (NFL, MLB, etc.) or a sport organization (PGA, LPGA, etc.).

The following is an example of the result of tapping Baseball:

- 1 MLB (Major League Baseball) will be displayed.
- 2 Tap MLB to display the two leagues in Major League Baseball (American League or National League).
- **3** Tap one of the league names to display the divisions in the league.
- **4** Tap one of the divisions to display:
 - In progress: play-by-play information about a match/game/tournament currently in progress. Continue tapping to display. In the detailed view, you can also select a radio station that is currently broadcasting an ongoing sporting event
 - Headlines for MLB: tap to display brief headline information
 - Scheduled: schedules for coming matches, games, etc.
 - Scores: match/game results

The same principle applies to all sports.

* Option/accessory.

13.1.2.7. SiriusXM Travel Link[®] * – Notifications

This SiriusXM Travel Link service provides notifications of potential weather problems or other emergency situations in the vicinity of the vehicle.

From the SiriusXM Travel Link home screen, to show notifications:

- 1 Tap the Alerts button to display this screen.
- If any notifications are currently available, a message will appear at the top of the screen. They can also be listed from the **Settings** menu in the center display's Top view.
- If no notifications are available, **No active alerts** will be displayed.

Types of notifications

To select the types of notifications to be displayed:

- 1 From the Alerts screen, tap the Select alerts button at the bottom of the screen.
- 2 This displays the types of notifications that can be displayed. Tap the box to the right of each type of notification to select/deselect it.
- **3** Tap **Done** when you have made your selections. You will return to the **Alerts** screen.

Information about a notification

If any notifications have been displayed on the screen, tap one for more detailed information (i.e., the location of the weather problem on a map and a description of the situation).

If a phone number is available in a notification, a Call button will be displayed. Tap this button for additional information.

* Option/accessory.

13.1.2.8. SiriusXM Travel Link[®] * – Weather

This SiriusXM Travel Link service provides weather-related information near the vehicle, at a local ski resort, etc.

From the SiriusXM Travel Link home screen, to display weather-related information:

1 Tap the Weather button to display this screen.

At the top of the screen, the following categories will be displayed:

• Search (the magnifying glass icon)
- Local
- Ski condition
- Areas
- Favorites

Tap the category of your choice.

Search

Tap the magnifying glass icon. If the function is supported in the current context, a keyboard will appear on the screen. Enter the text of your choice and tap **Search** for detailed information from the SiriusXM Travel Link database.

Local^[1]

Information from the closest weather station will be displayed and the following alternatives are available:

- Map view
- Today
- 5 days

Map view

Tap the map to display it in full-screen mode. Tap **Back** to return to the original map view.

Tap Map options to display the following alternatives.

- Weather radar
- Storm attributes
- Surface features
- Tropical storm tracks
- Winds

Tap the relevant box to the right of the option to select/deselect it. Tap **Done** to confirm and return to the previous screen or **Cancel**.

Today

Tap to see the current temperature, or the temperature in 3/6 hours.

Tap Back to return to the Local screen or Close to return to the SiriusXM Travel Link home screen.

5 days

Tap to see weather information for the coming 5 days.

Tap Back to return to the Local screen or Close to return to the SiriusXM Travel Link home screen.

Ski condition

Tap to display a list of ski areas in the vicinity of the vehicle. Tap a name in the list for information such as if the ski area is open/closed, temperature, wind conditions, snow conditions, the number of lifts that are in operation, etc.

- Weather locations
- Ski location

Tap Map view to display a map and a weather legend.

Tap Map options to display the following alternatives.

- Weather radar
- Storm attributes
- Surface features
- Tropical storm tracks
- Winds

Tap the relevant box to the right of the option to select/deselect it. Tap **Done** to confirm and return to the previous screen or **Cancel**.

Areas

Tap Areas to display a list of areas/locations in states from the SiriusXM Travel Link database.

Scroll to a state and tap to display:

- Weather locations: tap arrow to the right to display a list of towns. Scroll to desired town and tap for detailed weather information. You can choose Map view, today, 5 days or Favorites (star)
- Ski locations: tap arrow at right to display local ski areas. Tap an area for detailed info.

For information about storing a location, state, town, etc. as a favorite, see the heading "Favorites" in the article "SiriusXM Travel Link."

* Option/accessory.

^[1] This is the weather default unless another alternative has been selected.

13.1.3. Voice control for radio and media

Voice control commands for the radio and media player are shown below^[1].

Tap 🕪 and say one of the following commands:

- "Media" initiates a dialog for media and radio and displays examples of commands.
- "Play [artist]" plays music by the selected artist.
- "Play [song title]" plays the selected song.
- "Play [song title] from [album]" plays the selected song from the selected album.
- "Play [radio station]" starts the selected radio station.
- "Tune to [frequency]" tunes to the selected radio frequency in the currently active waveband. If no radio source is active, the FM band will be started as default.
- "Tune to [frequency] [waveband]" tunes to the selected radio frequency on the selected waveband.
- "Radio" starts FM radio.
- "Radio FM" starts FM radio.
- "SiriusXM" starts SiriusXM radio*
- "USB" starts playback from USB.
- "iPod" starts playback from iPod.
- "Bluetooth" starts playback from a Bluetooth-connected media source.
- "Similar music" plays music from a USB-connected device with music similar to that currently playing.

(i) Note

Not all system languages support voice control. If a language supports voice control, it is marked with a & symbol in the list of available system languages. Read more about where the information is found in the section on voice control settings.

^[1] Certain markets only.

* Option/accessory.

13.1.4. Radio

The radio can receive broadcasting from the FM waveband with HD Radio[™] Technology and SiriusXM[®] Satellite radio *. When the vehicle has an Internet connection, it is also possible to listen to web radio.

The radio can be controlled using voice control, the right-side steering wheel keypad or the center display.

* Option/accessory.

13.1.5. Starting the radio

The radio is started from the center display's App view.

1 Open the desired waveband (e.g. FM) from App view.

² Select a radio station.

13.1.6. Changing waveband and radio station

Instructions for changing wavebands, waveband lists and radio stations in the selected list are provided here.

Changing wavebands

Swipe from App view on the center display and select the desired waveband (e.g. FM) or open the App menu in the instrument panel with the right-side steering wheel keypad and make your selection there.

Changing a list in a waveband

- 1 Tap Library.
- 2 Select playback from Stations, Favorites or Genres.
- **3** Tap the desired station in the list.

Favorites – only plays selected favorite channels.

Genres - only plays channels broadcasting the selected genre or program type, e.g. pop, classical, etc.

Changing radio stations in a selected list

- 1 Press KC or \triangleright under the center display or on the right-side steering wheel keypad.
- > Move step-by-step through the selected list.

It is also possible to change radio station in the selected list via the center display.

13.1.7. Searching for a radio station

The radio automatically compiles a list of the radio stations that are sending out the strongest signals in the vehicle's current location.

Searching is performed in different ways depending on the waveband selected:

- FM, stations, genres and frequency.
 - 1 Tap Library.
 - 2 Tap 🔾.
 - > Search view will displayed and the keyboard will open.
 - 3 Enter a search word/phrase.
 - > The search will start and change as characters are entered. Search results will be displayed by category.

Searching for a station manually

Searching manually makes it possible to find and tune to stations that are not on the automatically compiled list of the strongest stations in the area.

1 Tap Manual tuning, drag the control or tap K or ▷▷. Press and hold to skip to the next available station in the frequency band. You can also use the right-side steering wheel keypad.

13.1.8. Radio settings

There are a number of different radio functions that can be activated and deactivated.

Canceling a traffic message

A current broadcast (e.g. a traffic message) can be temporarily interrupted by pressing () in the right-side steering wheel keypad or tapping **Cancel** in the center display.

Activating and deactivating radio functions

Pull down Top view and select Settings $\ {}_{\rightarrow}$ Media and the desired waveband to see available functions.

FM Radio

- HD Radio FM: HD Radio[™] Technology: makes it possible to achieve a sound quality comparable with a CD.
- Show Broadcast Information: shows information on program content, artists, etc.
- Freeze Program Name: select to stop the program service name from scrolling continuously. Instead it freezes after 20 seconds.

SiriusXM[®] Satellite radio*

Pull down Top view and select Settings \rightarrow Media \rightarrow SiriusXM to show a list of available options.

* Option/accessory.

13.1.9. RBDS

RBDS radio

RBDS (Radio Broadcast Data System) enables certain functionality^[1], such as:

- Searches for program types or new broadcasts
- Text information about currently broadcast programs

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note. 692 / 1010

13.1.10. Storing radio channels in the Radio favorites app

It is possible to add a radio station in the **Radio favorites** app and in the list of favorites for the waveband (e.g. FM). Instructions for adding and removing radio channels are provided below.

Radio favorites

Radio

The radio favorites app shows stored radio channels from all wavebands.

- 1 Open the Radio favorites app from App view.
- 2 Tap the desired station in the list to listen.

Adding and deleting radio favorites

- 1 Tap \precsim to add a radio channel to the waveband's list of favorites or the Radio favorites app.
- 2 Tap Library, select Edit and tap 🟛 to delete a radio channel from the list of favorites.

When you delete a radio channel from the Radio favorites app, the channel will also be deleted from that waveband's list of favorites.

13.2. Media player

13.2.1. Video

13.2.1.1. Video

The media player can play videos from USB-connected devices.

Video is not available when the vehicle is moving; only audio will be played. Video will resume when the vehicle is stationary.

Information on compatible media formats is provided in a separate section.

13.2.1.2. Playing video

The USB app in App view is used to play videos.

- 1 Connecting media source (USB device).
- 2 Open the USB app from App view.
- 3 Tap the title you would like to play.
- > Playback will begin.

If the USB device also contains music and audio tracks, it may be difficult to locate the video files. To find them, go to Library and select the video tab.

13.2.1.3. Playing DivX®

The DivX Certified[®] device must be registered to play purchased DivX video-on-demand (VOD) movies.

- 1 Tap Settings in the Top view.
- 2 Tap Video \rightarrow DivX[®] VOD to get a registration code.
- 3 Go to vod.divx.com for more information and to complete the registration process.

13.2.1.4. Video settings

You can change some language settings for video playback.

Audio Language and Subtitle Language can be adjusted with the video player in full-screen mode or by opening Top view and tapping Settings \rightarrow Media \rightarrow Video.

13.2.2. Streaming media via Bluetooth[®]

The vehicle's media player is equipped with Bluetooth and can play audio files from Bluetooth-enabled external devices such as cellular phones and tablets.

In order for the media player to be able to wirelessly play audio files from an external device, the device must be connected to the vehicle via Bluetooth.

13.2.3. Connecting a device via Bluetooth[®]

Connect a Bluetooth[®] device to the vehicle to wirelessly play media and give the vehicle an Internet connection if it is available.

Many cellular phones on the market currently offer wireless Bluetooth[®] technology, but not all phones are fully compatible with the vehicle.

The procedure for connecting a media device is the same as for connecting a cellular phone to the vehicle via Bluetooth[®][1].

(i) Note

For some phones, the phone's Bluetooth volume must be manually set to 100% for the audio volume in the vehicle to be sufficiently high. This setting needs to be adjusted for each connected phone. The setting is adjusted separately for phone calls and media streaming. The system will then remember the setting and it will not need to be repeated the next time the phone is connected.

^[1] Note that the new device must be connected and set up for playing media in order for Bluetooth playback to work.

13.2.4. Voice control for radio and media

Voice control commands for the radio and media player are shown below^[1].

Tap 🕪 and say one of the following commands:

- "Media" initiates a dialog for media and radio and displays examples of commands.
- "Play [artist]" plays music by the selected artist.
- "Play [song title]" plays the selected song.
- "Play [song title] from [album]" plays the selected song from the selected album.
- "Play [radio station]" starts the selected radio station.
- "Tune to [frequency]" tunes to the selected radio frequency in the currently active waveband. If no radio source is active, the FM band will be started as default.
- "Tune to [frequency] [waveband]" tunes to the selected radio frequency on the selected waveband.
- "Radio" starts FM radio.
- "Radio FM" starts FM radio.
- "SiriusXM" starts SiriusXM radio*
- "USB" starts playback from USB.
- "iPod" starts playback from iPod.
- "Bluetooth" starts playback from a Bluetooth-connected media source.
- "Similar music" plays music from a USB-connected device with music similar to that currently playing.

(i) Note

Not all system languages support voice control. If a language supports voice control, it is marked with a & symbol in the list of available system languages. Read more about where the information is found in the section on voice control settings.

^[1] Certain markets only.

* Option/accessory.

13.2.5. Media player

The media player can play audio from external audio sources connected via USB port or Bluetooth. It can also play video format via the USB port.

When the vehicle is connected to the Internet, it is also possible to listen to web radio, audio books and to access music services via apps.

The media player is controlled from the center display. Several functions can also be controlled using voice control or the right-side steering wheel keypad.

The radio, which is also handled by the media player, is described in a separate section.

13.2.6. Playing media

The media player is controlled from the center display. Several other functions can also be controlled using the right-side steering wheel keypad or by using voice control.

The radio can also be controlled in the media player. See the section describing the radio.

Starting a media source

App view. (Generic illustration; basic apps vary depending on market and model).

- 1 Inset a USB flash drive.
- 2 Open the USB app from App view.
- 3 Select the track you would like to play.
- > Playback will begin.

MP3 player and iPod[®]

(i) Note

To start playback from an iPod, the iPod app must be used (not USB).

When an iPod is used as source, the car's audio and media system has a menu structure similar to the iPod player's own menu structure.

- 1 Connect a media source.
- 2 Start playback in the connected media source.
- 3 Open the app (iPod, USB) from App view.
- > Playback will begin.

Bluetooth-connected device

- 1 Activate Bluetooth in the media source.
- **2** Connect a media source^[1].
- 3 Start playback in the connected media source.
- 4 Open the Bluetooth app from App view.
- > Playback will begin.

(i) Note

For some phones, the phone's Bluetooth volume must be manually set to 100% for the audio volume in the vehicle to be sufficiently high. This setting needs to be adjusted for each connected phone. The setting is adjusted separately for phone calls and media streaming. The system will then remember the setting and it will not need to be repeated the next time the phone is connected.

Media with Internet connection

Medial playback from apps with Internet connection:

- 1 Connect the vehicle to the Internet.
- **2** Open the app from the App view.
- > Playback will begin.

Read the separate section on how to download apps.

Video

- 1 Connect a media source.
- 2 Open the USB app from App view.
- 3 Tap the title you would like to play.
- > Playback will begin.

Apple CarPlay

CarPlay is described in a separate section.

Android Auto

Android Auto is described in a separate section.

^[1] Note that the new device must be connected and set up for playing media in order for Bluetooth playback to work.

13.2.7. Controlling and changing media

Media playback can be controlled using voice control, the steering wheel keypad or the center display.

The media player can be controlled using voice control, the right-side steering wheel keypad or the center display.

Image: device

Nov playing

O0:29

O0:29

O0:29

O0:29

Volume - turn the knob under the center display or tap
on the right-side steering wheel keypad to raise or lower the volume.

Play/pause - tap the image for the track you would like to play, or press the button below the center display or O on the right-side steering wheel keypad.

Changing track/song - tap the desired track in the center display, or press KA or DD below the center display or on the rightside steering wheel keypad.

Rewinding/fast-forwarding - tap the time axis in the center display and drag it sideways, or press and hold KC or DD below the center display or on the right-side steering wheel keypad.

Changing media source - select from among previous sources in the app, tap the desired app in App view or use the right-side steering wheel keypad to select the app in the app menu 🝙.

Library - tap the button to play from the library.

Shuffle - tap the button to play tracks in a random order.

Similar - tap the button to use Gracenote to search for similar music on the USB device and create a playlist from the music found. The playlist can contain up to 50 tracks.

Change device - tap the button to toggle between USB devices when more than one is connected.

13.2.8. Media searches

Searches can be performed to locate a specific artist, composer, song title, album, video, audio book or playlist. If the vehicle is connected to the Internet, it is also possible to search for podcasts (online digital media).

- 1 Tap 🔾.
- > Search view will displayed and the keyboard will open.
- 2 Enter a search word/phrase.
- 3 Tap Search.
- > A search will be performed on connected devices and the results will be displayed by category.

Swipe the screen horizontally to display each category separately.

13.2.9. Compatible file formats for media

In order to play media, the following file formats must be used.

Audio files

Format	File extension	Codec
MP3	.mp3	MPEG1 Layer III, MPEG2 Layer III, MP3 Pro (mp3 compatible), MP3 HD (mp3 compatible)
AAC	.m4a, .m4b, .aac	AAC LC (MPEG-4 part III Audio), HE-AAC (aacPlus v1/v2)
WMA	.wma	WMA8/9, WMA9/10 Pro
WAV	.wav	LPCM
FLAC	.flac	FLAC

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note. 702 / 1010

Video files

Format	File extension
MP4	.mp4, .m4v
MPEG-PS	.mpg, .mp2, .mpeg, .m1v
AVI	.avi
AVI (DivX)	.avi, .divx
ASF	.asf, .wmv

Subtitles

Format	File extension
SubViewer	.sub
SubRip	.srt
SSA	.ssa

DivX®

DivX-certified devices have been tested for high-quality DivX (.divx, .avi) video playback. When you see the DivX logo, you have the freedom to play your favorite DivX videos.

Profile	DivX Home Theater
Video codec	DivX, MPEG-4
Resolution	720x576
Audio speed (bit rate)	4.8Mbps
Frame rate	30 fps
File extension	.divx, .avi
Max. file size	4 GB
Audio codec	MP3,AC3
Subtitles	XSUB
Special functions	Multiple subtitles, multiple audio, resume play
Reference	Meets all requirements of the DivX Home Theater profile. Visit <u>divx.com</u> for more information and software tools to convert your files into DivX Home Theater video.

13.2.10. Gracenote®

Gracenote identifies artists, albums, tracks and any associated images that can be displayed during playback.

Gracenote MusicID[®] is a standard for music recognition. It can identify and analyze the metadata of music files and present information about the music. Metadata from different sources may sometimes be inconsistent or insufficient.

703 / 1010

Because Gracenote supports phonetic processing of artist name, album titles and genres, voice control can be used to control music playback.

- 1 Tap Settings in the Top view.
- 2 Tap Media → Gracenote[®].
- 3 Choose settings for Gracenote data:
- Gracenote[®] Online Search search Gracenote's online database for currently playing media.
- Gracenote[®] Multiple Results select how Gracenote data should be displayed if there are multiple search results.

1 - the file's original data will be used.

- 2 Gracenote data will be used.
- 3 Gracenote or original data can be selected.
- None no result will be displayed.

Updating Gracenote

The contents of the Gracenote database are continuously updated. Download the latest update to take advantage of improvements.

13.2.11. Updating Gracenote[®]

Volvo is constantly working to keep your vehicle up to date. It is therefore a good idea to update Gracenote[®] at regular intervals. Updating takes place in two stages using an empty USB memory.

Download files and update Gracenote[®]

It is a good idea to update Gracenote[®] at regular intervals. A description of how to download update files and update Gracenote[®] in your Volvo can be found below.

Preparations

The files can be downloaded to an empty USB memory of at least 8 GB. The memory must have one of the following formats: FAT32, NTFS or exFAT.

Download program

Gracenote[®] files are downloaded using a program that is installed on your computer when you download update files.

Update Gracenote[®] files

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note. 704 / 1010 To download update files for Gracenote[®], go to <u>volvocars.com/intl/support [https://www.volvocars.com/intl/support]</u>, select your market and then click **Downloads** in the top menu. Under the **Gracenote**[®] heading, click **Update Gracenote** and then select the relevant system for your vehicle. Then follow the instructions below:

Instructions

- 1 Select the download link for either Windows or Mac, depending on which system you have.
- 2 Select Execute to install the download program.
- 3 Click New download to download the file to a USB memory.
- **4** You can verify that the download/copying to the USB memory has worked correctly before you install the file in the vehicle by repeating steps 1-2 and then pressing **Check downloads** in the download program.
- **5** Take the USB memory with the downloaded file to your vehicle and switch on the infotainment system.
- 6 Insert the USB memory in the USB port. If there are two USB ports, the second one must not be used at the same time.

The location of the port may vary between different vehicle models.

- **7** The system automatically detects the availability of an update and a message appears on screen showing that updating is in progress.
- 8 When installation is complete, a notification is displayed indicating that the update has been installed. The USB memory can now be removed.

If there are any problems with the update, contact your customer support or Volvo retailer.

Updating tips

- An update takes about 15 minutes and the infotainment system must be on. Use a battery charger or keep the vehicle's engine running while the update is in progress, for example during a trip.
- Gracenote[®] is updated all the time. Keep an eye out for new updates.

13.2.12. Playing media via the USB port

External audio sources, such as an iPod[®] or MP3 player, can be connected to the audio system via the vehicle's USB port.

Devices with rechargeable batteries can be charged when they are connected via the USB port and the ignition is in mode I, II or the engine is running.

The content on the external source can be read faster if it only contains data of a compatible format. Video files can also be played via the USB port.

Some MP3 players have their own file system that the vehicle has support for.

13.2.13. Connecting a device via the USB port

External audio sources, such as an iPod[®] or MP3 player, can be connected to the audio system via one of the vehicle's USB ports.

If the vehicle has two USB ports, the phone must be connected to the port with the white frame to use Apple CarPlay* or Android Auto*.

USB ports (type A) under the center display.

USB ports* (type C) on rear of tunnel console for charging devices such as phones and tablets^[1].

* Option/accessory.

^[1] It is not possible to play media through the vehicle's audio or media system via this port.

13.2.14. Technical specifications for USB devices

For the contents of USB devices to be read, the following specifications must be met.

Any folder structures will not be shown in the center display during playback.

	Max. number
Files	15 000
Folder levels	8
Folders	1000
Playlists	100
Subfolders	No limit
Tracks in a playlist	1000

Technical specifications for the USB-A connector

- Type A port
- Version 2.0
- Voltage 5 V
- Max. current 2.1 A

Technical specifications for the USB-C connector

- Type C port
- Version 3.1
- Voltage 5 V
- Max. current 3.0 A

13.3. Phone

13.3.1. Connecting a phone

13.3.1.1. Connecting a phone to the car via Bluetooth automatically

A phone can be automatically connected to the vehicle via Bluetooth. The phone must have first been paired with the vehicle.

Only the two most recently connected phones can be connected automatically.

1 Activate Bluetooth in the phone before turning the vehicle's ignition to mode I.

- 2 Turn the ignition to | or higher.
- > The phone will be connected.

13.3.1.2. Connecting a phone to the car via Bluetooth for the first time

Pair a Bluetooth-enabled phone to the vehicle to make calls, send/receive text messages and wirelessly play media from the vehicle, or connect the vehicle to the Internet.

No phone connected
Dive Perfamance
No Info
22° 6 40 22°

Two Bluetooth devices can be connected at the same time, but in that case, only one will be used for wireless playback. The most recently paired phone will be automatically connected to make calls, send/receive text messages, play media or use as an Internet connection^[1]. It is possible to change what the phone is used for under **Bluetooth Devices** via the settings menu in the center display's Top view. The cellular phone must be equipped with Bluetooth and support tethering.

After the device has been connected/registered for the first time via Bluetooth, the device no longer needs to be visible/searchable. It just needs to have Bluetooth activated. A maximum of 20 paired Bluetooth devices can be stored in the vehicle.

If you have a new device with the same name as another device that was previously connected to the vehicle, you may need to first delete the old device from the vehicle's list of previously connected devices. The new device can then be connected as usual.

There are two ways to pair a phone to the vehicle. Searching for the phone from the vehicle or searching for the vehicle from the phone.

Option 1 - searching for the phone from the vehicle

- 1 Make the phone discoverable/visible using its Bluetooth function.
- **2** Open the phone tile in the center display.
 - If no phone has been paired to the vehicle, tap Add phone.
 - If a phone has been paired to the vehicle, tap Change 🔂. Tap Add phone in the pop-up window.
- > A list of available Bluetooth devices will be displayed. The list will be updated as new devices are discovered.
- **3** Tap the name of the phone you would like to connect.
- 4 Make sure that the code displayed in the vehicle matches the one in the phone. If it does, confirm the code in both places.
- 5 In the phone, accept or cancel the options for selecting the phone's contacts and text messages.

(i) Note

- The message function must be activated in certain phones.
- Not all phones are fully compatible and may not be able to display contacts and messages in the vehicle.

Option 2 - searching for the vehicle from the phone

- **1** Open the phone tile in the center display.
 - If no phone has been paired to the vehicle, tap Add phone \rightarrow Make vehicle discoverable.
 - If a phone has been paired to the vehicle, tap Change
 D. Tap Add phone → Make vehicle discoverable in the pop-up window.
- **2** Activate Bluetooth in the phone.
- **3** Search in the phone for Bluetooth devices.
- > A list of available Bluetooth devices will be displayed.
- 4 Select the vehicle's name from the list of devices in the phone.
- **5** A pop-up window for the connection is shown in the car. Confirm the connection.
- 6 Make sure that the code displayed in the vehicle matches the one shown in the external device. If it does, confirm the code in both places.
- 7 In the phone, accept or cancel the options for selecting the phone's contacts and text messages.

(i) Note

- The message function must be activated in certain phones.
- Not all phones are fully compatible and may not be able to display contacts and messages in the vehicle.

(i) Note

If the phone's operating system is being updated, it is possible that the connection will be interrupted. Delete the phone from the car and reconnect.

^[1] Can also be adjusted manually under settings.

13.3.1.3. Disconnecting a Bluetooth-connected phone

A Bluetooth-connected phone can be disconnected from the vehicle.

- When the phone is out of range of the vehicle, it will be automatically disconnected. If a call is in progress when the phone Ð is disconnected from the vehicle, the call will be transferred from the vehicle's speakers and microphone to the cellular phone.
- The phone can also be disconnected by manually deactivating Bluetooth.

13.3.1.4. Switch between phones connected via Bluetooth

It is possible to switch between Bluetooth-connected phones.

- Open the phone tile. 1
- **2** Tap Change $\overline{\Box}$ or pull down Top view and tap Settings \rightarrow Communication \rightarrow Bluetooth Devices \rightarrow Add device.
- > A list of available Bluetooth devices will be displayed.
- 3 Tap the name of the phone you would like to connect.

13.3.1.5. Disconnecting Bluetooth-connected devices

Phones or other devices in the list of registered Bluetooth devices can be removed.

- Tap Settings in the Top view. 1
- Tap Communication -> Bluetooth Devices. 2
- A list of registered Bluetooth devices is displayed.
- Tap the name of the device you would like to remove. 3
- Tap Remove device and confirm. Δ
- > The device is no longer registered in the vehicle.

If you have a new device with the same name as another device that was previously connected to the vehicle, you may need to first delete the old device from the vehicle's list of previously connected devices. The new device can then be connected as usual.

13.3.1.6. Bluetooth profiles for Sensus Connect

Sensus Connect IHU^[1] supports Bluetooth Core version 2.1+EDR^[2]. The table provides information on which Bluetooth profiles are supported by your vehicle's infotainment system. (The article is relevant for vehicles with Sensus Connect IHU 3.2 infotainment system).

Center display for Sensus Connect.

^[2] Enhanced Data Rate

13.3.1.7. Connecting a phone to the car via Bluetooth manually

A phone can be manually connected to the vehicle via Bluetooth. The phone must have first been paired with the vehicle.

- Activate Bluetooth in the phone. 1
- **2** Open the phone tile.
- > A list of available phones will be displayed.
- **3** Tap the name of the phone you would like to connect.
- > The phone will be connected.

13.3.2. Apple CarPlay

13.3.2.1. Apple[®] CarPlay[®]*

With CarPlay^[1], you can listen to music, make phone calls, get driving instructions, send/receive messages and use Siri, all while remaining focused on driving.

CarPlay works with select iOS devices. If the car does not already support CarPlay, this can be retrofitted. Contact a Volvo retailer to install CarPlay.

Information on supported apps and compatible iOS devices is available on the Apple website: <u>www.apple.com/ios/carplay/</u> [<u>https://www.apple.com/ios/carplay/</u>]. Using apps that are not compatible with CarPlay could cause the connection between the device and the vehicle to be broken. Please note that Volvo is not responsible for the content of CarPlay.

When using navigation guidance provided by CarPlay, navigation will only be shown on the center display and not in the instrument panel.

When navigation is started through Apple CarPlay, any current route guidance from the vehicle's own systems will be discontinued.

CarPlay apps can be controlled from the center display, an iOS device or with the right-side steering wheel keypad (for certain functions). The apps can also be voice-controlled using Siri. Press and hold the && button on the steering wheel to start voice control with Siri. Press briefly to activate the vehicle's own voice control system. If Siri cuts off too soon, press and hold the && button on the steering wheel.

By using Apple CarPlay you acknowledge the following: Apple CarPlay is a service provided by Apple Inc. under its terms and conditions. Volvo Cars is thus not responsible for Apple CarPlay or its features/applications. When using Apple CarPlay, certain information from your car (including its position) is transferred to your iPhone. In relation to Volvo Cars, you are fully responsible for your and any others person's use of Apple CarPlay.

- * Option/accessory.
- ^[1] Availability may vary depending on market.
- ^[2] Apple and CarPlay are registered trademarks of Apple Inc.

13.3.2.2. Using Apple[®] CarPlay[®]*

To use CarPlay^[1], the Siri voice control must be activated in your iOS device. The device must also have an Internet connection via Wi-Fi or a mobile network for all functions to work.

Connecting an iOS device and starting CarPlay

(i) Note

CarPlay can only be used if Bluetooth is disabled. A cell phone or media player connected to the vehicle via Bluetooth will therefore not be available when CarPlay is active. An alternative source must be used to provide an Internet connection for the vehicle's apps. Use Wi-Fi or the vehicle's integrated modem.

To start CarPlay from an iOS device that has not previously been connected:

- 1 Connect an iOS device that supports CarPlay to the USB port. If there are two USB ports, use the one with the white frame.
- 2 Read the terms and conditions and then tap Accept to connect.
- > The CarPlay tile will open and compatible apps will be displayed.
- **3** Tap the desired app.
- > The app will start up.

Starting CarPlay

To start CarPlay from an iOS device that has previously been connected:

- Connect an iOS device to the USB port. If there are two USB ports, use the one with the white frame. 1
- > If the auto start setting is selected the name of the device will be displayed. The CarPlay tile will open automatically when Home view is displayed when the iOS device is connected.
- 2 If the CarPlay tile does not open automatically, tap the name of the device. The CarPlay tile will open and compatible apps will be displayed.
- If any other app is active in the same tile, tap Apple CarPlay in App view. 3
- > The CarPlay tile will open and compatible apps will be displayed.
- Tap the desired app. Δ
- > The app will start up.

CarPlay will run in the background if another app is started, or is already active when the device is connected, in the same view. To display CarPlay in the tile, tap the CarPlay icon in App view.

Switching connection between CarPlay and iPod

CarPlay to iPod

- Tap Settings in the Top view. 1
- Proceed to Communication -> Apple CarPlay. 2
- Uncheck the box for the iOS device that should no longer start CarPlay automatically when the USB cable is connected. 3
- Remove and then reinsert the iOS device into the USB port. 4
- Open the iPod app from App view. 5

iPod to CarPlay

- Tap Apple CarPlay in App view. 1
- Read the information in the pop-up window and then tap OK. 2
- Remove and then reinsert the iOS device into the USB port. 3
- > The Apple CarPlay tile will open and compatible apps will be displayed^[2].

^{*} Option/accessory.

- ^[1] Availability may vary depending on market.
- ^[2] Apple, CarPlay, iPhone and iPod are registered trademarks of Apple Inc.

13.3.2.3. Tips for using Apple[®] CarPlay[®]*

Here are some useful tips for when you use $CarPlay^{(n)}$.

- Update your iOS device with the latest version of the iOS operating system and ensure that the apps have been updated.
- In the event of a problem with CarPlay, unplug the iOS device from the USB port and then plug it in again. Otherwise, try to close the app on the device that is not working and then restart the app, or try closing all apps and restart your device.
- If the apps do not appear when CarPlay starts (black screen), try minimizing and expanding the tile for CarPlay.
- Using apps that are not compatible with CarPlay may sometimes cause the connection between the iOS device and the vehicle to be broken. Information about supported apps and compatible devices can be found on Apple's website. You can also search for CarPlay in the App Store to find information about apps that are compatible with CarPlay in your market.
- You can use Siri to write or dictate messages or have them read aloud. Messages are read aloud and dictated in the language selected in the Siri settings. When you write/dictate messages, no text will be shown in the vehicle's center display, but the text will be shown in your iOS device. When using Siri, note that it is the phone's microphones that are used and the quality therefore depends on the phone's location.
- If the device is connected to the vehicle through Bluetooth, the connection will be broken when CarPlay is used. Resume Internet connection in the vehicle by tethering using the device's Wi-Fi hotspot.
- Some of CarPlay's functions (such as voice calls and messages) interrupt the use of the vehicle's own functions and CarPlay will instead be automatically displayed. If you do not wish this to happen, deselect display of the corresponding function in CarPlay under the phone's notification settings.
- CarPlay only works with iPhone^[2].

(i) Note

Availability and functionality can vary depending on market.

- * Option/accessory.
- ^[1] Availability may vary depending on market.
- ^[2] Apple, CarPlay and iPhone are registered trademarks owned by Apple Inc.

13.3.2.4. Settings for Apple[®] CarPlay[®]*

Settings for an iOS device connected through CarPlay^[1],^[2].

Automatic start

- 1 Tap Settings in the Top view.
- 2 Tap Communication → Apple CarPlay and select the desired setting:
 - Check the box CarPlay will start automatically when the USB cable is connected.
 - Uncheck the box CarPlay will not start automatically when the USB cable is connected.

A maximum of 20 iOS devices can be stored in the list, which may be worth noting if many people share the vehicle, e.g. in a car pool. When the list is full and a new device is connected, the oldest one will be deleted.

To delete the list, the settings must be rest in the center display (factory reset).

System Volumes

- 1 Tap Settings in the Top view.
- 2 Tap Sound → System Volumes to change the settings for the following:
 - Voice Control
 - Navi Voice Guidance
 - Phone Ringtone
- * Option/accessory.
- ^[1] Apple and CarPlay are registered trademarks of Apple Inc.
- ^[2] Availability may vary depending on market.

13.3.3. Android Auto

13.3.3.1. Android Auto*

Android Auto^[1] lets you listen to music, make calls, get driving directions and use apps customized for your vehicle from an Android device. Android Auto can be used with selected Android devices.

For information on supported apps and compatible Android devices, please go to <u>www.android.com/auto/</u> [<u>https://www.android.com/auto/]</u>. For third-party apps, see Google Play. Please note that Volvo is not responsible for the content of Android Auto.

Android Auto is started from App view. After Android Auto has been initially started, the app will start automatically the next time the device is connected. The automatic start setting can be deactivated in Settings.

(i) Note

When a device is connected to Android Auto, it is possible to stream to another media player via Bluetooth. Bluetooth is active while Android Auto is in use.

When using navigation guidance provided by Android Auto, navigation will only be shown on the center display and not in the instrument panel.

Android Auto can be controlled from the center display, with the right-side steering wheel keypad or by using voice control. Press and hold the && button on the steering wheel to start the Google Assistant and press briefly to deactivate it.

By using Android Auto, you acknowledge the following: Android Auto is a service provided by Google Inc. under its terms and conditions. Volvo Cars is not responsible for Android Auto or its features or applications. When you use Android Auto, your car transfers certain information (including its location) to your connected Android phone. You are fully responsible for your and any other person's use of Android Auto.

* Option/accessory.

^[1] Availability may vary depending on market.

13.3.3.2. Using Android Auto*

To use the **Android Auto**^[1] app, the app must be installed on the Android device and the device must be connected to the vehicle's USB port.

(i) Note

For installation of Android Auto to be possible, the vehicle must be equipped with two USB ports (USB hub)*. If the vehicle only has one USB port, it will not be possible to use Android Auto.

Connecting an Android device for the first time

- 1 Connect the Androiddevice to the USB port with the white frame.
- 2 Read the information in the pop-up window and then tap OK.
- 3 Tap Android Auto in App view.
- 4 Read the terms and conditions and then tap Accept to connect.
- > The Android Auto tile will open and compatible apps will be displayed.
- 5 Tap the desired app.
- > The app will start up.

From a previously connected Android device
- 1 Connect the device to the USB port with the white frame.
- > If the auto start setting is selected the name of the device will be displayed.
- 2 Tap the name of the device the Android Auto tile will open and compatible apps will be displayed.
- 3 If the automatic start setting is not activated open the Android Auto app from App view.
- > The Android Auto tile will open and compatible apps will be displayed.
- **4** Tap the desired app.
- > The app will start up.

Android Auto will run in the background if another app is started in the same tile. To display Android Auto in the tile, tap the Android Auto icon in App view.

- * Option/accessory.
- ^[1] Availability may vary depending on market.

13.3.3.3. Tips for using Android Auto*

Here are some useful tips for when you use Android Auto^[1].

- Ensure that your apps are updated.
- When starting the vehicle, wait until the center display has started, connect the device and then open Android Auto from the app view.
- In the event of problems with Android Auto, unplug your Android device from the USB port and then plug it in again. Otherwise, try closing the app on the device and then restarting the app.
- When a device is connected to Android Auto it is still possible to play media via Bluetooth to another media player. The Bluetooth function is on when Android Auto is used.
- If the Android Auto icon is grayed out, it means that a device is no longer connected. When you connect your device, the icon will light up. If there is no icon at all, the vehicle does not support connecting a device for this purpose.
- If the device is connected to the vehicle through Bluetooth, the connection will be broken when Android Auto is used. Resume Internet connection in the vehicle by tethering using the device's Wi-Fi hotspot.
- * Option/accessory.

^[1] Availability may vary depending on market.

13.3.3.4. Settings for Android Auto*

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note.

Settings for Android devices initially connected with Android Auto^[1].

Automatic start

- 1 Tap Settings in the Top view.
- 2 Tap Communication → Android Auto and select setting:
 - Check the box Android Auto will start automatically when the USB cable is connected.
 - Uncheck the box Android Auto will not start automatically when the USB cable is connected.

A maximum of 20 Android devices can be stored in the list. When the list is full and a new device is connected, the oldest one will be deleted.

A factory reset must be performed to delete the list.

System Volumes

- 1 Tap Settings in the Top view.
- 2 Tap Sound \rightarrow System Volumes to change the settings for the following:
 - Voice Control
 - Navi Voice Guidance
 - Phone Ringtone

* Option/accessory.

^[1] Availability may vary depending on market.

13.3.4. Settings for Bluetooth devices

Settings for Bluetooth-connected devices.

- 1 Tap Settings in the Top view.
- 2 Tap Communication → Bluetooth Devices and select settings:

- Add device start the procedure for pairing a new device.
- Previously paired devices lists registered/paired devices.
- Remove device remove a connected device.
- Allowed services for this device select what the device will be used for: making calls, sending/receiving messages, streaming media, Internet connection.
- Internet connection connect the vehicle to the Internet using the device's Bluetooth connection.

Bluetooth[®] declaration of conformity

USA

FCC CAUTION

Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment. This transmitter must not be co-located or operated in conjunction with any other antenna or transmitter.

Canada

This device complies with Industry Canada license-exempt RSS standard(s). Operation is subject to the following two conditions:

(1) this device may not cause interference, and

(2) this device must accept any interference, including interference that may cause undesired operation of the device.

(i) Note

For some phones, the phone's Bluetooth volume must be manually set to 100% for the audio volume in the vehicle to be sufficiently high. This setting needs to be adjusted for each connected phone. The setting is adjusted separately for phone calls and media streaming. The system will then remember the setting and it will not need to be repeated the next time the phone is connected.

13.3.5. Connecting the vehicle to the Internet via a Bluetooth-connected phone

Establish an Internet connection using Bluetooth and tethering from a phone and get access to multiple connected services in your vehicle.

- 1 To connect the vehicle to the Internet via a Bluetooth-connected phone, the phone must first be paired with the vehicle via Bluetooth.
- 2 Make sure that the phone supports Internet sharing (tethering) and that the function is activated. In an iPhone, the function is called "personal hotspot". In Android phones, the function can have different names, but is often called "hotspot". For iPhone phones, the "personal hotspot" menu page must also be open until the Internet connection has been made.
- 3 If the phone has been connected via Bluetooth previously, tap Settings in the center display's Top view.
- 4 Tap Communication → Bluetooth Devices.
- 5 Mark the window for Bluetooth Internet connection under the heading Internet connection.
- 6 If a different connection is being used, confirm the connection change.
- > Your vehicle is now connected to the Internet via your Bluetooth-connected phone.

(i) Note

The cellular phone and network operator must support tethering (sharing of Internet connection) and the subscription must include data traffic.

```
(i) Note
```

When using Apple CarPlay, it is only possible to connect the vehicle to the Internet using Wi-Fi or the vehicle's modem.

13.3.6. Phone

A phone equipped with Bluetooth can be wirelessly connected to the vehicle's integrated hands-free system.

The audio and media system offers hands-free functionality for remotely controlling a number of the phone's features. The phone's integrated controls can also be used, even when it is connected to the vehicle.

When the phone has been paired and connected to the vehicle, it can be used as an Internet connection or to make or receive calls, send or receive text messages or wirelessly play music.

The phone is controlled from the center display, and the App menu (accessed using the right-side steering wheel keypad) and voice control can also be used to control certain functions.

Overview

- 1 Microphone.
- 2 Phone.
- **3** Wireless phone charger.
- 4 Phone handling in the center display.
- **6** Keypad for controlling phone functions shown in the center display as well as voice control.
- 6 Instrument panel.

13.3.7. Voice control for cellular phones

Call a contact in the phone book, have a text message read aloud or dictate short messages using voice control commands to a Bluetooth-connected phone.^[1]

To access a contact in the phone book, the voice control command must contain the contact information entered in the phone book. If a contact, e.g. **Robyn Smith**, has several phone numbers listed in the phone book, a number category such as **home** or **cellular** can also be specified, i.e. **"Call Robyn Smith cellular**".

Tap ⊮ € and say one of the following commands:

- "Call [contact]" call the selected contact from the phone book.
- "Call [phone number]" call a phone number.
- "Recent calls" display the list of recent calls.
- "Read message" read a text message aloud. If there are several messages, select the message to read aloud.
- "Message to [contact]" the user is prompted to speak a short message. The message will then be read aloud and the
 user can choose to send^[2] or re-dictate the message. The vehicle must be connected to the Internet to access this function.

(i) Note

Not all system languages support voice control. If a language supports voice control, it is marked with a \pounds symbol in the list of available system languages. Read more about where the information is found in the section on voice control settings.

^[1] Certain markets only.

^[2] Not all phones can send messages via the vehicle.

13.3.8. Phone settings

When the phone is connected to the car, the following settings can be made:

- 1 Tap Settings in the Top view.
- **2** Tap Communication \rightarrow Phone and select settings:
 - **Ringtones** select a ring tone. Ring tones from the cellular phone or the vehicle can be used. Some phones are not fully compatible and it may not be possible to use the phone's ring tones in the vehicle.
 - Sort Order select sort order in the contact list.

(i) Note

For some phones, the phone's Bluetooth volume must be manually set to 100% for the audio volume in the vehicle to be sufficiently high. This setting needs to be adjusted for each connected phone. The setting is adjusted separately for phone calls and media streaming. The system will then remember the setting and it will not need to be repeated the next time the phone is connected.

13.3.9. Managing the phone book

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note. 727 / 1010 When a phone is connected with Bluetooth to the vehicle, contacts can be managed directly in the center display.

Up to 3,000 contacts can be displayed from the phone selected in the center display.

 \bigcirc Scroll by letter or # to find contacts. Only letters matching existing contacts in the phone book will be shown.

2 Search contacts - tap **Q** to search by phone number or name in the phone book.

 \bigcirc Favorites - tap 🔀 to add/remove a contact from the list of favorites.

Sorting

The phone book is sorted in alphabetical order and special characters and numbers are sorted under #. The list can be sorted by either first name or last name. This is adjusted in your cellular phone settings.

13.3.10. Handling phone calls

Handling phone calls in the vehicle for a Bluetooth-connected cellular phone.

C. C.	Rebecca Swanson ■ 00:44	
	×.	+
Contacts	Mute	Add call
(=		
Recent		
Keypad	Keypad	Privacy
Change -	~	

The illustration is generic.

Making calls

- 1 Open the phone tile.
- 2 Initiate a call by selecting the phone number from the recent calls list, entering the number on the keypad or selecting a number from the phone book (list of contacts). You can search or scroll to find a contact in the phone book. Tap 🔆 in the phone book to add a contact to Favorites.
- 3 Tap 🔪 to make a call.
- 4 Tap to end the call.

Calls can also be made from the list of recent calls using the app menu, which can be opened using the 🖻 button on the rightside steering wheel keypad.

Making multiple calls

While the call is in progress:

- 1 Tap Add call.
- **2** Select from the list of recent calls, favorites or contacts.
- 3 Tap an item/row in the list of recent calls or ζ for the contact in the phone book.
- **4** Tap **Swap call** to switch between calls.
- **5** Tap to end the current call.

Group (conference) calls

While multiple calls are in progress:

- 1 Tap Join calls to merge ongoing calls.
- 2 Tap to end the call.

Incoming calls

Incoming phone calls will be shown on the instrument panel and in the center display. Manage the calls using the right-side steering wheel keypad or the center display.

- 1 Tap Answer/Reject.
- 2 Tap to end the call.

Incoming calls while another call is in progress

- 1 Tap Answer/Reject.
- 2 Tap to end the call.

Privacy

- 1 While a call is in progress, tap **Privacy** and select setting:
 - Switch to mobile phone the hands-free function will be disabled and the call will proceed on the cellular phone.
 - Driver focused the microphone in the ceiling liner on the passenger side will be muted and the call will proceed using the vehicle's hands-free function.

(i) Note

For some phones, the phone's Bluetooth volume must be manually set to 100% for the audio volume in the vehicle to be sufficiently high. This setting needs to be adjusted for each connected phone. The setting is adjusted separately for phone calls and media streaming. The system will then remember the setting and it will not need to be repeated the next time the phone is connected.

13.3.11. Handling text messages

A Bluetooth-connected cellular phone's text messages can be handled in the vehicle.^[1]

Text message functionality needs to be activated in certain phones. Not all phones are fully compatible and therefore cannot display contacts and messages in the vehicle.

Handling text messages in the center display

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note. 730 / 1010 Text messages are only shown in the center display if the relevant setting is made.

Messages

Tap Messages in App view to handle text messages in the center display.

(i) Note

When the vehicle is moving:

- Only one row of the message will be displayed. Tap **Read out** to have the entire message read aloud.
- The center display's keyboard cannot be used.

Reading text messages in the center display aloud

Tap the icon to have the message read aloud.

Sending text messages in the center display^[2]

- 1 It is possible to reply to text messages or create a new message.
 - To reply to a text message tap the name of the contact who sent the message and then tap Answer.
 - To create a new message tap Create new. Select a contact or enter a phone number.
- 2 Write the message.
- 3 Tap Send.

Handling text messages in the instrument panel

Text messages are only shown in the instrument panel if the relevant setting is made.

Reading new text messages in the instrument panel aloud

1 To have the message read aloud, select **Read out** using the steering wheel keypad.

Dictating replies in the instrument panel

After the text message has been read aloud, it is possible to answer briefly with dictation if the vehicle has an Internet connection.

1 Tap Answer using the steering wheel keypad. A dictation dialog will start.

Message alert

Alerts can be activated and deactivated in the text message settings.

^[1] Only applies to certain markets. Contact a Volvo retailer for more information.

^[2] Only certain phones can send text messages via the vehicle. The connected phone must support the Bluetooth profile Message Access Profile (MAP).

13.3.12. Text message settings

Settings for handling text messages received through a connected phone can be personalized.

- 1 Tap Settings in the Top view.
- 2 Tap Communication -> Text Messages and select settings:
 - Notification in center display display text message notifications in the center display's status bar.
 - Notification in driver display displays notifications in the driver's display and incoming messages can be managed using the steering wheel's right-hand keypad.
 - Text message tone select tone for incoming text messages.

13.3.13. Wireless phone charger*

A charging pad for wireless phone charging is located in the tunnel console.

To be able to charge, the phone must have wireless charging (Qi) capability. Phones not equipped with a wireless charging receiver can often be supplemented with a shell that enables wireless charging.

This device complies with 47CFR part 15 of FCC rules. Operation is subject to the condition that this device does not cause harmful interference.

/ Warning

Wireless charging can affect the operation of an implanted pacemaker or other medical devices. If you have one, it is recommended to consult with your doctor before using the wireless charging system.

* Option/accessory.

13.3.14. Using the wireless phone charger*

The rubber pad below the center display can be used to charge a phone without having to connect its cord.

Wireless phone charger in front of gear selector

/ Warning

Wireless charging can affect the operation of an implanted pacemaker or other medical devices. If you have one, it is recommended to consult with your doctor before using the wireless charging system.

To use the wireless charging plate:

- 1 Remove all objects from the charging pad and place the phone in the center of the pad.
- ► The phone will begin charging and the () symbol will appear at the top of the center display.

(!) Important

Do not place cards with NFC (Near Field Communication), e.g. debit cards for contactless payment, next to the phone. This type of card could be destroyed during charging.

(i) Note

Some cellular phones may become warm during wireless charging. This is normal.

If the phone is not charging:

- Make sure there are no other objects on the charging pad.
- Make sure the phone supports wireless charging (Qi).
- If the phone has a phone case, remove it.
- Lift up the phone and then put it back on the center of the charging pad.
- Make sure the ignition is on.
- Make sure the phone hasn't slid off the charging pad while driving.
- If the temperature of the battery becomes too high while charging, the charging function will be switched off.
- If any of the doors are opened, charging will stop for a few seconds.

If an object is preventing charging on the charge pad, a message will be shown in the center display.

(!) Important

Keep cellular phones and charger stations away from other objects while charging to help avoid overheating.

* Option/accessory.

13.4. Apps

13.4.1. Available apps in vehicle

13.4.1.1. Android Auto*

Android Auto^[1] lets you listen to music, make calls, get driving directions and use apps customized for your vehicle from an Android device. Android Auto can be used with selected Android devices.

For information on supported apps and compatible Android devices, please go to www.android.com/auto/ [https://www.android.com/auto/]. For third-party apps, see Google Play. Please note that Volvo is not responsible for the content of Android Auto.

Android Auto is started from App view. After Android Auto has been initially started, the app will start automatically the next time the device is connected. The automatic start setting can be deactivated in Settings.

(i) Note

When a device is connected to Android Auto, it is possible to stream to another media player via Bluetooth. Bluetooth is active while Android Auto is in use.

When using navigation guidance provided by Android Auto, navigation will only be shown on the center display and not in the instrument panel.

Android Auto can be controlled from the center display, with the right-side steering wheel keypad or by using voice control. Press and hold the 🕪 button on the steering wheel to start the Google Assistant and press briefly to deactivate it.

By using Android Auto, you acknowledge the following: Android Auto is a service provided by Google Inc. under its terms and conditions. Volvo Cars is not responsible for Android Auto or its features or applications. When you use Android Auto, your car transfers certain information (including its location) to your connected Android phone. You are fully responsible for your and any other person's use of Android Auto.

* Option/accessory.

^[1] Availability may vary depending on market.

13.4.1.2. Available apps

Volvo provides a wide selection of services, apps and programs that you can use in your vehicle.

Sensus Connect gives you access to apps for entertainment, navigation and service in the vehicle. To see what apps are available for download, go to **Download Center** in the vehicle's center display^[1].

Tips when using apps

Many apps require an Internet connection to use certain functions^[2].

If you experience that an app has stopped working, try uninstalling and then reinstalling the app.

(i) Note

The selection of available apps may vary from market to market. Support for services from Volvo's third-party suppliers may also vary. It may be the case that one or several apps are not available on the market where the vehicle is sold or used.

^[1] Availability may vary depending on market.

^[2] There may be a charge for transmitting data over the Internet, depending on your service plan.

13.4.1.3. Apple[®] CarPlay[®]*

With CarPlay^[1], you can listen to music, make phone calls, get driving instructions, send/receive messages and use Siri, all while remaining focused on driving.

CarPlay works with select iOS devices. If the car does not already support CarPlay, this can be retrofitted. Contact a Volvo retailer to install CarPlay.

Information on supported apps and compatible iOS devices is available on the Apple website: <u>www.apple.com/ios/carplay/</u> [https://www.apple.com/ios/carplay/]. Using apps that are not compatible with CarPlay could cause the connection between the device and the vehicle to be broken. Please note that Volvo is not responsible for the content of CarPlay.

When using navigation guidance provided by CarPlay, navigation will only be shown on the center display and not in the instrument panel.

When navigation is started through Apple CarPlay, any current route guidance from the vehicle's own systems will be discontinued.

CarPlay apps can be controlled from the center display, an iOS device or with the right-side steering wheel keypad (for certain functions). The apps can also be voice-controlled using Siri. Press and hold the 🕪 button on the steering wheel to start voice control with Siri. Press briefly to activate the vehicle's own voice control system. If Siri cuts off too soon, press and hold the ((\pounds ^[2] button on the steering wheel.

By using Apple CarPlay you acknowledge the following: Apple CarPlay is a service provided by Apple Inc. under its terms and conditions. Volvo Cars is thus not responsible for Apple CarPlay or its features/applications. When using Apple CarPlay, certain information from your car (including its position) is transferred to your iPhone. In relation to Volvo Cars, you are fully responsible for your and any others person's use of Apple CarPlay.

737 / 1010

- * Option/accessory.
- ^[1] Availability may vary depending on market.
- ^[2] Apple and CarPlay are registered trademarks of Apple Inc.

13.4.1.4. Air Quality app

A climate sensor measures the concentration of $PM_{2.5}$ particles (particles smaller than 2.5 µm) in the passenger compartment^{*}.

Measurements of pollutants outside the vehicle are provided by an external service and based on official data.

To use this app:

- The vehicle must have network access for at least 1 minute when starting the app or restarting the vehicle.
- The vehicle must be running for the PM_{2.5} sensor to be able to measure.
- * Option/accessory.

13.4.1.5. Google Local Search

Using the Google Local Search^[1] app, you can search for restaurants, hotels and gas stations and a lot more along your route directly in your Volvo's center display.

Functions in Google Local Search

Google Local Search is a free service. You do not need to register for access to the online database. However, you need an Internet connection to be able to use the service^[2].

Using the Google Local Search app you can, among other things, search for locations, restaurants, hotels and other businesses along the route and in the vicinity of your destination.

In Google Local Search you can see information on different search results such as addresses, distances, opening times and telephone numbers. The app includes the option to call a business directly from the vehicle, and you can get directions to a destination by sending an address to Sensus Navigation.

In Google Local Search you can read, and in some cases listen to, reviews and see user ratings for, among other things, restaurants and hotels. You can also browse through and look at images linked to search results and you have access to photographs from Google Street View which can make it easier to find your way to a desired location or business.

Operating

The keyboard for searching in Google Local Search is locked while driving and reviews are limited to three rows.

Tips when using Google Local Search

If you experience problems with Google Local Search, check that you have a working internet connection and good signal strength.

^[1] Availability varies depending on market.

^[2] There may be a charge for transmitting data over the Internet, depending on your service plan.

13.4.1.6. Pandora

Pandora^[1] is an online service that allows you to access music. With Pandora you can create personal stations from a favorite artist, track or genre.

Create Pandora account

Pandora is a free service. In order to use the service, you must have an account that you create on the Pandora website^[2].

Bookmark music track

You can bookmark a track. For more information about the track or album, log in to the <u>Pandora website</u>^[3].

Tips when using Pandora

If you experience problems with Pandora, check that you have a working internet connection and good signal strength.

When using Pandora it is possible to skip over six tracks per station and per hour.

It is not possible to search forward or back through the tracks in the vehicle version of the app.

^[1] Availability varies depending on market.

^[2] It is not possible to create an account from the vehicle.

^[3] Cannot be viewed from the vehicle.

13.4.1.7. Park and Pay

Park and Pay^[1] is an app that can help you find vacant parking spaces. In some cases, you can also pay for your parking via the app. Park and Pay can be used if the vehicle is equipped with Sensus Connect and Sensus Navigation.

The Park and Pay app

With the Park and Pay app you can find free parking spots and pay for your parking. The payment service is available in parking locations that are connected to the payment providers supported by Park and Pay. These locations are indicated in the app by an icon in the list view as well as under "detailed information" for each parking spot. There you will also find information about payment providers and parking identification.

Using Park and Pay

No account is required to use the Park and Pay app, but you need to register on the payment provider's website to be able to pay for parking via the app.

The Park and Pay app is a free service but you will be charged by the payment provider if you use the payment function. Note that data usage charges may be incurred depending on subscription. Contact your internet provider for more information about data usage costs.

Price example

The detailed view for parking spaces shows a price example, which can vary depending on the time and date. The price stated once you have set the estimated time for parking is the actual cost of the parking for the estimated time.

End parking

If you use a parking space where you only pay for the time you parked, the app will ask you to enter the estimated time for parking so that you do not forget to end parking. If you end parking before it expires, you will only pay for the time you parked^[2].

Tips when using Park and Pay

If you experience problems with Park and Pay, check that you have a working internet connection and good signal strength.

^[1] Availability varies depending on market.

^[2] This only applies for payment providers who support payment for ended parking.

13.4.1.8. Record & Send

Record & Send^[1] is a vehicle app that allows you to record personal voice messages and send them to a any recipient.

Making and sending recordings

When the app starts, two options will be shown: enter recipient and record by pressing the microphone symbol.

- Tap Recipient and enter the email address you would like to send the recording to. 1
- Tap the microphone symbol to start recording. 2
- Speak the message. 3
- Tap the microphone symbol again to stop recording. 4
- > You will be asked if you would like to send the recording or delete it.

Open voice recording

When a recording is sent, the recipient receives an e-mail that can be opened in a standard e-mail program, either in a cellular phone or a computer. The recording is included as an attachment file in MP3 format.

Open software

To compress your recordings in MP3 format, use the open software library LAME. You can read more about LAME on their website: www.mp3dev.org.

^[1] Availability varies depending on market.

13.4.1.9. Spotify

In your Volvo, you can use the Spotify^[1] app to listen to music when the vehicle has an Internet connection.

Getting started with Spotify with Sensus Connect

A Spotify Premium account is required to use Spotify. Currently, it is not possible to create an account from the app in your vehicle, but you can easily create an account from the Spotify website. If you already have a Spotify Premium account, you can of course use that.

Internet connection when using Spotify

To use Spotify in your vehicle, the app must have access to the Internet. Offline mode is currently not available.

Sound quality

You can choose the sound quality you prefer in the app settings. You can choose between Normal, High and Extreme sound quality.

- Normal (96 kbps)
- High (160 kbps)
- Extreme (320 kbps)

Functions

The Spotify app offers a range of options and functions, such as:

- Free text search
- Auto search
- Play/Pause/Resume
- Browse through albums, playlists, news, etc.
- Add/remove music tracks from your library
- Log in/out
- Skip between music tracks
- Spotify Connect
- Spotify Radio

(i) Note

Volvo does not save information that is used in the Spotify app with the exception of locally stored data that is necessary for the app to work. Your password is never stored and if you have signed out of the app, you must provide both username and password to log back in again.

Delete user details

To delete user details, log out of the Spotify app via the settings menu. The user details are also deleted at a factory reset of the center display.

Tips when using Spotify

If you experience problems with Spotify, check that you have a working internet connection and good signal strength.

^[1] Availability varies depending on market.

13.4.1.10. TuneIn

Tuneln^[1] is a radio app that can be used when the vehicle is connected to the Internet. Tuneln offers over 100,000 global live radio stations from every continent and over two million on-demand programs (e.g. podcasts, concerts and interviews).

TuneIn account

Although an TuneIn account is not required to use TuneIn, it is recommended. You can create your TuneIn account at <u>www.tunein.com</u>. With an account, you can select your preferred radio stations to enable easy listening access later in your vehicle.

Sound quality

You can choose a stream quality among basic, medium to high bitrates. The amount of bandwidth used depends on the quality you select; see specifications below.

Speed (kbps)	Duration (hours)	Size (MB)
32 (Basic sound quality)	1	14
64 (Basic sound quality)	1	28
96 (Medium sound quality)	1	42
128 (High sound quality)	1	56

Tips when using TuneIn

If you experience problems with TuneIn, ensure that you have an internet connection and good signal strength.

^[1] Availability varies depending on market.

13.4.1.11. Using TuneIn

The Internet radio service Tuneln^[1] has several different functions. You can, for example, play local radio, add your preferred radio stations and create shortcuts to these. This article describes how you use these services and how you access them from your vehicle.

Starting TuneIn

- 1 Download the TuneIn app from Download Center in App view.
- **2** Open the TuneIn app in App view.
- > The vehicle connects to TuneIn. The first time you connect the music buffers, which can take a few seconds.

Accessing your TuneIn account information

- 1 Open the TuneIn app in App view.
- 2 Expand the view and click on Sign in.
- > A pop-up window appears and you can log in.
- 3 Enter your username and password, then press Sign in.
- > You can now access account information.

TuneIn categories

With TuneIn, it is easy to scroll through different categories.

- **1** Open the TuneIn app in App view.
- 2 Expand the view and click on Library.
- > A list of stations and categories appears.

TuneIn favourites

If you are logged in to TuneIn in the vehicle, your selected favorites will be synchronized with your account. Otherwise your selected favorites will only be accessible in the vehicle.

- 1 In expanded view: Click on the radio station you want to mark as favorite.
- 2 Mark the star icon to the right.
- > The station has now been added to your favorites.

^[1] Availability varies depending on market.

13.4.1.12. Weather

The Weather^[1] app provides you with weather information in the vehicle's local area or in a selected location. Weather can only be used if the vehicle is equipped with Sensus Navigation.

The Weather app

Weather gives you daily and weekly forecasts. Set the location you want updated weather for in the app settings. The settings can be accessed in the display mode for the app. Here you can also change settings for measuring wind speed.

Using Weather

Weather is a free service which does not require an account to be registered.

Note that data usage charges may be incurred depending on subscription. Contact your internet provider for more information.

Tips when using Weather

If you experience problems with Weather, check that you have a working internet connection and good signal strength.

^[1] Availability varies depending on market.

13.4.1.13. WikiLocations

With the WikiLocations^[1] app, you can read Wikipedia articles that are related to your vehicle's position and destination.

The WikiLocations app

WikiLocations gives you access to Wikipedia-based content. This is a service that is not part of the vehicle's navigation system, but you can view articles, photos and summaries that are related to your vehicle's location and destination.

The articles found in WikiLocations are those that have been designated a geographical position. WikiLocations only shows articles that match the vehicle's language settings and articles in English.

Using WikiLocations

WikiLocations is a free service which does not require an account.

Note that data usage charges may be incurred depending on subscription. Contact your internet provider for more information.

Use the steering wheel knob for safer use of the app while you drive.

Tips when using WikiLocations

If you experience problems with WikiLocations, check that you have a working internet connection and good signal strength.

^[1] Availability varies depending on market.

13.4.1.14. Yelp

You can use the Yelp^[1] app to find local companies (e.g. restaurants or shops) and can read other users' ratings and reviews of companies near you. Yelp can only be used if the vehicle is equipped with both Sensus Connect and Sensus Navigation.

The Yelp app

You can use Yelp to search for e.g. restaurants, shops, spas and local services. You can read reviews on companies that you are interested in and would like to know more about.

Note that the reviews appear depending on the language they are written in.

Using Yelp

Yelp is a free service which does not require an account to be registered.

Note that data usage charges may be incurred depending on subscription. Contact your internet provider for more information about what applies to your subscription.

Use the steering wheel knob for safer use of the app while you drive.

Search for companies nearby

To search for a company near your destination, the destination must be set in your navigation system.

In order to get the best possible results, try to use specific terms, where the free-text search matches the company name and the text in the reviews.

Tips when using Yelp

If it is not possible to start navigation to a selected company, this is probably because Yelp does not have information about the company's precise position. The same is true if it is not possible to display the location on the map.

If you experience problems with Yelp, check that you have a working internet connection with good signal strength.

^[1] Availability varies depending on market.

13.4.1.15. Vehicle status

Information on the general status of the vehicle can be viewed in the center display.

Car Status opens in the center display's App view. The following tabs will be shown:

- Messages status messages
- Status checking engine oil level and AdBlue level^[1]
- TPMS tire inflation pressure check
- Appointments vehicle information^[2]
- ^[1] AdBlue Diesel models only.
- ^[2] Certain markets only.

13.4.1.16. Download Center

The Download Center app in the vehicle's center display is used to manage software^[1] such as apps and maps.

Download Center is started from App view in the center display and makes it possible to:

- search for and update certain software
- update Sensus Navigation* map data
- download, update and delete apps.
- ^[1] There may be a charge for transmitting data over the Internet, depending on your service plan.
- * Option/accessory.

13.4.2. Apps

The App view contains apps that provide access to certain vehicle services.

Swipe the center display screen from right to left^[1] to access the App view from the Home view. This view displays down-

loaded apps (third-party apps) as well as apps for integrated functions, such as FM radio.

App view. (generic illustration; basic apps vary depending on market and model)

Several basic apps are always available. More apps such as web radio and music services can be downloaded when the car is connected to the Internet.

Some apps can only be used when the vehicle is connected to the Internet.

Start an app by tapping it.

All apps used should be updated to the latest version.

^[1] Applies for left-hand drive vehicles. For right-hand drive vehicles, swipe in the other direction.

13.4.3. Download apps

New apps can be downloaded when the vehicle is connected to the Internet.

(i) Note

The speed of other connected services may be affected during the download. The download can be canceled and started again at a later time, or the update can be prioritized by switching off other connected services, such as Internet radio.

(i) Note

When downloading using a phone, pay extra attention to the data traffic costs.

1 Open the Download Center app in App view.

- 2 Select New apps to open a list of apps that are available but are not installed in the vehicle.
- **3** Tap on the row for an app in order to expand in the list and get more information about the app.
- **4** Select **Install** to start the download and installation of the app.
- The current status of the download and installation will be shown.
 If a download cannot be started immediately, a message will be displayed. The app will remain in the list and it will be possible to reattempt downloading.

1 Tap Abort to cancel a download in progress.

Note that only a download can be cancelled. An installation cannot be cancelled once it has begun.

13.4.4. Deleting apps

When the vehicle is connected to the Internet, it is possible to uninstall apps.

If the app is being used, it must be closed before it can be uninstalled.

1 Open the **Download Center** app in App view.

- 2 Select Application updates to open a list of all installed apps.
- 3 Find the desired app and select Uninstall to begin uninstalling the app.
- > When the app has been uninstalled, it will be removed from the list.

13.4.5. Updating apps

Apps can be updated when the vehicle is connected to the Internet.

(i) Note

The speed of other connected services may be affected during the download. The download can be canceled and started again at a later time, or the update can be prioritized by switching off other connected services, such as Internet radio.

(i) Note

When downloading using a phone, pay extra attention to the data traffic costs.

If an app is being used while an update is in progress, it will be restarted to complete the update.

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note. 752 / 1010

Update all

Open the Download Center app in App view. 1

- Select Install all. 2
- > The update will begin.

Update certain apps

- Open the Download Center app in App view. 1
- Select Application updates to open a list of all available updates. 2
- Find the desired app and select Install. 3
- The update will begin.

13.4.6. Volvo ID

Volvo ID is a personal ID that gives you access to a range of services using a single username and password.

(i) Note

The available services can vary over time and depend on equipment level and market.

One example of a service in which a Volvo ID is needed is to check the vehicle via your phone using the Volvo Cars app^[1].

(i) Note

If the username/password for a service (e.g. Volvo On Call) is changed, the change will also automatically be applied to other services.

A Volvo ID can be created from the vehicle, at volvoid.eu.volvocars.com/Account [https://volvoid.eu.volvocars.com/Account/] or in the Volvo Cars app.

When a Volvo ID is registered in the vehicle, additional services are available. Multiple Volvo IDs can be used for the same vehicle, and multiple vehicles can be linked to the same Volvo ID.

753 / 1010

* Option/accessory.

^[1] For Volvo On Call* users.

13.4.7. Creating a Volvo ID

A Volvo ID can be created in various ways. If your Volvo ID was created on <u>volvoid.eu.volvocars.com/Account [https://volvoid.eu.volvocars.com/Account/]</u> or with the Volvo Cars app, the Volvo IDmust also be registered to the vehicle to enable access to the Volvo ID services.

Creating a Volvo ID with the Volvo ID app

- 1 Download the Volvo ID app from Download Center in the center display's App view.
- 2 Start the app and register a personal email address or a cellular phone number.
- **3** Follow the instructions that will be sent automatically to this email address/cell phone number.
- > A Volvo ID has now been created and is automatically registered to the vehicle. The Volvo ID services can now be used.

Creating a Volvo ID with the Volvo Cars app

- 1 Download the latest version of the Volvo Cars app to your phone^[1].
- 2 Choose to create a Volvo ID.
- 3 The website for creating a Volvo ID will appear.
- 4 Enter a personal email address or cell phone number.
- 5 Follow the instructions that will be sent automatically to this email address/cell phone number.
- > A Volvo ID is created and ready for use.

Creating a Volvo ID on the Volvo Cars website

- 1 Go to volvoid.eu.volvocars.com/Account [https://volvoid.eu.volvocars.com/Account/]. Choose to create a Volvo ID.
- 2 Enter a personal email address or cell phone number.
- 3 Follow the instructions that will be sent automatically to this email address/cell phone number.

> A Volvo ID is created and ready for use.

Registering your Volvo ID to the vehicle

If your Volvo ID was created using the Volvo Cars app, follow these steps to register the ID to the vehicle:

1 If you have not already done so, download the Volvo ID app from **Download Center** in the center display's App view.

(i) Note To download apps the vehicle must be connected to the internet.

- 2 Start the app and enter your Volvo ID.
- **3** Follow the instructions that will be automatically sent to the email address/cell phone number connected to your Volvo ID.
- > Your Volvo ID has now been registered to the vehicle. The Volvo ID services can now be used.

^[1] Can be downloaded from e.g. the Apple App Store or Google Play.

13.5. Internet connection

13.5.1. Internet-based services

13.5.1.1. Connected Safety

Connected Safety^[1] communicates information between your vehicle and other vehicles via the Internet^[2]. The function is designed to notify the driver of any hazardous road conditions ahead.

The function can notify the driver if another vehicle further down the road has activated its hazard warning flashers or detected slippery road conditions. You will also be notified if your own vehicle detects slippery road conditions.

Connected Safety can assist the driver with the following:

Hazard warning flashers alert

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note.

Slippery road alerts

Connected Safety communication between vehicles only works for vehicles that are equipped with the function and have it activated.

Hazard warning flashers alert

If your vehicle's hazard warning flashers are activated, information on this can be sent to other vehicles approaching your location.

When your vehicle approaches a vehicle with its hazard warning flashers on, this symbol will appear in the instrument panel.

Slippery road alerts

If your own car detects reduced friction between your tires and the road, information on this can be sent to vehicles approaching your own car's position.

As the vehicle approaches the area affected, this symbol will be displayed in the instrument panel to alert the driver of slippery road conditions. Drivers of other vehicles receiving information via Connected Safety will receive similar notifications as they approach the area.

✓ Warning

- The function is supplementary driver support intended to facilitate driving and help make it safer it cannot handle all situations in all traffic, weather and road conditions.
- The driver is advised to read all sections in the Owner's Manual about this function to learn of its limitations, which the driver must be aware of before using the function.
- Driver support functions are not a substitute for the driver's attention and judgment. The driver is always responsible for ensuring the vehicle is driven in a safe manner, at the appropriate speed, with an appropriate distance to other vehicles, and in accordance with current traffic rules and regulations.

^[1] Not available in all markets.

^[2] There may be a charge for transmitting data over the Internet, depending on your service plan.

13.5.1.2. Apps

The App view contains apps that provide access to certain vehicle services.

Swipe the center display screen from right to left^[1] to access the App view from the Home view. This view displays down-
loaded apps (third-party apps) as well as apps for integrated functions, such as FM radio.

App view. (generic illustration; basic apps vary depending on market and model)

Several basic apps are always available. More apps such as web radio and music services can be downloaded when the car is connected to the Internet.

Some apps can only be used when the vehicle is connected to the Internet.

Start an app by tapping it.

All apps used should be updated to the latest version.

^[1] Applies for left-hand drive vehicles. For right-hand drive vehicles, swipe in the other direction.

13.5.1.3. Terms of use and data sharing

The first time certain services and apps are started, a pop-up window with the heading **Terms and conditions** and **Data sharing** may open.

The aim is to inform the user about Volvo's terms of use and data sharing policy. By accepting data sharing, the user accepts that certain information will be sent from the vehicle. This is required for certain services and apps to work with full functionality.

The data sharing function for connected services and apps is disabled by default^[1]. For certain connected services and apps in the vehicle to work, data sharing must be activated. Data sharing can be set from the center display's settings menu or when the services or apps are started in the center display.

Privacy and data sharing

The software update that became available in November 2017 introduced privacy and data sharing settings for connected services and downloaded apps. These settings can be found under **Privacy and data** in the settings menu in the vehicle's center display.

There, you can choose which connected services will be allowed to share data. Data sharing for downloaded apps can also be disabled there. Note that services and apps cannot be used as intended if data sharing is disabled.

After a factory reset or e.g. a workshop visit or a software update, your data sharing preferences may be reset to default settings. You will then need to reactivate data sharing for connected services and downloaded apps.

(i) Note

Settings for privacy and data sharing are unique for each driver profile.

^[1] Does not apply to Volvo On Call.

13.5.1.4. Activating and deactivating data sharing

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note. 758 / 1010 Data sharing for relevant services and apps can be set via the Settings menu in the center display.

- 1 Tap Settings in the center display's Top view.
- 2 Tap System → Privacy and data.
- 3 Select to activate or deactivate data sharing for individual services and all apps.

If data sharing for a connected service or downloaded apps is not activated, this can be done when they are started in the center display. If this is the first time that a service is started, or e.g. after a factory reset or certain software updates, Volvo's terms and conditions for connected services must be accepted. Note that data sharing will then also be activated for other services or apps that sharing has already been accepted for.

(i) Note

After visiting a Volvo workshop, you may need to reactivate data sharing so that services and apps will work again.

13.5.1.5. Data sharing for Volvo On Call

Data sharing for the Volvo On Call service is enabled by default. This means that you do not need to enable data sharing for the service when you buy a new vehicle or e.g. after a factory reset.

You can choose to disable data sharing for Volvo On Call. Note that most Volvo On Call functions need to be able to share data in order for you to use them. If you have paired the Volvo Cars app with your vehicle, a notification will be displayed in the app if the data sharing function is disabled for Volvo On Call.

The data sharing settings are only enabled by default for your Volvo On Call services. Data sharing will remain disabled for your other connected services and downloaded apps and will need to be enabled in order to be used.

13.5.1.6. Driver profile data sharing

When you begin using a new driver profile, the data sharing preferences for the profile will be set to the vehicle's default settings and be disabled.

If you want to begin using a new driver profile, data sharing must be enabled for the connected services the profile wants to use. This applies even if you have previously enabled data sharing for connected services for other driver profiles.

Sometimes, after a workshop visit or after a software update, some settings in your vehicle may be reset to their default settings. Because the data sharing settings are unique to each driver profile, data sharing must be reactivated individually for each profile.

(i) Note

When you buy a Volvo, the dealer can often provide assistance with settings in the vehicle and go through the various setting options with you. Among other things, this could mean that data sharing was already activated for connected services in the new car at the time of delivery.

If you then begin using a new driver profile, the data sharing settings for the new profile will be deactivated and must then be activated for the connected services you want to use. This also applies to data sharing settings for downloaded apps.

Checking which driver profile is being used

The data sharing settings may be different for different driver profiles in your vehicle. For example, one profile may have data sharing enabled for only one connected service, while another has the function enabled for all services and downloaded apps.

If you find that some apps or connected services do not seem to be working as they should in your vehicle, e.g. if you are repeatedly asked to allow data sharing for certain functions, check which driver profile is active and for which services the profile has activated data sharing.

You can change driver profile under **Profile** in Top view in your center display.

You can always choose to enable data sharing for the connected services you want to be able to use in a driver profile, but if the profile has protected and saved its settings, all of the changes you make will be temporary. This is because all settings for a protected driver profile will revert to the latest saved settings when the vehicle is switched off and locked.

To save changes made in a protected driver profile, go to Settings \rightarrow System \rightarrow Driver Profiles \rightarrow Edit Profile in your center display and tap the button at the bottom of the screen to save changes for the profile.

13.5.1.7. Data sharing for services

If you haven't activated data sharing for a connected service or for downloaded apps, you can do this when you start them in your center display. The first time that you start a service, or e.g. after a factory reset or certain software updates, you will also need to accept Volvo's terms and conditions for connected services.

Enabling data sharing when starting a service

- 1 Select the function or service you want to activate.
- > If this is the first time you are using the service or after e.g. a factory reset or certain software updates, you will first need

to accept Volvo's terms and conditions for connected services in order to continue.

Terms and	conditions
To use the function RT Information, you have to Terms & Conditions for Functions.	TI – Real Time Traffic o agree to Volvo Cars ⁻ Connected
Read the Terms and Co and Customer Privacy f support.volvocars.com.	onditions for services Policy at
Accept	Decline

2 Accept data sharing for the service or cancel.

If you choose to accept, data sharing will be enabled and you can begin using the service.

Enabling data sharing when starting an app

To accept data sharing for an app that needs the function, start the app and tap **accept** in the pop-up window.

You can disable data sharing for services and apps in the settings menu under System -> Privacy and data -> Data Sharing.

13.5.1.8. Volvo ID

Volvo ID is a personal ID that gives you access to a range of services using a single username and password.

(i) Note

The available services can vary over time and depend on equipment level and market.

One example of a service in which a Volvo ID is needed is to check the vehicle via your phone using the Volvo Cars app^[1].

(i)Note

If the username/password for a service (e.g. Volvo On Call) is changed, the change will also automatically be applied to other services.

A Volvo ID can be created from the vehicle, at volvoid.eu.volvocars.com/Account [https://volvoid.eu.volvocars.com/Account/] or in the Volvo Cars app.

When a Volvo ID is registered in the vehicle, additional services are available. Multiple Volvo IDs can be used for the same vehicle, and multiple vehicles can be linked to the same Volvo ID.

* Option/accessory.

^[1] For Volvo On Call* users.

13.5.1.9. Creating a Volvo ID

A Volvo ID can be created in various ways. If your Volvo ID was created on volvoid.eu.volvocars.com/Account [https://volvoid.eu.volvocars.com/Account/] or with the Volvo Cars app, the Volvo IDmust also be registered to the vehicle to enable access to the Volvo ID services.

Creating a Volvo ID with the Volvo ID app

- Download the Volvo ID app from Download Center in the center display's App view. 1
- Start the app and register a personal email address or a cellular phone number. 2
- Follow the instructions that will be sent automatically to this email address/cell phone number. 3
- > A Volvo ID has now been created and is automatically registered to the vehicle. The Volvo ID services can now be used.

Creating a Volvo ID with the Volvo Cars app

- Download the latest version of the Volvo Cars app to your phone^[1]. 1
- Choose to create a Volvo ID. 2

- **3** The website for creating a Volvo ID will appear.
- 4 Enter a personal email address or cell phone number.
- 5 Follow the instructions that will be sent automatically to this email address/cell phone number.
- > A Volvo ID is created and ready for use.

Creating a Volvo ID on the Volvo Cars website

- 1 Go to volvoid.eu.volvocars.com/Account [https://volvoid.eu.volvocars.com/Account/]. Choose to create a Volvo ID.
- 2 Enter a personal email address or cell phone number.
- 3 Follow the instructions that will be sent automatically to this email address/cell phone number.
- > A Volvo ID is created and ready for use.

Registering your Volvo ID to the vehicle

If your Volvo ID was created using the Volvo Cars app, follow these steps to register the ID to the vehicle:

1 If you have not already done so, download the Volvo ID app from Download Center in the center display's App view.

(i) Note

To download apps the vehicle must be connected to the internet.

- 2 Start the app and enter your Volvo ID.
- **3** Follow the instructions that will be automatically sent to the email address/cell phone number connected to your Volvo ID.
- > Your Volvo ID has now been registered to the vehicle. The Volvo ID services can now be used.

^[1] Can be downloaded from e.g. the Apple App Store or Google Play.

13.5.1.10. Real Time Traffic Information (RTTI)

When the vehicle is connected to the Internet, the driver can access enhanced traffic information^[1] (RTTI^[2]) about traffic congestion, closed roads and other circumstances that could affect travel time.

If the RTTI service is activated, information about traffic events and flow is continuously retrieved from an online service. When a vehicle requests traffic flow information, anonymous data about traffic flow in the vehicle's location is also provided, which helps enable the service to function. Anonymous data is only sent when RTTI is activated. If the service is not activated, no data will be provided.

The service may need to be reactivated e.g. following certain software updates, after a workshop visit or when creating a new driver profile.

Current traffic information is shown in the navigation system * for highways/freeways, major roads, secondary roads and in some cases urban routes.

The amount of traffic information shown on the map depends on the distance to the vehicle and is only shown within approximately 120 km (75 miles) from the vehicle's location.

Text and symbols on the map are displayed in the usual way and the traffic flow shows how fast the traffic is moving on a road in comparison with the road's speed limit. The traffic flow is shown on the map on each side of the road with a colored line in each direction.

- Green no disturbances.
- Orange slow-moving traffic.
- Red congestion/traffic jam/accident.
- Black road closed.

(i) Note

Traffic information is not available in all areas/countries.

Coverage areas for traffic information is continuously extended.

^[1] Certain markets only.

- ^[2] Real Time Traffic Information
- * Option/accessory.

13.5.1.11. Volvo On Call

Volvo On Call provides direct contact with the vehicle and extra comfort and assistance 24 hours a day.

The functions are available via the Volvo Cars app^[1] and the ON CALL and SOS buttons in the vehicle's ceiling console:

It is possible to lock and unlock the vehicle directly from a phone or other connected device via the Volvo Cars app. In the event of an accident, emergency assistance (ambulance, police, etc.) can be summoned to the vehicle. In less critical situations, e.g. a flat tire, roadside assistance can be called out.

(i) Note

The SOS button should only be used in case of accident, illness or if there is an external threat to the vehicle and its passengers. The SOS function is only intended for emergency situations. Misuse could incur extra charges.

The Volvo Cars app and ON CALL button can be used for all other services, including roadside assistance.

The Volvo On Call system

Volvo On Call is connected to the vehicle's safety and alarm systems and to other systems in the vehicle, such as lock and climate systems. The vehicle has an integrated modem for communication with the Volvo On Call customer service center and the Volvo Cars app. The Global Navigation Satellite System (GNSS) is used to locate the vehicle.

Personal data processing

In order to provide you with all the functions of the Volvo On Call service, certain information, including personal data, must be processed. Read more about terms and conditions and privacy at <u>volvocars.com/intl/legal</u> [https://www.volvocars.com/intl/legal].

Contacting the customer service center

The vehicle's ON CALL button or the Volvo Cars app is used to contact the Volvo On Call customer service center.

(i) Note

All calls to Volvo On Call customer service center may be recorded.

^[1] Available functions vary from market to market.

13.5.2. Tips when using a Bluetooth connection

If you find that connection or functionality between your vehicle and your Bluetooth device are not working as expected, the following tips may be of help.

When connecting a mobile device to the vehicle via Bluetooth

If you are having difficulty connecting a mobile device to the vehicle via Bluetooth:

- Make sure the device's battery is sufficiently charged (at least 50% charge level is recommended)
- Make sure Bluetooth is enabled in both your device and in the vehicle
- Make sure you have established a Bluetooth connection and connected the vehicle to the device you want to use
- If possible, try connecting another device to the vehicle through Bluetooth to check if the problem is with the device or in the vehicle

If the problem persists:

- 1. Delete all previously added devices under the Bluetooth settings in the vehicle
- 2. Restart the device you want to connect
- 3. Try connecting the device again

Media playback via Bluetooth

If you are having difficulty playing media in the vehicle via a mobile device:

- Try restarting the app or the source you want to play media from
- If possible, try playing media from a different source than the mobile device to check if the problem is with the source or the device
- Move the device to a new location to see if playback works better there
- Close any apps open in the background
- Restart the device you want to play media from

If none of the above seem to help, check the Bluetooth connection between the mobile device and the vehicle. See section "When connecting a mobile device to the vehicle via Bluetooth".

Audio system volume

If you find that the sound level is lower than expected when you use the handsfree function via Bluetooth, check first to see if the sound settings on your mobile device need to be adjusted before raising the volume of the vehicle's audio system.

i Note

For some phones, the phone's Bluetooth volume must be manually set to 100% for the audio volume in the vehicle to be sufficiently high. This setting needs to be adjusted for each connected phone. The setting is adjusted separately for phone calls and media streaming. The system will then remember the setting and it will not need to be repeated the next time the phone is connected.

13.5.3. Connecting the vehicle to the Internet via a Bluetooth-connected phone

Establish an Internet connection using Bluetooth and tethering from a phone and get access to multiple connected services in your vehicle.

- 1 To connect the vehicle to the Internet via a Bluetooth-connected phone, the phone must first be paired with the vehicle via Bluetooth.
- 2 Make sure that the phone supports Internet sharing (tethering) and that the function is activated. In an iPhone, the function is called "personal hotspot". In Android phones, the function can have different names, but is often called "hotspot". For iPhone phones, the "personal hotspot" menu page must also be open until the Internet connection has been made.
- 3 If the phone has been connected via Bluetooth previously, tap **Settings** in the center display's Top view.
- 4 Tap Communication → Bluetooth Devices.
- 5 Mark the window for Bluetooth Internet connection under the heading Internet connection.
- 6 If a different connection is being used, confirm the connection change.
- > Your vehicle is now connected to the Internet via your Bluetooth-connected phone.

(i) Note

The cellular phone and network operator must support tethering (sharing of Internet connection) and the subscription must include data traffic.

(i) Note

When using Apple CarPlay, it is only possible to connect the vehicle to the Internet using Wi-Fi or the vehicle's modem.

13.5.4. Internet-connected vehicle*

When the vehicle is connected to the Internet, it is possible to use web radio and music services via apps, download software and contact retailers from the vehicle.

The vehicle can be connected to the Internet using Bluetooth, Wi-Fi or the vehicle's integrated modem (SIM card).

When the vehicle is connected to the Internet, it is possible to share the vehicle's Internet connection (Wi-Fi hotspot) so that other devices, e.g. tablets, can access the Internet^[1].

The Internet status is shown by a symbol in the center display's status bar.

(i) Note

Data (data traffic) is transfered when using the internet, which can incur additional costs.

Activating data roaming can cause additional charges.

Contact your network operator about data traffic costs.

(i) Note

When using Apple CarPlay, it is only possible to connect the vehicle to the Internet using Wi-Fi or the vehicle's modem.

(i) Note

When using Android Auto, it is possible to connect the vehicle to the Internet using Wi-Fi, Bluetooth or the vehicle's modem.

Before the vehicle is connected to the Internet, search for support information about terms and conditions for services and the customer privacy policy at volvocars.com [https://www.volvocars.com/].

* Option/accessory.

^[1] This is not possible when the vehicle is connected to another Wi-Fi hotspot.

13.5.5. Tips for handling Internet connection problems

Here are some tips that may be useful if you are having difficulty connecting the vehicle to the Internet.

- If the clock has been reset, e.g. after the current to the battery has been cut in the event of visiting a service workshop, you Ð must reset the clock before you can connect to the internet.
- Certain phones switch off Internet sharing after contact with the vehicle has been broken, for example if the phone that Ð shares the Wi-Fi network is removed from the vehicle. To reconnect to the Internet, activate tethering (portable/personal hotspot) in the phone.
- Volvo On Call-connected vehicles can connect to the Internet using the vehicle modem (P-SIM). If the connection is broken, the vehicle will automatically attempt to reconnect to the Internet.

13.5.6. Sharing Internet from the vehicle via Wi-Fi hotspot (tethering)

When the vehicle is connected to the Internet, other devices may share the vehicle's Internet connection^[1].

1	*			09:46
	Communication Vehicle Wi-Fi hotspot			
	Vehicle Wi-Fi hots			
	Network name 6-32 characters	MyVolvoxgM2yD		×
	Password 10-63 characters	D6AD6I1wRuacoS		×
	Frequency band		2.4 GHz	>
	Connected device			
	€ Back			X Close
2	B₀c P	X AUTO		24℃

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note. 770 / 1010 The network service provider (SIM card) must support Internet sharing (tethering).

- 1 Tap Settings in the Top view.
- 2 Tap Communication → Vehicle Wi-Fi Hotspot.
- **3** Tap **Network name** to assign a name to the hotspot.
- 4 Tap Password and create a password. This password can then be used to connect other devices to this hotspot.
- **5** Tap **Frequency band** and select a frequency for the hotspot to use to transmit data. Please note that selecting a frequency is not possible on all markets.
- 6 Activate/deactivate by tapping to check/uncheck the Vehicle Wi-Fi Hotspot box.
- 7 If Wi-Fi is being used to connect to the Internet, confirm the change of connections.
- > It is now possible for external devices to connect to the vehicle's Wi-Fi hotspot.

(i) Note

Activation of Wi-Fi hotspot can cause additional charges from your network operator.

Contact your network operator about data traffic costs.

The connection status is shown by a symbol in the center display's status bar.

Tap Connected devices to see a list of currently connected devices.

^[1] This does not apply when the vehicle is connected to the Internet via Wi-Fi.

13.5.7. Connecting the vehicle to the Internet via a phone (Wi-Fi)

Establish an Internet connection using Wi-Fi through Internet sharing (tethering) from a phone and get access to the connected services in your vehicle.

- 1 Make sure that the phone supports Internet sharing (tethering) and that the function is activated. In an iPhone, the function is called "personal hotspot". In Android phones, the function can have different names, but is often called "hotspot". For iPhone phones, the "personal hotspot" menu page must also be open until the Internet connection has been made.
- 2 Tap Settings in the Top view.
- 3 Proceed to Communication \rightarrow Wi-Fi.
- **4** Activate/deactivate by tapping to check/uncheck the Wi-Fi box.
- **5** If a different connection is being used, confirm the connection change.
- 6 Tap the name of the network you would like to connect.
- 7 Enter the network password.
- > The vehicle will connect to the network.

Please note that certain cellular phones will disable Internet sharing (tethering) when the connection to the vehicle has been broken, e.g. when the phone has been removed from the vehicle. The phone's tethering function will then need to be reactivated the next time the phone's hotspot is used to connect to the Internet.

When a phone is connected to the vehicle, it will be saved for future use. To display a list of saved networks or to manually delete saved networks, tap Settings \rightarrow Communication \rightarrow Wi-Fi \rightarrow Saved networks.

(i) Note The cellular phone and network operator must support tethering (sharing of Internet connection) and the subscription must include data traffic. Wi Fi Technical and security requirements for Wi-Fi connection are described in a separate section. 13.5.8. Connecting the vehicle to the Internet via vehicle modem (SIM card) It is possible to establish an Internet connection via the vehicle modem and a personal SIM card (P-SIM).

Vehicles equipped with Volvo On Call will use the vehicle modern Internet connection for the services.

1

Insert a personal SIM card in the holder under the floor of the cargo compartment. Note that the vehicle's card reader requires mini SIM cards.

- Tap Settings in the Top view. 2
- 3
- Activate/deactivate by tapping to check/uncheck the Vehicle modem Internet box. 4
- If a different connection is being used, confirm the connection change. 5
- Enter the SIM card's PIN code. 6
- > The vehicle will connect to the network.

(i) Note

Please note that the SIM card used for Internet connection via P-SIM cannot have the same telephone number as the SIM card used in the cellular phone. If the same card is used for both, phone calls will not be connected properly to the cellular phone. Use a SIM card with a separate phone number for the Internet connection or a data card that does not handle phone calls and can therefore not interfere with phone function.

13.5.9. Vehicle modem settings

Your vehicle is equipped with a modem that can be used to connect the vehicle to the Internet. It is also possible to share this Internet connection over Wi-Fi.

Tap Settings in the Top view. 1

- 2 Tap Communication --- Vehicle Modem Internet and select settings:
- Vehicle modem Internet select this to use the vehicle's modem to connect to the Internet.
- Data usage. tap Reset to reset the counter for the amount of data received and sent.
- Network

Select carrier - select a service provider manually or automatically.

Data roaming - if the box is checked, the vehicle modern will attempt to connect to the Internet when the vehicle is outside its home network (e.g. if you are in another country). Please note that this could entail additional charges. Consult with your service provider for data roaming terms under your contract.

SIM card PIN

Change PIN - a maximum of 4 digits can be entered. Disable PIN - select whether a PIN code will be required to access the SIM card.

• Send request code - used to e.g. download or check the balance remaining on a prepaid phone card. This function is specific to your service provider.

(i) Note

Please note that the SIM card used for Internet connection via P-SIM cannot have the same telephone number as the SIM card used in the cellular phone. If the same card is used for both, phone calls will not be connected properly to the cellular phone. Use a SIM card with a separate phone number for the Internet connection or a data card that does not handle phone calls and can therefore not interfere with phone function.

13.5.10. No or poor Internet connection

Factors affecting the Internet connection.

The amount of data transmitted depends on the services or apps currently in use in the vehicle. Streaming music, for example, involves the transmission of a large amount of data, and this requires a good connection and a strong signal.

Phone to vehicle

Internet connection speed may vary depending on the location of the cellular phone in the vehicle. Move the phone closer to the center display to increase signal strength. Make sure that nothing is between the phone and center display that could be block-ing the signal.

Phone to network operator

The speed of the mobile network varies depending on the coverage in the vehicle's current location. Coverage may be poorer in e.g. tunnels, mountainous areas, deep valleys or indoors. Connection speed is also dependent on the subscription you have with your service provider.

(i) Note

If you experience any problems with data traffic, contact your network service provider.

Restarting the phone

If you experience any Internet connection problems, it may help to restart your phone.

13.5.11. Deleting Wi-Fi networks

Networks that are not needed can be deleted.

- 1 Tap Settings in the Top view.
- 2 Proceed to Communication -> Wi-Fi -> Saved networks.
- 3 Tap Forget to delete the network.
- 4 Confirm the selection.
- > The vehicle will no longer connect to the deleted network.

Deleting all networks

All networks can be deleted at once by performing a factory reset. Please note that all user data and system settings will be restored to original default factory settings.

13.5.12. Wi-Fi technology and security

Networks must meet certain criteria in order for the vehicle to connect.

It is possible to connect to the following types of networks:

- Frequency 2.4 or 5 GHz^[1].
- Standards 802.11 a/b/g/n.
- Security type WPA2-AES-CCMP.

The vehicle's Wi-Fi system is designed to handle Wi-Fi devices inside the vehicle.

Performance may be impaired if multiple devices are using a frequency at the same time.

13.6. Audio, media and Internet

The audio and media system consists of a media player and a radio. A cellular phone can also be connected through Bluetooth to use hands-free functions or play music in the vehicle. When the vehicle is connected to the Internet, it is also possible to use apps to play media.

Audio and media overview

The functions can be controlled using voice commands, the steering wheel keypad or the center display. The number of speakers and amplifiers varies depending on the audio system installed in the vehicle.

System updates

The audio and media system is continuously improved. It is recommended to download system updates as soon as they are available.

13.7. License agreement for audio and media

A license is an agreement on the right to conduct a certain activity or the right to use someone else's right according to terms and conditions specified in the agreement. The following texts are Volvo's agreements with manufacturers/developers.

Dirac Unison®

Dirac Unison co-optimizes the loudspeakers in frequency, time and space for the best possible bass integration and clarity. It enables a faithful reproduction of the acoustic characteristics of specific performance venues. Using advanced algorithms, Dirac Unison controls all loudspeakers digitally based on acoustic high-precision measurements. Like a conductor of an or-chestra, it guarantees that the loudspeakers perform in perfect unison.

DivX®

DivX[®], DivX Certified[®] and associated logos are trademarks of DivX, LLC and are used under license.

This DivX Certified[®] device can play DivX[®] Home Theater video files up to 576p (including .avi, .divx). Download free software at <u>www.divx.com</u> to create, play and stream digital video.

ABOUT DIVX VIDEO-ON-DEMAND: This DivX Certified[®] device must be registered in order to play purchased DivX Video-on-Demand (VOD) movies. To obtain your registration code, locate the DivX VOD section in your device setup menu. Go to <u>vod.divx.com</u> for more information on completing the registration process.

Patent number

Covered by one or more of the following patents in the US: 7,295,673; 7,460,668; 7,515,710; 8,656,183; 8,731,369; RE45,052.

Gracenote®

Portions of the content are copyright © of Gracenote or its providers.

Gracenote, the Gracenote logo and logotype, "Powered by Gracenote" and Gracenote MusicID are either registered trademarks or trademarks of Gracenote, Inc. in the United States and/or other countries.

Gracenote[®] End User License Agreement

This application or device contains software from Gracenote, Inc. in Emeryville, California, United States ("Gracenote"). The software from Gracenote (the "Gracenote Software") enables this application to perform disc and/or file identification and obtain music-related information, including name, artist, track, and title information ("Gracenote Data") from online servers or embedded databases (collectively "Gracenote Servers") and to perform other functions. You may use Gracenote Data only by means of the intended End-User functions of this application or device.

You agree that you will use Gracenote Data, the Gracenote Software, and Gracenote Servers for your own personal non-commercial use only. You agree not to assign, copy, transfer or transmit the Gracenote Software or any Gracenote Data to any third party. YOU AGREE NOT TO USE OR EXPLOIT GRACENOTE DATA, THE GRACENOTE SOFTWARE, OR GRACENOTE SERVERS, EXCEPT AS EXPRESSLY PERMITTED HEREIN.

You agree that your non-exclusive license to use the Gracenote Data, the Gracenote Software, and Gracenote Servers will terminate if you violate these restrictions. If your license terminates, you agree to cease any and all use of Gracenote Data, the

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note. 778 / 1010 Gracenote Software, and the Gracenote Servers. Gracenote reserves all rights in all Gracenote data, all Gracenote software and all Gracenote servers, including all ownership rights. Under no circumstances will Gracenote become liable for any payment to you for any information that you provide. You agree that Gracenote, Inc. may enforce its rights under this Agreement against you directly in its own name.

The Gracenote service uses a unique identifier to track queries for statistical purposes. The purpose of a randomly assigned numeric identifier is to allow the Gracenote service to count queries without knowing anything about who you are. For more information, see the web page for the Gracenote Privacy Policy for the Gracenote service.

The Gracenote software and each item of Gracenote data are licensed to you "AS IS." Gracenote makes no representations or warranties, express or implied, regarding the accuracy of any Gracenote data from in the Gracenote servers. Gracenote reserves the right to delete data from the Gracenote Servers or to change data categories for any cause that Gracenote deems sufficient. No warranty is made that the Gracenote Software or Gracenote Servers are error-free or that functioning of Gracenote Software or Gracenote is not obligated to provide you with new enhanced or additional data types or categories that Gracenote may provide in the future and is free to discontinue its services at any time.

13.8. Hard disk storage space

It is possible to view how much space is remaining on the vehicle's hard disk.

Storage information for the vehicle's hard disk can be shown, including total capacity, available capacity and how much space is used for installed apps. The information is found under Settings \rightarrow System \rightarrow System Information \rightarrow Storage.

13.9. Sound settings

Sound reproduction quality is preset but can also be adjusted.

The system's volume is normally adjusted using the volume control below the center display or the right-side steering wheel keypad. This applies, for example, when playing music or the radio or during phone calls and active traffic messages.

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note. 784 / 1010

(i) Note

For some phones, the phone's Bluetooth volume must be manually set to 100% for the audio volume in the vehicle to be sufficiently high. This setting needs to be adjusted for each connected phone. The setting is adjusted separately for phone calls and media streaming. The system will then remember the setting and it will not need to be repeated the next time the phone is connected.

Sound reproduction

The audio system is precalibrated using digital signal processing. This calibration takes into account speakers, amplifiers, passenger compartment acoustics, listener position, etc. for each combination of vehicle model and audio system. There is also a dynamic calibration that takes into account the volume control setting and the vehicle's speed.

Personal settings

Different settings are available in Top view under Settings -> Sound depending on the vehicle's sound system.

Premium Sound* (Harman Kardon)

- Equalizer setting of equalizer.
- Balance balance between right/left and front/rear speakers.
- System Volumes adjusts volume in the various systems of the car, e.g. Voice Control, Park Assist and Phone Ringtone.

High Performance

- Tone setting for e.g. bass, treble, equalizer, etc.
- Balance balance between right/left and front/rear speakers.
- System Volumes adjusts volume in the various systems of the car, e.g. Voice Control, Park Assist and Phone Ringtone.
- * Option/accessory.

13.10. Sound experience*

Sound experience is an app that provides access to additional sound settings.

Open Sound Experience from the center display's App view. The following settings are possible:

- Seat Optimization sound settings can be adjusted to be primarily adapted for Driver, All and Rear.
- Surround surround sound mode with level settings.
- Tone setting for e.g. bass, treble, equalizer, etc.

13.11. Customer Privacy Policy

Volvo respects and safeguards the personal privacy of everyone who visits our websites.

This policy refers to the handling of customer data and personal information. The purpose is to give current, past and potential customers a general understanding of:

- The circumstances in which we collect and process your personal data.
- The types of personal data we collect.
- Why we collect your personal data.
- How we process your personal data.

For more information on the policy, search for support information on volvocars.com [https://www.volvocars.com/].

13.12. Sensus - connection and entertainment

Sensus makes it possible to use apps and turn your vehicle into a Wi-Fi hotspot.

This is Sensus

Sensus provides an intelligent interface and Internet connection to the digital world. An intuitive navigation structure offers access to relevant assistance, information and entertainment when it is needed.

Sensus includes all of the solutions in the vehicle related to entertainment, Internet connection and navigation*, and serves as the user interface between the driver and the vehicle. Sensus is what makes communication between you, the vehicle and the world around you possible.

Information when it's needed, where it's needed

The vehicle's displays present the right information at the right time. Information is presented in different displays depending on how it should be prioritized by the driver.

Different types of information are shown in different displays depending on how the information should be prioritized.

Instrument panel

Instrument panel^[1].

The instrument panel displays information such as speed, incoming phone calls or the track currently playing. It is controlled using the steering wheel keypads.

Center display

Many of the vehicle's main functions are controlled from the center display, a touchscreen that reacts to taps and other gestures. This minimizes the number of physical buttons and controls needed in the vehicle. The screen can also be operated while wearing gloves.

The center display is used to control e.g. the climate and entertainment systems and to adjust the power seats*. The information presented in the center display can be handled by the driver or by someone else in the vehicle.

Voice control system

The voice control system enables the driver to control certain vehicle functions without taking their hands off the wheel. The system can understand natural speech. Use voice control to e.g. play a song, make a phone call, increase the temperature in the passenger compartment or have a text message read aloud.

* Option/accessory.

^[1] The illustration is generic - details may vary according to vehicle model.

13.13. Terms and Conditions for Services

Volvo offers services that help enhance the vehicle's safety and comfort.

These services comprise everything from assistance in emergencies to navigation and various maintenance services.

Before using the services, it is important to read support information about terms and conditions for the services at volvocars.com [https://www.volvocars.com/].

14.1. Volvo On Call services

14.1.1. Assistance with Volvo On Call

Volvo On Call can provide extra security and assistance in the event of a flat tire, breakdown, accident, etc.

Volvo On Call not only offers extra comfort and control via the Volvo Cars app, but also a number of assistance services via the SOS and ON CALL buttons in the ceiling, such as emergency assistance in the event of an accident, theft notification, help during a trip and remote door unlock.

14.1.2. Emergency assistance with Volvo On Call

In the event of an emergency, press the SOS button to contact the Volvo On Call customer service center or an emergency service center.

Volvo On Call Customer service center

To summon assistance in the event of an illness or an external threat to the vehicle or passengers, the Volvo On Call customer service center can be alerted manually by pressing and holding the SOS button for at least 2 seconds. The vehicle will contact the Volvo On Call customer service center and a message will be sent containing information such as the vehicle's location.

- 1 The Volvo On Call customer service center will then attempt to establish voice contact with the driver to determine the extent of the emergency and the need for assistance.
- 2 The Volvo On Call customer service center will then contact the appropriate emergency service (police, ambulance, tow truck, etc.).

If voice contact cannot be established, the Volvo On Call customer service center will contact emergency services for appropriate action.

Emergency number

When the collision alarm has been activated, the system will attempt to establish contact with the country's Volvo On Call customer service center. If this is not possible, the call will go directly to the emergency phone number for the country/region in which the vehicle is currently located. The ON CALL and SOS buttons can be deactivated when the vehicle's ignition is in mode I, II or if the engine is running:

- 1 Tap Settings.
- 2 Tap Communication → Volvo On Call.
- 3 Select SOS/On Call button lock to deactivate.

14.1.3. Automatic Crash Notification with Volvo On Call

In the event of a collision, the vehicle can automatically notify the Volvo On Call customer service center, or an emergency service center, which can then summon emergency assistance.

Volvo On Call Customer service center

If any of the vehicle's safety systems are triggered, for example in an accident in which the activation level is reached for seat belt tensioners or airbags, the vehicle will automatically contact the Volvo On Call customer service center and a message will be sent containing the vehicle's location and other information.

- 1 The Volvo On Call customer service center will then attempt to establish voice contact with the driver to determine the extent of the accident and the need for assistance.
- 2 The Volvo On Call customer service center will then contact the appropriate emergency service (police, ambulance, tow truck, etc.).

If voice contact cannot be established, the Volvo On Call customer service center will contact emergency services for appropriate action.

Emergency number

When the collision alarm has been activated, the system will attempt to establish contact with the country's Volvo On Call customer service center. If this is not possible, the call will go directly to the emergency phone number for the country/region in which the vehicle is currently located.

14.1.4. Remote Vehicle Immobilizer (RVI) with Volvo On Call

If the vehicle is stolen, an immobilizer can be activated remotely.^[1]

If the vehicle has been stolen, the owner can contact the Volvo On Call customer service center via the Volvo Cars app or the authorities.

(i) Note

This applies even if the vehicle has been opened and stolen using the associated remote key.

After consulting with the authorities, the Volvo On Call customer service center can deactivate the keys to prevent the vehicle from being started. A deactivated vehicle can only be restarted through contact with the Volvo On Call customer service center and verification of PIN code. The Volvo On Call customer service center will then reactivate the remote keys.

^[1] Only where law permits and in cooperation with proper authorities.

14.1.5. Remote Door Unlock (RDU) with Volvo On Call

If the vehicle's key has been lost or locked in the vehicle, the doors can be unlocked remotely within 5 days with assistance from the Volvo On Call customer service center.

- 1 Contact the Volvo On Call customer service center via the Volvo Cars app.
- 2 After confirming that the caller requesting the remote unlock is the vehicle owner or another authorized person by verifying the PIN code, the Volvo On Call customer service center will send a signal to unlock the vehicle.
- 3 Press lightly on the rubberized button on the underside of the tailgate handle to unlock the vehicle.
- > All doors can now be opened normally.

(i) Note

If the rubberized button on the tailgate is not pressed within the time set by the Volvo On Call customer service center, the vehicle will be relocked.

(i) Note

If the vehicle is in a parking garage or similar enclosed area, the remote unlock function may be limited due to poor signal reception.

14.1.6. Stolen Vehicle Tracking (SVT) with Volvo On Call

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note. 791 / 1010 If you suspect the vehicle has been stolen, you can contact the Volvo On Call customer service center using the Volvo Cars app for assistance locating the vehicle.

If the vehicle has been stolen or otherwise used without permission, the vehicle's owner, police and Volvo On Call service center can agree to track the vehicle.

(i) Note

This applies even if the vehicle has been opened and stolen using the associated remote key.

The following needs to be done:

- 1 Contact Volvo On Call service center and say that you need help tracking the vehicle. Tracking begins.
- 2 File a police report.
- 3 Contact the Volvo On Call service center again and give them the police case number.
- **4** Volvo On Call service center notifies the police of the vehicle's location.

(i) Note

For the vehicle to be tracked, a police report must be made. Volvo On Call only gives information to the police.

14.1.7. Theft notification (TN) with Volvo On Call

When the vehicle's alarm is armed, the vehicle owner will receive a message to the phone number registered with the retailer and then a push notice in the Volvo Cars app.

If you are not sure where your vehicle is, you can contact the Volvo On Call customer service center via the Volvo Cars app. If it turns out that the vehicle is being used by an unauthorized person, tracking can be started. The police will then be notified.

If the alarm is turned off using the key, the service will be interrupted.

14.1.8. Help during a trip with Volvo On Call

If you e.g. get a flat tire, run out of gas or have a dead battery, you can summon assistance using the ON CALL button or the Volvo Cars app.
Hold the ON CALL button in the ceiling depressed for at least 2 seconds to establish voice contact with the Volvo On Call customer service center. They will consult with you to determine what type of assistance is needed.

(i) Note

The SOS button should only be used in case of accident, illness or if there is an external threat to the vehicle and its passengers. The SOS function is only intended for emergency situations. Misuse could incur extra charges.

The Volvo Cars app and ON CALL button can be used for all other services, including roadside assistance.

The ON CALL and SOS buttons can be deactivated when the vehicle's ignition is in mode I, II or if the engine is running:

- 1 Tap Settings.
- 2 Tap Communication → Volvo On Call.
- 3 Select SOS/On Call button lock to deactivate.

14.1.9. Customer service via Volvo On Call

The ON CALL button can be used to contact the Volvo On Call customer service center for questions concerning vehicle usage. Operators are available for assistance 24 hours a day.

You can also reach the Volvo On Call customer service center via the \square tab in the Volvo Cars app.

14.2. Practical information about Volvo On Call

14.2.1. Getting started with Volvo On Call

Some preparations are needed before using Volvo On Call.

Activating Volvo On Call

When the vehicle is picked up, the retailer will activate the Volvo On Call system and the owner will receive an automatically generated PIN code for Volvo On Call. The PIN code is used for security reasons to identify the owner (or another authorized person such as a family member) and works as a vehicle key.

Volvo On Call subscription

For the functions to work, the vehicle must have an active Volvo On Call subscription.

The subscription is initiated when the vehicle is purchased and the system is activated. The subscription is valid for a limited time, but can be extended (the period of validity varies from market to market). The subscription can be extended in the Volvo Cars app. Make sure that you have the vehicle identification number (VIN) available.

(i) Note

Automatic Crash Notification and the SOS button function even without a subscription.

Volvo ID and connecting the Volvo Cars app to the vehicle

A Volvo ID is required to use the Volvo Cars app. Once you have created a Volvo ID, the app needs to be paired with the vehicle. Read more about this at volvocars.com/intl/support [https://www.volvocars.com/intl/support].

(i) Note

To use the services in the Volvo Cars app, the vehicle must have a valid Volvo On Call subscription and the app must be paired with the vehicle.

Buying a pre-owned vehicle with Volvo On Call

If you have purchased a pre-owned vehicle with Volvo On Call, it is important to delete the data from the previous owner and add you own details for the service to work. Visit a Volvo retailer for assistance.

14.2.2. Volvo On Call PIN code

The PIN code is used for security reasons to verify that a person is authorized to use Volvo On Call services in a particular vehicle.

The four-digit PIN code is automatically generated by the Volvo On Call customer service center or an authorized Volvo retailer and sent to the vehicle owner. The PIN code shows that the user is authorized.

Using the PIN code

For security reasons, a Volvo On Call PIN code is required for the following services:

- Linking the Volvo Cars app with the vehicle.
- Remote Door Unlock via the Volvo On Call customer service center.
- Setting up new app users for your vehicle.
- Canceling your Volvo On Call subscription via the app, e.g. if the vehicle changes owners.

If you have forgotten or want to change your PIN code

If you have forgotten or need to change the PIN code (for example, after purchasing a previously owned vehicle with Volvo On Call), contact

- a retailer or
- Volvo On Call customer service center via the ON CALL button or the Volvo Cars app.

The new code is sent to the car owner.

If an incorrect PIN code has been entered in the Volvo Cars app multiple times

If an incorrect PIN code has been entered incorrectly 10 times in a row, the account will be locked. To use the app again, a new PIN code must be selected and a new app account created following the same process used to create the previous app account.

14.2.3. Backup battery for Volvo On Call

If the main battery has no electrical current, the Volvo On Call backup battery will take over so that the system can still be used.

The backup battery has a limited lifespan. When the battery requires servicing or replacement, a message (Volvo On Call Service required) is shown in the instrument panel.

If the message persists, contact an authorized Volvo workshop.

14.2.4. Volvo On Call abroad

Volvo On Call services may vary when driving in other countries.

When you push the SOS button, you will always be connected to the Volvo On Call customer service center for the market in which the vehicle is currently located. If there is no Volvo On Call customer service center, an emergency service center will be contacted.

When you press the ON CALL button, you will always be connected to your home country's Volvo On Call customer service center.

For more information, please contact a Volvo retailer.

14.2.5. Volvo On Call availability

To save the battery, the Volvo On Call system is programmed to shut down when the vehicle is not used for long periods of time.

Volvo On Call is fully available for 5 days. On days 6-21, services such as remote-operated immobilizer and stolen vehicle tracking should be initiated via the Volvo On Call service center. ^[1] After 22 days, the system is disabled to save the battery. It resumes full availability once the vehicle has been started.

🔨 Warning

The system's services only work in areas in which Volvo On Call's partners have cellular coverage and where the technology allows.

Just as with cellular phones, atmospheric disturbances or areas with fewer transmitters, e.g. sparsely populated rural areas, can make connection impossible.

^[1] The availability of the function may vary.

14.2.6. Change of ownership with Volvo On Call

When the vehicle changes owners, there are several steps that need to be carried out to disconnect the previous owner and give the new owner access to Volvo On Call.

Selling a vehicle with Volvo On Call

The following steps should be carried out by the previous owner:

- 1 Removing the link between the vehicle and the Volvo Cars app
- 2 Reset the settings in the center display select to perform a factory reset.

Purchasing a vehicle with Volvo On Call

The following steps need to be carried out by the new owner:

- 1 Contact a Volvo retailer for assistance transferring the time remaining on the previous owner's Volvo On Call subscription. If the subscription has expired, an extension must be purchased. The Volvo retailer will auto-generate a PIN code that will be sent via email or text message. Save the PIN code in a safe place.
- 2 Pair the Volvo Cars app with the vehicle.

Change of ownership to another country

When a vehicle is purchased and imported to another country, it is important that the owner visits a retailer in the country in which the vehicle was purchased. The retailer will then delete all customer data in their systems. The owner should then contact a retailer in the country in which the vehicle is imported for assistance starting the Volvo On Call service.

14.3. Volvo Cars app

14.3.1. Volvo Cars app

The Volvo Cars app allows you to control certain functions and interact with the vehicle via your phone.^[1]

The Volvo Cars app is available for iPhone and Android phones. You can download it for free from your phone's app store. The app is updated regularly, so make sure you have the latest version installed on your phone.

Here are some of the things you can do in the app:^[2]

- Check fuel and battery level^[3], lock status and other vehicle statuses
- Lock and unlock doors
- Start and stop parking climate system
- Contact Volvo for more information
- View your account information

Current information about the Volvo Cars app is available at <u>volvocars.com/intl/support</u> [https://www.volvocars.com/intl/support].

Internet connection required

When using the Volvo Cars app, your mobile device will send and receive data via the internet. If you do not have a data plan, then your cell phone carrier may charge you for that data. If you use your app abroad you may incur data roaming charges. For further information, contact your cell phone operator.

- ^[1] Some functions require that both the vehicle and the mobile device have cellular coverage or another Internet connection.
- ^[2] Available functions vary by market and may change over time.
- ^[3] Applies to Twin Engine and Recharge models.

14.4. Data sharing for Volvo On Call

Data sharing for the Volvo On Call service is enabled by default. This means that you do not need to enable data sharing for the service when you buy a new vehicle or e.g. after a factory reset.

You can choose to disable data sharing for Volvo On Call. Note that most Volvo On Call functions need to be able to share data in order for you to use them. If you have paired the Volvo Cars app with your vehicle, a notification will be displayed in the app if the data sharing function is disabled for Volvo On Call.

The data sharing settings are only enabled by default for your Volvo On Call services. Data sharing will remain disabled for your other connected services and downloaded apps and will need to be enabled in order to be used.

14.5. Volvo On Call

Volvo On Call provides direct contact with the vehicle and extra comfort and assistance 24 hours a day.

The functions are available via the Volvo Cars app^[1] and the ON CALL and SOS buttons in the vehicle's ceiling console:

It is possible to lock and unlock the vehicle directly from a phone or other connected device via the Volvo Cars app. In the event of an accident, emergency assistance (ambulance, police, etc.) can be summoned to the vehicle. In less critical situations, e.g. a flat tire, roadside assistance can be called out.

(i) Note

The SOS button should only be used in case of accident, illness or if there is an external threat to the vehicle and its passengers. The SOS function is only intended for emergency situations. Misuse could incur extra charges.

The Volvo Cars app and ON CALL button can be used for all other services, including roadside assistance.

The Volvo On Call system

Volvo On Call is connected to the vehicle's safety and alarm systems and to other systems in the vehicle, such as lock and climate systems. The vehicle has an integrated modem for communication with the Volvo On Call customer service center and the Volvo Cars app. The Global Navigation Satellite System (GNSS) is used to locate the vehicle.

Personal data processing

In order to provide you with all the functions of the Volvo On Call service, certain information, including personal data, must be processed. Read more about terms and conditions and privacy at <u>volvocars.com/intl//legal</u>

[https://www.volvocars.com/intl/legal].

Contacting the customer service center

The vehicle's ON CALL button or the Volvo Cars app is used to contact the Volvo On Call customer service center.

(i) Note

All calls to Volvo On Call customer service center may be recorded.

^[1] Available functions vary from market to market.

14.6. Volvo On Call subscription

Volvo On Call is a subscription service. The subscription includes emergency assistance and security services as well as app services.

Volvo On Call subscription status

The status of your Volvo On Call subscription is shown in the Volvo Cars app under Vehicle information in the 🖂 tab. You can also extend the subscription from here.

If you do not have access to the Volvo Cars app, contact your retailer who can help you find information about the subscription end date. You then have to give the vehicle identification number^[1].

Message to indicate that your Volvo On Call subscription will soon be expiring

45 days before the Volvo On Call subscription is set to expire, the message Volvo On Call subscription expires soon appears in the vehicle's display. Users of the Android or iOS version of the Volvo Cars app will also receive reminders in the app.

Deactivated Volvo On Call subscription

When the subscription period has ended, the message On Call turned off will appear in the vehicle's display. The message disappears when the subscription is reactivated.

You cannot use the Volvo On Call services when the subscription has expired. However, the emergency services via the SOS button and automatic collision alert will continue to function. If you want to use Volvo On Call again, the subscription must be renewed.

Roadside assistance costs

Roadside Assistance costs are included in the first $X^{[2]}$ years when buying a new Volvo. After this time has passed, in most of the markets, Roadside Assistance is offered for free providing the car has been serviced regularly at an authorized Volvo workshop. An authorized Volvo workshop can inform you of the status of your Roadside Assistance agreement.

799 / 1010

Volvo On Call can help you get back on the road even if your Roadside Assistance agreement has expired. If this is the case, you will be asked to pay the cost for the service that is sent out to you.

(i) Note

If you do not have a valid roadside assistance agreement, additional recovery costs may apply.

^[1] Vehicle Identification Number(VIN)

^[2] Varies depending on market.

14.7. Extend Volvo On Call subscription

You can choose between different time periods^[1] when you extend or reactivate your Volvo On Call subscription.

The extension can be purchased^[1]

- in the Volvo Cars app
- via an authorized Volvo retailer
- online at store.volvocars.com. Make sure you have access to your vehicle's identification number^[2].

Extending your subscription using the Volvo Cars app

- 1 Go to the 🖃 tab.
- 2 Select Vehicle information.
- 3 Press Renew under Volvo On Call subscription.
- **4** You will be forwarded to a page where you can renew the subscription.

(i) Note

If you would like to purchase an extension **after** your subscription has expired, you must do this through your retailer since Volvo On Call must be reactivated by the retailer before you can continue using the services. This may incur additional costs. In order to use the services without interruption it is therefore advantageous to extend the subscription before it expires. The subscription is extended from and including its expiry date.

^[1] Available alternatives may vary depending on market.

14.8. Volvo On Call messages

Here are some examples of information messages that may appear when Volvo On Call is inoperative.

Discharged battery

If you receive a message that the vehicle has a discharged battery and is waiting for the Volvo On Call system to wake up, this may be because the vehicle has not been used for a long period of time.

To save the battery when the vehicle is not used for prolonged periods, the Volvo On Call with Sensus Connect system is set to standby.

The Volvo On Call with Sensus Connect subscription is about to expire

45 days before the Volvo On Call subscription is set to expire, the message Volvo On Call subscription expires soon appears in the vehicle's display. Users of the Android or iOS version of the Volvo Cars app will also receive reminders in the app.

Volvo On Call with Sensus Connect has been switched off

If the Volvo On Call subscription has expired and the Volvo On Call system has switched off, a message appears in the vehicle's display stating Volvo On Call subscription has expired.

15.1. Entering a destination

15.1.1. Entering a destination directly on the map

A destination can be specified in different ways in the navigation system^{*} – tapping a point on the map with your finger is one of them.

It is often easiest to scroll to the desired position on the map and tap it.

- 1. Make sure the map is in full-screen mode.
- 2. Scroll to the desired location on the map.
- 3. Press and hold the location. An icon will be created and a menu will appear.
- 4. Select Go here to start guidance.

Deleting the icon

To delete the location's icon:

Select Delete

Changing the icon's location

To change the location of the icon:

- Press and hold the icon, drag it to the desired location and then release it.
- * Option/accessory.

15.1.2. Entering a destination using an address

There are several ways to set a destination in the navigation system^{*}. Entering an address is one of them.

1 When the map appears, expand the toolbar using the down arrow on the left-hand side and tap Set dest.

- > The map will switch to free text search.
- 2 Tap Address.
- **3** It is not necessary to fill in all of the fields. For guidance to a city, for example, you only need to fill in the city and country. You will then be guided to the center of the city.
- **4** Select any available field and use the center display's keyboard to type:
 - Country/State/Province
 - City/Territory/Zip code
 - Address
 - Number
 - Junction

For vehicles with Volvo On Call, it is also possible to send addresses and destinations to the vehicle's navigation system via the Volvo Cars app.

* Option/accessory.

15.1.3. Entering a destination with a free text search

A destination can be set in different ways in the navigation system^{*} - with free text searching, for example, a search can be made using phone numbers, postal codes, streets, cities, coordinates and points of interest (POI^[1]).

The center display's keyboard can be used to type most characters and to search for destinations.

1 When the map appears, expand the toolbar using the down arrow on the left-hand side and tap Set dest.

- > The map will switch to free text search.
- 2 Enter a search word in the search box or limit the search results by choosing a filter.
- > The search results will be listed as you type.
- 3 If the search provided the desired result tap a search result to display its information card and select to continue using the search result.

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note. 803 / 1010 If the search provided too many results – tap Advanced filter to select a position to search around and then select a search result to continue using it:

- Around vehicle
- Around destination only displayed if a destination has been set.
- Along route only displayed if a destination has been set.
- Around point on map

Coordinates

A destination can also be entered using map coordinates.

• Enter coordinates, e.g. "N 58.1234 E 12.5678" and tap Search.

Compass directions N, E, S and W can be entered in different ways, e.g.:		
N 58,1234 E 12,5678 (with space)		
N 58,1234 E 12,5678 (without space)		
58,1234N 12,5678E (with compass directions after the coordinates)		
58,1234-12,5678 (with hyphen without compass direction)		

Either a dot [.] or a comma [] can be used.

* Option/accessory.

^[1] Point of Interest

15.1.4. Entering a POI as a destination

A destination can be specified in different ways in the navigation system * - selecting a point of interest (POI^[1]) is one of them.

1 When the map appears, expand the toolbar using the down arrow on the left-hand side and tap Set dest.

- > The map will switch to free text search.
- 2 Tap POI.
- **3** Tap the desired filter (some alternatives are only shown when a destination or waypoint is specified):
 - Near the vehicle

- Near the destination
- Near waypoint
- Along route
- Around point on map
- Scroll to the desired POI and select it. Δ
- The information card will appear.
- Select Start navigation or Add as waypoint. 5

Many POI (e.g. restaurants) have sub-categories (e.g. fast food).

Which POI are shown on the map can be changed via the map settings. This setting does not affect searches for POI to be used as destinations (even POI that have not been selected for display can be shown here as alternate destinations).

Certain POI will only appear on the map if the scale is greater than 1 km (1 mile).

(i)Note

- The symbols, number and variants of POIs vary between different markets.
- In connection with map data updating, some symbols may be added and others disappear all symbols for the map system in question can be found through the menu system.

* Option/accessory.

^[1] Point of Interest

15.1.5. Entering a destination using Recent/Favorites/Library

A destination can be specified in different ways in the navigation system* - selecting from a list is one of them.

When the map appears, expand the toolbar using the down arrow on the left-hand side and tap Set dest. 1

- The map will switch to free text search.
- Select one of these lists at the top of the screen: 2
 - Recent
 - Favorites

Library

After an option in a list has been marked, it can be added as a destination by tapping either the **Start navigation** or **Add as waypoint** button.

Recent

This is a list of previous searches. Scroll through the list and select.

This is also available as a menu option in the instrument panel and can be displayed using the right-side steering wheel keypad.

Use Edit to delete one or more items in the list.

Favorites

This is a list of the locations from the Library that have been set as favorites. Scroll through the list and select.

A position that has been deleted in Favorites will remain in Library, but with a grayed-out star. To return a position to Favorites, go to Library and mark the position's star again.

Use **Set Home address** to program a frequently used destination. An entered **Home** destination is also available as a menu option in the instrument panel and can be displayed using the right-side steering wheel keypad.

Use Edit to delete one or more items in the list.

Library

This is a list of saved locations and itineraries. The most recently saved will be shown at the top of the list.

Tap the location's star to select/deselect it as a favorite. A location with a selected (filled in) star will also be displayed under the **Favorites** heading.

If a location is deleted in Library, it will also be deleted in Favorites.

The Library can be sorted in various ways:

- Added sort in chronological order.
- Name sort in alphabetical order.
- Distance sort according to distance from the vehicle's current location.
- **Received** locations sent to the vehicle using the Send to Car function will be filtered out. New unread locations have a BLUE marker that is grayed out once the positions have been read.

Use Edit to delete one or more items in the list.

To edit a stored location in Library, mark the location in the list and select Edit position. You can, for example, change the name of the location, move it on the map by dragging and dropping it, or add a phone number or email address.

* Option/accessory.

15.1.6. Entering a destination with Send to Car

A destination can be specified in different ways in the navigation system * – using the Send to Car function is one of them.

Send destination to the vehicle

Send to Car is a function that enables you to send a destination/location to the vehicle's navigation system via the Volvo Cars app.

To use Send to Car, a Volvo ID must be registered to the vehicle.

Receiving and using a destination in the vehicle

In order for the vehicle to receive data, it must be connected to the Internet.

- 1 When the vehicle has received a destination, a notification will appear in the center display. Tap the notification/symbol.
- > An information card will open.
- 2 Select how you would like to use the destination.

Using a saved destination

Received destinations are saved in the navigation system's library for later use.

* Option/accessory.

15.1.7. Selecting a detour in the navigation system *

Select a detour to avoid the next section of the route, e.g. if the road is closed.

1 Expand the left-side toolbar using the down arrow and then the three dots.

Tap the **Detour** symbol to display an alternate route with information on the new distance and estimated travel time. Normally, only short detours are suggested to take you quickly back to your original itinerary.

3 To **accept** the suggested detour: Tap the sign with the detour information. The route is also accepted if you begin driving the suggested route. Once the suggestion has been accepted, guidance will resume using the detour as the new route. If you **do not accept** the suggestion, continue driving the original route.

Instead of choosing **Detour**, you can instead select another route and leave your itinerary's current route. The system will update the route automatically and continue guidance to your destination along the most suitable route.

It is also possible to display an alternative route while driving.

* Option/accessory.

15.1.8. Energy distribution using map data*

In **Hybrid** drive mode, the vehicle is powered by both the electric motor and the gasoline engine. If a destination has been selected in the navigation system^{*}, the Predictive Efficiency^[1] function can use map data to distribute electric power consumption throughout the trip.

This can lower fuel consumption in comparison with normal hybrid mode, in which the vehicle first runs on electricity and then switches to the gasoline engine when the hybrid battery is discharged.

Function

If the distance to the selected destination is greater than the calculated range on the electric motor, the function will distribute the electric power to make consumption as energy-efficient as possible throughout the trip. This makes it possible to avoid situations in which normal hybrid mode would otherwise use a large portion of the electric power to e.g. use the electric motor at high speeds on a highway and then use the combustion engine at lower speeds during city driving.

The greatest fuel savings are achieved when

- the trip begins on a highway
- the trip is between 50 and 100 km (30 and 60 miles) long
- the hybrid battery is fully charged at the start of the trip.

Requirements for the function

Certain conditions must be met for the function to be possible:

- A destination must be set in the navigation system and the distance to the destination must be longer than the possible range using only the electric motor.
- Hybrid drive mode must be selected.
- The Hold and Charge functions must be disabled.
- The hybrid battery must be charged.

Usage tips

If you commute and it is not possible to charge the vehicle at work, enter your workplace as a waypoint and your home as the destination. Discharging of the hybrid battery will then be distributed over the entire commute to and from work.

Add similar commutes, i.e. the route between two charges, as Favorites in the navigation system to facilitate access.

* Option/accessory.

^[1] Only certain markets.

15.2. Itinerary and route

15.2.1. Information cards in the navigation system*

All icons on the map, such as destinations, waypoints and stored favorites, have an information card that can be opened by tapping the icon.

Press the information card once to display a small card, and press twice to display a larger card with more information. The information and possible options vary depending on the type of icon.

For example, when a $POI(^{[1]})$ is highlighted, the driver can select e.g.:

- Start navigation save the location as a destination
- Add as waypoint the position is saved as an intermediate destination (only displayed at the specified destination)
- Save the position is saved in the library
- Remove from itinerary the position is removed if it is included in the itinerary
- Nearby POI points of interest close to the car's position are shown
- * Option/accessory.
- ^[1] Point of Interest

15.2.2. Viewing points of interest along the route

A list of points of interest (POI^[1]) along your route can be displayed in the navigation system*.

Tap Ahead.

- 2 Tap POI.
- > POIs along the route are displayed according to their distance from the vehicle.
- 3 If there are multiple POIs in the same location, they will be displayed as a group. Tap the group for a list of the POIs.
- 4 Select a POI.
- 5 Select one of the information card's options and follow the instructions.

^[1] Point of Interest

* Option/accessory.

15.2.3. Itinerary

The itinerary is the route that the navigation system* suggests when the user enters a destination.

The first location set will be the itinerary's destination (final destination).

The next locations set will be the itinerary's **waypoints** (intermediate stops along the route).

An itinerary and its destination and waypoints can be easily edited at any time.

* Option/accessory.

15.2.4. Viewing alternative routes

It is possible to search for alternate routes in the navigation system* while guidance is being provided.

1 Expand the toolbar using the down arrow first and then the three dots.

Tap the Itinerary symbol to open the itinerary.

- 3 Tap Alternative routes.
- **4** Select an alternative route:
 - Eco
 - Fast
 - Scenic
- **5** Tap the map.
- > The updated route will be displayed on the map and guidance will resume.
- * Option/accessory.

15.2.5. Editing or clearing an itinerary

It is possible to remove waypoints or the entire itinerary in the navigation system* while guidance is being provided.

1 Expand the toolbar using the down arrow first and then the three dots.

Tap the Itinerary symbol to open the itinerary.

- 3 Tap the recycling bin to delete a waypoint from the itinerary or tap Clear itinerary to delete the entire itinerary.
- * Option/accessory.

15.2.6. Viewing an itinerary

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note.

It is possible to show the itinerary in the navigation system* during road navigation.

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note. 812 / 1010 1 During guidance, expand the toolbar using the down arrow and then the three dots.

Tap the Itinerary symbol to open the itinerary.

* Option/accessory.

15.2.7. Show guidance in the itinerary

A list of coming guidance points helps the driver prepare in advance for upcoming maneuvers, e.g. moving into the correct lane before making a turn.

To display a list of upcoming turns in the itinerary in the navigation system *:

- 1 Expand the toolbar using the down arrow on the left-hand side.
- **2** Expand the toolbar further using the three dots.
- 3 Tap the Turn-by-Turn symbol (see image).

A list of guidance points on the itinerary will be displayed instead of the toolbar (you can scroll through the list). Tap the arrow pointing to the left to minimize the list.

The next guidance point is always shown at the top of the list.

Tap one of the guidance points in the list to show the location on the map. Tap the map's crosshairs (see image) to return to the map guidance view, where the map shows the vehicle's current location.

* Option/accessory.

15.2.8. Selecting a detour in the navigation system*

Select a detour to avoid the next section of the route, e.g. if the road is closed.

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note. 813 / 1010 1 Expand the left-side toolbar using the down arrow and then the three dots.

Tap the **Detour** symbol to display an alternate route with information on the new distance and estimated travel time. Normally, only short detours are suggested to take you quickly back to your original itinerary.

3 To **accept** the suggested detour: Tap the sign with the detour information. The route is also accepted if you begin driving the suggested route. Once the suggestion has been accepted, guidance will resume using the detour as the new route. If you **do not accept** the suggestion, continue driving the original route.

Instead of choosing **Detour**, you can instead select another route and leave your itinerary's current route. The system will update the route automatically and continue guidance to your destination along the most suitable route.

It is also possible to display an alternative route while driving.

* Option/accessory.

15.3. Traffic information

15.3.1. Information cards in the navigation system *

All icons on the map, such as destinations, waypoints and stored favorites, have an information card that can be opened by tapping the icon.

Press the information card once to display a small card, and press twice to display a larger card with more information. The information and possible options vary depending on the type of icon.

For example, when a $POI(^{[1]})$ is highlighted, the driver can select e.g.:

- Start navigation save the location as a destination
- Add as waypoint the position is saved as an intermediate destination (only displayed at the specified destination)
- Save the position is saved in the library
- Remove from itinerary the position is removed if it is included in the itinerary
- Nearby POI points of interest close to the car's position are shown

* Option/accessory.

15.3.2. Selecting a detour in the navigation system *

Select a detour to avoid the next section of the route, e.g. if the road is closed.

1 Expand the left-side toolbar using the down arrow and then the three dots.

Tap the **Detour** symbol to display an alternate route with information on the new distance and estimated travel time. Normally, only short detours are suggested to take you quickly back to your original itinerary.

3 To **accept** the suggested detour: Tap the sign with the detour information. The route is also accepted if you begin driving the suggested route. Once the suggestion has been accepted, guidance will resume using the detour as the new route. If you **do not accept** the suggestion, continue driving the original route.

Instead of choosing **Detour**, you can instead select another route and leave your itinerary's current route. The system will update the route automatically and continue guidance to your destination along the most suitable route.

It is also possible to display an alternative route while driving.

* Option/accessory.

15.3.3. Traffic disruptions on map

The navigation system^{*} receives information on traffic events and traffic disruptions and displays these on the map^[1].

(i) Note

Traffic information is not available in all areas/countries.

Coverage areas for traffic information is continuously extended.

It is possible to make settings to determine which traffic-related information is shown on the map.

Traffic disruptions, such as congested and slow-moving traffic, road work and accidents, are shown with different symbols when the map is zoomed in.

Road construction, for example, is indicated by this symbol. Sections of road with major traffic disruptions are also shown with a red line on the side of the road affected. The line also indicates which direction of traffic is affected. If the disruption affects both directions of traffic, the section of road is marked with red lines on both sides of the road.

Information on traffic disruptions

- **1** Tap the traffic disruption symbol.
- > An information card will be displayed. Information may include e.g. the location of the traffic disruption with the street name/road number and its type/extent/duration.

Avoiding traffic disruptions

If there are traffic disruptions along the route, the **Avoid** option can be selected. The system will then calculate an alternate route.

Real Time Traffic Information (RTTI)^[1]

If the vehicle is connected to the Internet, enhanced traffic information can be retrieved using RTTI^[2].

- * Option/accessory.
- ^[1] Only available in certain markets.
- ^[2] Real Time Traffic Information

15.3.4. Show traffic disruptions along the route

A list of traffic disruptions along the route can be shown when a destination has been entered in the navigation system*.

1 When the map appears, expand the left-side toolbar using the down arrow and then the three dots.

Tap Ahead.

- 3 Tap Traffic. If there are no traffic problems along your route, the traffic button will be grayed out.
- > Any traffic problems along the route will be displayed according to their distance from the vehicle.

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note. 816 / 1010

- For additional information about a traffic disruption, tap the row to open an information card. Select one of the Δ information card's options and follow the instructions.
- Tap **Avoid** to avoid the traffic disruption. 5
- > The route will be recalculated and guidance will begin for the new route.

* Option/accessory.

15.3.5. Real Time Traffic Information (RTTI)

When the vehicle is connected to the Internet, the driver can access enhanced traffic information^[1] (RTTI^[2]) about traffic congestion, closed roads and other circumstances that could affect travel time.

If the RTTI service is activated, information about traffic events and flow is continuously retrieved from an online service. When a vehicle requests traffic flow information, anonymous data about traffic flow in the vehicle's location is also provided, which helps enable the service to function. Anonymous data is only sent when RTTI is activated. If the service is not activated, no data will be provided.

The service may need to be reactivated e.g. following certain software updates, after a workshop visit or when creating a new driver profile.

Current traffic information is shown in the navigation system * for highways/freeways, major roads, secondary roads and in some cases urban routes.

The amount of traffic information shown on the map depends on the distance to the vehicle and is only shown within approximately 120 km (75 miles) from the vehicle's location.

Text and symbols on the map are displayed in the usual way and the traffic flow shows how fast the traffic is moving on a road in comparison with the road's speed limit. The traffic flow is shown on the map on each side of the road with a colored line in each direction.

- Green no disturbances.
- Orange slow-moving traffic.
- Red congestion/traffic jam/accident.
- Black road closed.

(i) Note

Traffic information is not available in all areas/countries.

Coverage areas for traffic information is continuously extended.

^[1] Certain markets only.

* Option/accessory.

15.3.6. Activating and deactivating enhanced traffic information

When the vehicle is connected to the Internet, the driver can access enhanced traffic information^[1] (RTTI^[2]) in the navigation system^{*}.

To activate or deactivate RTTI:

- 1 Tap Settings in the center display's Top view.
- 2 Tap Navigation → Traffic.
- 3 Select Real Time Traffic Information to activate (replace regular traffic information with RTTI) or deactivate RTTI.
- **4** One pop-up window with the heading **Terms and conditions** and one with the heading **Data sharing** will appear if RTTI is being used for the first time.

If the vehicle's Internet connection is lost when RTTI is activated, regular traffic information will be automatically activated. RTTI will be reactivated when the vehicle is once again connected to the Internet.

Deactivating green lines

To stop display of the green lines indicating that there are no traffic disturbances:

- 1 Tap Settings in the Top view.
- 2 Tap Navigation → Traffic and uncheck Show Free Flowing Traffic.

^[1] Certain markets only.

- ^[2] Real Time Traffic Information
- * Option/accessory.

15.4. Navigation settings

15.4.1. Map settings

The following settings determine how the map is displayed in the navigation system*.

Settings \rightarrow Navigation \rightarrow Map

Settings can be personalized in the following areas:

- Position Format
- Map Display Format
- Show Speed Cameras
- Show Favorites
- Point of Interest (POI)

Position Format

Select **Position Format** to designate/display the current location on the map using its address or its coordinates:

- Address
- Coordinates and Altitude

Map Display Format

Select Map Display Format to choose background lighting for the map:

- Day bright colors.
- Night dark colors for better night vision.
- Auto the system will switch between Day and Night depending on the ambient light in the passenger compartment.

Speed cameras^[1]

Select Show Speed Cameras to display speed cameras on the map.

Favorites

To display Favorites on the map, select.

Point of Interest (POI^[2])

Select POIs to be displayed on the map under **Point of Interest (POI)**. Tap on the desired category, e.g. "Transportation", and then select show all or specific sub categories. Tap **Back** or **Close** to exit the menu.

- * Option/accessory.
- ^[1] This function is not available on all markets.
- ^[2] Point of Interest

15.4.2. Navigation system* settings

Select settings for how the route and other information should be presented in the navigation system.

Settings -> Navigation

Settings can be personalized in the following areas:

- Map manages the content and appearance of the map.
- Route and Guidance handles guidance and how routes are calculated and displayed.
- Traffic manages traffic information.
- * Option/accessory.

15.4.3. Route settings and guidance

Settings for how the route is calculated and how guidance is presented in the navigation system^{*} are selected here.

Adjust the volume by turning the volume knob while the voice is speaking.

Settings \rightarrow Navigation \rightarrow Route and Guidance

Settings can be personalized in the following areas:

- Arrival Time Format
- Voice Guidance Level
- Choose Default Route Type
- Route Learning
- Avoidance Settings
- Propose Gas Station

Arrival Time Format

Choose how arrival time will be displayed:

- **ETA**^[1] (estimated time of arrival at the destination)
- RTA^[2] (remaining time to arrival at destination)

Times are displayed according to the time zone of the destination.

Voice Guidance Level

- 1 Tap Voice Guidance Level.
- **2** Tap desired voice guidance:
 - None (no automatic voice guidance, but guidance can be manually requested once)
 - Low (only one message per guidance point)
 - Medium (up to 3 messages per guidance point, with limited information provided)
 - Full (up to 4 messages per guidance point and all available information provided)

Choose Default Route Type

Select the default type of route to be used:

- Fast
- Eco
- Scenic (highways/freeways are avoided whenever possible; note that this could lead to longer travel times)

It is also possible to display an alternative route while driving.

Route Learning

Select Route Learning to allow data to be collected to optimize route calculations.

Avoid

Tap **Avoidance Settings** to open a menu of options to automatically avoid (if possible) when calculating a route. Possible selections include tunnels, ferries, congestion charge zones, etc.

Suggest service station

Tap **Propose Gas Station** to activate or deactivate the display of suggestions for nearby service stations in the instrument panel when fuel level is low.

- * Option/accessory.
- ^[1] Estimated Time of Arrival
- ^[2] Remaining Time to Arrival

15.4.4. Traffic information settings

The following settings determine how traffic information^[1] is presented in the navigation system*.

Settings \rightarrow Navigation \rightarrow Traffic

Settings can be personalized in the following areas:

- Show and Handle Traffic Events
- Avoid Traffic Events
- Show Free Flowing Traffic
- Real Time Traffic Information

Show & Handle Traffic Events

Select to display traffic events on the map and use this information to calculate routes:

- None
- Major
- All types

Avoid Traffic Events

Select to avoid traffic problems when calculating routes.

- Never
- Ask (suggestions for alternate routes will be provided when available during the trip)
- Always

Show Free Flowing Traffic

Select Show Free Flowing Traffic to show this on the map.

Using RTTI^[1]

Select Real Time Traffic Information to use enhanced traffic information when the vehicle is connected to the Internet (RTTI).

^[1] Certain markets only.

* Option/accessory.

15.5. Map updates

15.5.1. Updating maps from a vehicle with Internet connection

The navigation system's * maps can be updated^[1] when the vehicle is connected to the Internet.

To help avoid unnecessarily large map data downloads, select a home region. This will also reduce the number of notifications because updates for other areas will then be sorted out. Large map updates can be done via computer and then transferred to the vehicle via a USB flash drive.

Select home region by tapping Download Center → Maps. Select your region and then tap Set as home region.

Remote update procedure.

Tap Download Center in App view.

- ➤ The app starts and a number will be shown next to Maps indicating that updates are available for the specified home region. This number will be displayed until a new search for updates has been performed or until updates have been installed.
- 2 Tap Maps.
- 3 Tap Install and then Confirm.
- > The installation/update of the selected map will begin.

For further details, search for support information on volvocars.com [https://www.volvocars.com/] or contact a Volvo retailer.

Automatic map updates

Automatic home region updates can be selected in **Download Center**.

- 1 Tap Download Center in App view.
- 2 Tap Maps.
- **3** Automatic map updates can only be selected for your home region. If the home region is not already selected, tap the down-arrow to expand the region.

Detailed map information will be displayed.

- Tap Set as home region.
- Then scroll to the top of the list of regions, where your selected home region will now be shown. 5
- Tap the down-arrow to expand the home region. 6
- Check the Auto update: box. 7
- > When the vehicle is connected to the Internet and a map update is available, it will now be automatically downloaded to the vehicle.

If a map download is interrupted

If a map download has begun but the vehicle was switched off before the download was finished, the process will be paused and then resumed automatically when the vehicle is started again and connected to the Internet.

If one or more updates were skipped or missed, the update files may be too large to be downloaded directly to the vehicle. In this case, the files can be downloaded from volvocars.com [https://www.volvocars.com] to a USB flash drive and the map can then be installed in the vehicle.

- * Option/accessory.
- ^[1] Only available in certain countries.

15.5.2. Updating maps with a computer and USB flash drive

New maps can be downloaded from the Internet to a USB flash drive and then transferred from the flash drive to the vehicle's navigation system*.

Preparations

Computer/USB flash drive update

USB flash drive

For use in updates, the USB flash drive must meet the following requirements:

Parameter	Requirement
USB standard:	At least 2.0
File system:	FAT32, exFAT or NFTS
Capacity:	Up to 128 GB This varies from market to market. Detailed information is provided in the map for each market under support information at <u>volvocars.com [https://wwwwvolvocars.com/]</u> .

Determining the current map version

Tap Download Center in App view.

- 2 Tap Maps
- > Available map regions are displayed.

Tap the arrow to expand the selected region.

- > Detailed map information will be displayed.
- **4** Make a note of the map information shown under the map image.

Downloading map data from the Internet to a USB flash drive

Make sure you have a USB flash drive and the map information you noted down.

- 1 Go to the Volvo Cars support site (volvocars.com/intl/support [https://www.volvocars.com/intl/support]) on a computer connected to the Internet and then select to download maps under **Downloads**.
- 2 Choose the type of map you want to update.
- **3** Tap the region to be updated.
- > A map containing information about the latest map data for the region will appear.
- **4** Verify that the map version is newer than the version in the vehicle.
- 5 Select the download link for either Windows or Mac, depending on which system you have.

- 6 Select "Run" to install the download program.
- 7 Click "New download" to download the map to a USB memory stick or to the computer's hard drive.
- 8 You can verify that the download/copying to the USB memory has worked correctly before you install the map in the vehicle by repeating steps 1-2 and then pressing "Check downloads" in the download program.

The time required for the download varies depending on the size of the map and the speed of the Internet connection. It is possible to verify that the data has been correctly downloaded to the USB flash drive before installing the map in the vehicle by selecting to check the download status in the downloading program.

It is not advisable to download using a mobile connection from a mobile device, or from a device using a subscription that may have a monthly limit on the amount of data that can be used.

Transferring map data from the USB flash drive to the vehicle

The time required to transfer data from the USB flash drive to the vehicle varies depending on the size of the map data file. The update can be done while driving. The navigation system can be used while updating a map region, but it cannot be used during the update of an entire map market, e.g. the EU. If the transfer has not been completed when the ignition is switched off, the update will continue the next time the vehicle is driven. It is not necessary to be driving during the update, but the ignition must be on. If the vehicle is not driven during the update, battery assistance is recommended.

Updating

- 1 Activate the navigation system.
- 2 Connect the USB flash drive to the vehicle's USB port. If there are two USB ports, the other port cannot be used at the same time.
- **3** The navigation system automatically detects that an update is available and, during the update of the whole map database, shows on the screen what percentage of the process is complete.
- When individual regions are updated, the update will start immediately.
 To start an update of the entire map database, tap Confirm. Tap Cancel to stop the installation.
- **4** Tap **Confirm**. The update of the entire map database will begin and progress information will be shown on the center display.
- 5 The center display will indicate when the update is finished. Remove the USB flash drive from the port.
- 6 Restart the infotainment system.
- 7 Verify that the correct map data has been transferred to the vehicle by repeating the steps described above under "Determining the current map version".

(i) Note

In order for the installation to start, the following criteria must be met:

- Selected region is included on the system map. For example, only the region Scandinavia can be downloaded if the system already has a Europe map. If a completely new map is downloaded, the previous map will be overwritten.
- The version for the selected region is higher than that in the vehicle.
- Selected region is compatible with the car's software. If the update is not compatible then new software will need to be downloaded.
- Selected region is compatible with existing map. If the region is not compatible, the map must be replaced.

Interruptions

If an update is interrupted, an explanatory text will always appear in the center display.

What happens if	Answer
The infotainment system is turned off while an update is in progress?	The process will pause and will continue automatically when the system is reactivated, e.g. when the engine is started.
The USB flash drive is removed from the USB port before the up- date is finished?	The process will pause and will continue automatically when the USB flash drive is reconnected to the USB port.

For further details, search for support information on volvocars.com [https://www.volvocars.com/] or contact a Volvo retailer.

* Option/accessory.

15.5.3. Map updating

MapCare is a free map update service for Volvo vehicles equipped with Sensus Navigation*.

General update information

Map updates can be done 2-12 times per year (depending on market).

There are two ways to update maps. Either via a computer and USB flash drive or directly from the vehicle^[1] (if the vehicle has an Internet connection).

The vehicle's map is divided into a number of fixed regions. When updating map data, the driver does not need to update all of these regions, but can instead choose to update only one or more specific regions.

One or more regions can be updated when the vehicle has an Internet connection. However, updating a large number of regions or the entire map requires a significant amount of data, and it may be advisable to use a computer and USB flash drive instead.

(i) Note

If an itinerary includes more than one region, all regions should have the same version number to enable the system to calculate the best route to the destination.

Updating the map structure

Changing the map structure may sometimes be necessary, e.g., if a region is added or if a large region is divided into smaller ones. If this is the case, normal updates of individual regions may not be possible and a message will be displayed explaining what has happened.

In this situation, the entire map must be reinstalled from a USB flash drive. For additional information, search for support information on <u>volvocars.com [https://www.volvocars.com/]</u> or contact a Volvo retailer.

Updating navigation system software

In addition to maps, the navigation system's own software is under constant development and needs to be updated occasionally. This could mean that a recently downloaded map is not supported by the current navigation system software. In such cases, a message will be displayed indicating that the navigation system software must be updated. Consult a Volvo retailer for assistance with the update. Your Volvo retailer can also assist with the map update itself. Please note that although the map update is free, the time required in the workshop to complete the update may incur costs.

FAQs

Ask	Answer
Can the map data platform be changed from e.g. Europe to North America?	Yes, with some exceptions. Contact a Volvo retailer for up-to-date information.
How long do map updates take?	This depends on the size of the file(s) and the speed of the Internet connection. Information about the size of the update (in MB) will be displayed on the screen.
How big is an update?	This varies from market to market. Detailed information is provided in the map for each market under support in- formation at <u>volvocars.com [https://www.volvocars.com/]</u> .
The update is not working. What should I do?	Search for more support information at volvocars.com [https://www.volvocars.com/] or contract a Volvo retailer.
Unnecessary map update notifications are displayed – what should I do?	Setting a home region reduces the number of notifications because updates for other areas will then be sorted out. Tap Download Center → Maps, select your region and then tap Set as home region.

* Option/accessory.

^[1] Only available in certain countries.

15.6. Voice control command list for the navigation system*

Several of the navigation system's functions can be activated with voice commands. Here is a list of these.

Tap ₩€ on the right-side steering wheel keypad and say one of the following commands:

• "Navigation" - Starts a navigation dialog and displays examples of commands.

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note. 828 / 1010
- "Take me home" Guidance is provided to the location set as Home.
- "Go to [city]" Inputs a city as a destination, e.g. "Go to San Francisco".
- "Go to [address]" Inputs an address as a destination. An address must contain city and street. e.g. "Go to Filbert Street 5, San Francisco".
- "Add intersection" Starts a dialog to input two streets. The destination will then be the intersection of these two streets.
- "Go to [zip code]" Input a zip code as the destination. e.g. "Go to 12345".
- "Go to [contact]" Input an address from the phone book as the destination. Example "Go to Robyn Smith"^[1].
- "Search [POI category]" Search Points of Interest (POI) in a certain category (e.g. restaurants)^[2]. To sort the list along the route, say "Along the route" when the list of results is displayed.
- "Search [POI category] i [city]" Searches for POIs in a certain category and city. The list of results is sorted based on the center point of the city. Example "Look for restaurant in San Francisco".
- "Search [POI name]". Example "Look for Zuni Café".
- "Change country/Change state^{[3],[4]}" Changes the search area for navigation.
- "Show favorites" Displays stored locations in the instrument panel.
- "Clear itinerary" Deletes all stored waypoints and destinations in an itinerary.
- "Repeat voice guidance" Repeats the most recent guidance instruction.
- "Turn off voice guidance" Guidance off.
- "Turn on voice guidance" Guidance on.

The following commands can usually be used in any situation:

- "Repeat" repeats the most recent voice command in the current dialog.
- "Help" initiates a help dialog. The system responds with commands that can be used in the current situation, an instruction or an example.
- It is possible to cancel voice control both when the system is quiet and when it is speaking.
 - "Cancel" cancels the dialog when the system is quiet.
 - Press and hold 🗤 until two beeps sound cancels the dialog even if the system is speaking.

Addresses

When an address is entered, the search area is defined as the search area that is preset in the navigation system. You can change to another search area. If the new search area has a different language than the set system language, the system will automatically switch to another recognition engine. Because of this, the address should be given in the language used in the new search area.

(i) Note

Note that addresses are searchable only for the country or state the navigation system is set to. To search for addresses in another country or state, you must first change the search area.

(i) Note

Not all system languages support voice control. If a language supports voice control, it is marked with a \mathfrak{k} symbol in the list of available system languages. Read more about where the information is found in the section on voice control settings.

* Option/accessory.

^[1] For addresses to be found in the map database, they must be entered correctly in the phone book (without spelling mistakes, abbreviations, etc.). To check spelling, go to <u>wego.here.com [https://wego.here.com]</u>

^[2] The user can choose to call the POI or enter it as a destination.

^[3] For European countries, "country" is used instead of "state".

^[4] For Brazil and India, search area is changed in the center display.

15.7. Sensus Navigation*

Sensus Navigation is a satellite-based traffic information and navigation system.

The system guides you to a destination and gives you information along the way, such as alternative routes to avoid accidents and roadwork.

You can set an itinerary, search for a POI^[1] along the route, save destinations, etc.

The system shows the exact location of the vehicle and can lead you back to the destination if you deviate from the set route.

In addition to its practical benefits, Sensus Navigation can also help contribute to a better environment by enabling you to reach your destination quickly and by the best route according to the driver's settings.

* Option/accessory.

^[1] Point of Interest

15.8. Activating and deactivating the navigation system*

The navigation system is automatically activated when the driver's door is opened and is deactivated when the driver locks and arms the vehicle.

Activating navigation

1 Navigation system tile

View the map on the center display by tapping the top tile (1) in Home view.

If the center display does not show the navigation system tile, press the Home button (2) once briefly and then tap the navigation system tile (1).

A map will appear of the surrounding area and the vehicle's current location (blue triangle).

Tap this symbol to display the map across the entire center display.

/ Warning

Observe the following:

- Direct all your attention to the road and make sure that your concentration is focused on driving.
- Follow applicable traffic laws and use good judgment while driving.
- Road conditions can be affected by weather or season, which may make certain recommendations less reliable.

Deactivating navigation

While the ignition is switched on, the navigation system is always active in the background. It switches off automatically when the ignition is switched off and the vehicle is locked.

(i) Note

The navigation system is available even when the engine is turned off. If the battery charge level becomes too low, the system will switch off.

* Option/accessory.

15.9. Voice control for navigation system*

If your vehicle is equipped with Sensus Navigation, you can use voice control to control parts of your navigation system.

Start navigation

Here is an introduction to how you can begin using voice control to control the navigation system in your vehicle.

To activate a navigation command

- Press the steering wheel keypad's voice control button (1). 1
- > You can now give commands, e.g. "Navigation", which will start a navigation dialog and show examples of commands.

(i) Note

Not all system languages support voice control. If a language supports voice control, it is marked with a 😢 symbol in the list of available system languages. Read more about where the information is found in the section on voice control settings.

Using voice control to get route guidance to an address

To get directions to a specific address, use the command Go to followed by the address. It is important that the address is given in the right order. To use voice control for route guidance to an address, the address must be said in the following order: (1) street address, (2) house number, (3) city, as shown in the following example.

- Give the command Go to. 1
- You can now say the address you would like route guidance to.

833 / 1010

- 2 Say the street, e.g. Lombard Street"
- 3 Say the house number, e.g. "five"
- 4 Say the city, e.g. "San Francisco"
- > The full command will then be: "Go to Lombard Street 5, San Francisco". Provided the address is found in the system, the navigation system will now provide route guidance to the address.

Using voice control for route guidance to an address in another country or another state

Your navigation system uploads sets of maps for the country or state it believes your vehicle is located in. This means that for accurate route guidance across country or state borders, you need to first tell the system in which country or state the address you would like route guidance to is located. You do this by using the command **Change country** or **Change state**. (Command **Change state** is primarily used in the US. In the example below, command **Change country** is used.)

- 1 Give the command Change country.
- > You can now enter the country in which the address you would like route guidance to is located, e.g. "Canada".
- 2 Now enter the address you want route guidance to by following the procedure for "Using voice control for route guidance to an address".
- > In this scenario, the full command is divided into two sub-commands:
 - 1. "Change country, Canada"
 - 2. "Go to Howe Street twenty-two, Vancouver"

If the address is found in the system, the navigation system will now provide route guidance to Howe Street twenty-two, Vancouver, Canada

(i) Note

After you have changed country, try to pronounce the address you want route guidance to in the destination country's language. This is required because the system automatically switches to the recognition language of the selected country.

Using voice control for route guidance to an address set as Home

If you have set an address as a **Home** location in your navigation system, you can use a voice command to receive route guidance to the location.

- 1 Give the command Take me home.
- > If the navigation system has a home location saved, you will now receive route guidance to the location.

Using voice control for route guidance to a place, store or other specific business without inputting an exact address

Your navigation system can provide route guidance to specific places or types of businesses, which are referred to in the system as "points of interest" (POI^[1]). Examples of points of interest are restaurants, hotels, gas stations, museums and tourist attractions.

Use the command Search to search for a point of interest. You can search for a specific point of interest or for categories of points of interest.

(i)Note

It is important to use the right command for the option you would like route guidance for. When you want route guidance to a point of interest, use the Search command. The command is different for route guidance to specific addresses. Then you should use the **Go to** command instead.

Searching for a specific place or business

Here, [POI name] refers to a specific place or business (a point of interest), e.g. a hotel, a restaurant, a city park, etc.

- Give the command Search. 1
- You can now say the specific point of interest you would like route guidance to.
- Say [POI name], e.g. "Golden Gate Bridge" 2
- > The full command will then be: "Search Golden Gate Bridge". If the point of interest is found in the system, the navigation system will now provide route guidance to the location.

Searching for a point of interest category, e.g. stores, hotels, restaurants, museums or other tourist attractions or businesses.

Here, [POI category] refers to specific types of places or businesses (points of interest), e.g. hotels, restaurants, museums, etc.

- Give the command Search. 1
- You can now say the type of point of interest you would like to find and receive route guidance to.
- Say [POI category], e.g. "restaurant" 2
- > In this case, the full command will be: "Search restaurant". The navigation system will now search for restaurants around and in the vicinity of the vehicle and display a list of these in your instrument panel. The displayed list will provide suggestions from the system based on your command. Relevant categories and nearby results will be shown at the top of the list, followed by other suggestions in order of relevance.

Since we are looking for a category in this example, it may be a good idea to select the category option that most closely matches your search.

3 Select the category from the list that best matches what you searched for, in this case "restaurant(s)", by saying the row number shown in the instrument panel for that option.

835 / 1010

> You can now see your search results and select an option.

Using voice control to cancel route guidance

You can use voice commands to cancel route guidance, including all waypoints and the final destination.

- 1 Give the command Clear itinerary.
- > The navigation system will cancel route guidance and delete the final destination and all waypoints along the route.

Inputing zip codes and house numbers

Number commands can be given in different ways depending on the function to be controlled:

- **Zip codes** should be given by stating each number individually, e.g. "zero three one two two four four three" (03122443).
- Addresses can be given by stating each number individually or in a group, e.g. two two or twenty-two (22). For some languages, it is also possible to specify hundreds, e.g. 19 hundred 22 (1922). For English and Dutch language settings, groups of numbers can also be said in sequence, e.g. twenty-two twenty-two (22 22). For English, double or triple digits can also be used, e.g. double zero (00). Numbers in the range 0-2300 can be used.

Entering a destination using the phone book's list of contacts

You can use the command "Go to [contact]" to enter an address for a contact in the phone book as a destination. However, the address must be spelled correctly and entered without abbreviations in order to be found in the map database.

To check the spelling of addresses in HERE's database, go to wego.here.com [https://wego.here.com]

* Option/accessory.

15.10. Frequently Asked Questions regarding the navigation system*

Here are answers to some frequently asked questions about the navigation system Sensus Navigation.

The system does not always calculate the fastest/shortest route

Route calculation takes into account factors such as distance, road width, type of road, traffic intensity and speed limits to find the theoretically best possible route. Familiarity with an area and experience may enable the driver to find a more efficient route.

The system uses e.g. toll roads or highways even though I have chosen to avoid them

When calculating longer routes over greater distances, the system may choose major roads for technical reasons.

If you have chosen to avoid toll roads and highways, these will be avoided whenever possible and only used when no other viable option is available.

The vehicle's location on the map is not correct

The navigation system displays the vehicle's location with an accuracy of approximately 20 meters (65 ft).

Accuracy may be reduced slightly when driving on a road that is parallel with another road, winding roads, multi-level roads and long stretches of road with no distinct curves.

High mountains, buildings, tunnels, viaducts, interchanges, multi-level roads, etc. may also affect the satellite signal reception, which may also reduce the system's ability to accurately calculate the vehicle's location.

Calibration

A calibration is performed when you lock the vehicle and let it sit for 15-30 seconds. If the inaccurate location remains after calibration, contact a workshop to have the antenna checked/calibrated.

After being transported, the vehicle's location on the map is not correct

If the vehicle is transported on e.g. a ferry or train, or if satellite signals have been blocked for some other reason, it may take up to 5 minutes before the vehicle's location can be accurately calculated.

The vehicle symbol moves erratically on the screen after changing tires

In addition to satellite signals, the vehicle's speedometer and a gyroscopic sensor are also used to calculate location, speed and direction of travel. If any of the tires are changed, e.g. a spare tire or snow tires have been installed, the system needs to "learn" the new tire dimensions.

To help ensure the system functions optimally, Volvo recommends driving for a short period on roads with good satellite reception (clear view).

The map does not represent actual road conditions

Because road changes/additions/rerouting, new traffic regulations, etc. are always being implemented, the map database may not be up to date.

The database is continuously being updated and improved. Check regularly for updates.

The vehicle symbol jumps around or spins

The system may need a few seconds to determine the vehicle's location before you start driving.

Switch off both the navigation system and the ignition. Restart but remain at a standstill for a moment before driving.

The map information is not up to date

See the next heading.

Is the most recent map version installed?

Map information is continuously being updated and improved. When updating maps via a computer and USB, the vehicle's current map version can be displayed. Check the map version in the vehicle and compare it with available map versions in the support information at <u>volvocars.com [https://www.volvocars.com/]</u>.

Current traffic information not shown

Activate enhanced traffic information (RTTI^[1]) to continuously retrieve information on traffic congestion, closed roads and other events that may affect travel time. For continuous traffic information retrieval to be possible, the vehicle must be connected to the Internet and have reception.

* Option/accessory.

^[1] Real Time Traffic Information

15.11. Navigation system* symbols and buttons

The map in the center display displays symbols and colors that inform the driver of different roads and the area around the vehicle and along the route. A tool bar with different buttons for different settings is shown on the left.

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note. 839 / 1010

Symbols and buttons on the map

0	Estimated time of arrival/remaining time to arrival
2	Distance to destination
3	Compass/switches between north and vehicle's direction of travel up
4	Start
5	Destination
6	Switch map view from 2D to 3D
0	Reset map to follow the vehicle
8	Point of Interest (POI ^[1])
9	Traffic information
0	Minimize (expanded view) or maximize the map (full screen)
0	The vehicle on the planned route
12	Minimize toolbar
13	Repeat most recent voice guidance
1	Minimize toolbar
15	Calculate a new route
10	Voice guidance temporarily On/Off
1	Display list of guidance points in the itinerary
18	Set a final destination/waypoint
19	Cancel guidance
20	Shows list of the itinerary's points of interest (POI $^{\left[1 ight]}$) and traffic information
2)	Next maneuver
22	Itinerary and alternative route
23	Destination

15.12. Navigation license agreements*

The following is information for the end-user of the Sensus Navigation system.

END USER LICENSE AGREEMENT FOR DISTRIBUTION BY HERE

FOR THE AMERICAS/ASIA PACIFIC

END-USER TERMS

The content provided ("Data") is licensed, not sold. By opening this package, or installing, copying, or otherwise using the Data, you agree to be bound by the terms of this agreement. If you do not agree to the terms of this agreement, you are not permitted to install, copy, use, resell or transfer the Data. If you wish to reject the terms of this agreement, and have not installed, copied, or used the Data, you must contact your retailer or HERE North America, LLC (as defined below) within thirty (30) days of purchase for a refund of your purchase price. To contact HERE, please visit <u>www.here.com</u>. The Data is provided for your personal, internal use only and may not be resold. It is protected by copyright, and is subject to the following terms (this "End User License Agreement") and conditions which are agreed to by you, on the one hand, and HERE and its licensors (including their licensors and suppliers) on the other hand. For purposes of these terms, "HERE" shall mean

(a) HERE North America, LLC with respect to Data for the Americas and/or the Asia Pacific region and (b) HERE Europe B.V. for Data for Europe, the Middle East and/or Africa. The Data includes certain information and related content provided under license to HERE from third parties and is subject to the applicable supplier terms and copyright notices set forth at the following URL:

here.com/supplierterms

TERMS AND CONDITIONS

License Limitations on Use: You agree that your lincense to use this Data is limited to and conditioned on use for solely personal, noncommercial purposes, and not for service bureau, timesharing or other similar purposes. Except as otherwise set forth herein, you agree not to otherwise reproduce, copy, modify, decompile, disassemble or reverse engineer any portion of this Data, and may not transfer or distribute it in any form, for any purpose, except to the extent permitted by mandatory laws.

License Limitations on Transfer: Your limited license does not allow transfer or resale of the Data, except on the condition that you may transfer the Data and all accompanying materials on a permanent basis if: (a) you retain no copies of the Data; (b) the recipient agrees to the terms of this End User License Agreement; and (c) you transfer the Data in the exact same form as you purchased it by physically transferring the original media (e.g., the CDROM or DVD you purchased), all original packaging, all Manuals and other documentation. Specifically, Multidisc sets may only be transferred or sold as a complete set as provided to you and not as a subset thereof.

Additional License Limitations: Except where you have been specifically licensed to do so by HERE in a separate written agreement, and without limiting the preceding paragraph, your license is conditioned on use of the Data as prescribed in this agreement, and you may not (a) use this Data with any products, systems, or applications installed or otherwise connected to or in communication with vehicles capable of vehicle navigation, positioning, dispatch, real time route guidance, fleet management or similar applications; or (b) with, or in communication with, including without limitation, cellular phones, palmtop and handheld computers, pagers, and personal digital assistants or PDAs.

Warning: This Data may contain inaccurate or incom¬plete information due to the passage of time, changing circumstances, sources used and the nature of collecting comprehensive geographic Data, any of which may lead to incorrect results.

No Warranty: This Data is provided to you "as is", and you agree to use it at your own risk. HERE and its licensors (and their licensors and suppliers) make no guarantees, representations or warranties of any kind, express or implied, arising by law or otherwise, including but not limited to, content, quality, accuracy, completeness, effectiveness, reliability, fitness for a particular purpose, usefulness, use or results to be obtained from this Data, or that the Data or server will be uninterrupted or error free.

Disclaimer of Warranty: HERE AND ITS LICENSORS (INCLUDING THEIR LICENSORS AND SUPPLIERS) DISCLAIM ANY WARRANTIES, EXPRESS OR IMPLIED, OF QUALITY, PERFORMANCE, MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE OR NONINFRINGEMENT. Some States, Territories and Countries do not allow certain warranty exclusions, so to that extent the above exclusion may not apply to you.

Disclaimer of Liability: HERE AND ITS LICENSORS (INCLUDING THEIR LICENSORS AND SUPPLIERS) SHALL NOT BE LIABLE TO YOU IN RESPECT OF ANY CLAIM, DEMAND OR ACTION, IRRESPECTIVE OF THE NATURE OF THE CAUSE OF THE CLAIM, DEMAND OR ACTION ALLEGING ANY LOSS, INJURY OR DAMAGES, DIRECT OR INDIRECT, WHICH MAY RESULT FROM THE USE OR POSSESSION OF THIS DATA; OR FOR ANY LOSS OF PROFIT, REVENUE, CONTRACTS OR SAVINGS, OR ANY OTHER DIRECT, INDIRECT, INCIDENTAL, SPECIAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF YOUR USE OF OR INABILITY TO USE THIS DATA, ANY DEFECT IN THIS DATA, OR THE BREACH OF THESE TERMS OR CON¬DITIONS, WHETHER IN AN ACTION IN CONTRACT OR TORT OR BASED ON A WARRANTY, EVEN IF HERE OR ITS LICENSORS HAVE BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES. Some States, Territories and Countries do not allow certain liability exclusions or damages limitations, so to that extent the above may not apply to you.

Export Control: You agree not to export from any¬where any part of the Data or any direct product thereof except in compliance with, and with all licenses and ap¬provals required under, applicable export laws, rules and regulations, including but not limited to the laws, rules and regulations administered by the Office of Foreign Assets Control of the U.S. Department of Commerce and the Bureau of Industry and Security of the U.S. De¬partment of Commerce. To the extent that any such export laws, rules or regulations prohibit HERE from complying with any of its obligations hereunder to deliver or distribute Data, such failure shall be excused and shall not constitute a breach of this Agreement.

Entire Agreement: These terms and conditions constitute the entire agreement between HERE (and its licensors, including their licensors and suppliers) and you pertaining to the subject matter hereof, and supersedes in their entirety any and all written or oral agreements previously existing between us with respect to such subject matter.

Severability: You and HERE agree that if any portion of this agreement is found illegal or unenforceable, that portion shall be severed and the remainder of the Agreement shall be given full force and effect.

Governing Law: The above terms and conditions shall be governed by the laws of the State of Illinois (for Data for the Americas and/or the Asia Pacific region) or The Netherlands (for Data for Europe, the Middle East and Africa), without giving effect to (i) its conflict of laws provisions, or (ii) the United Nations Convention for Contracts for the International Sale of Goods, which is explicitly excluded. For any and all disputes, claims and actions arising from or in connection with the Data ("Claims"), you agree to submit to the personal juris¬diction of (a) the State of Illinois for Claims related to Data for the Americas and/or the Asia Pacific region pro¬vided to you hereunder, and (b) The Netherlands for Data for Europe, the Middle East and/or Africa provided to you hereunder.

Government End Users: If the Data is being acquired by or on behalf of the United States government or any other entity seeking or applying rights similar to those customarily claimed by the United States government, this Data is a "commercial item" as that term is defined at 48 C.F.R. ("FAR") 2.101, is licensed in accordance with this End User License Agreement, and each copy of Data delivered or otherwise furnished shall be marked and embedded as appropriate with the following "Notice of Use", and be treated in accordance with such Notice:

NOTICE OF USE

CONTRACTOR (MANUFACTURER/ SUPPLIER) NAME:

(Canadian models) ACCORD DE LICENCE D'UTILISATEUR FINAL DESTINÉ À LA DISTRIBUTION

PAR HERE EN LES AMÉRIQUES / ASIE PACIFIQUE

MODALITÉS D'UTILISATION FINALE

Le contenu (« Données ») est livré en mode licence et non de vente. L'ouverture, l'installation, la copie du produit ou autre emploi des Données impliquent le consentement aux modalités de licence. En cas de désaccord avec les modalités de la licence, il est interdit d'installer, copier, utiliser ou transférer les Données. S'il n'y a pas consentement à certaines des modalités de la licence et que les Données ne sont pas déjà installées, copiées ou utilisées le titulaire peut obtenir le rem-boursement du prix

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note. 842 / 1010 d'achat, en en faisant part dans les trente (30) jours au détaillant HERE North America, LLC (« HERE ») où l'achat a été fait. Pour les coorDonnées de HERE, consulter <u>www.here.com</u> Le disque de Données cartographiques (« Données »), est prévu pour une utilisation personnelle, un usage uniquement interne et ne peut en aucun cas être revendu. Il est protégé par les droits d'auteurs et assujetti aux modalités suivantes du présent « Accord de licence d'utilisateur final », ainsi qu'aux conditions convenues entre l'acquéreur du produit et HERE North America, LLC (« HERE ») ou ses concédants (comprenant concédants et fournisseurs). Aux fins des présentes, "Here" signifie

(a) Here North America, LLC pour ce qui concerne des Données pour les régions Amériques et/ou Asie Pacifique et (b) Here Europe B.V. pour ce qui concerne des Données pour l'Europe, le Moyen¬Orient et/ou l'Afrique. Les Données incluent certaines informations et contenus concédés sous licence à HERE par des tiers. Les Données font l'objet des conditions de fourniture applicables ainsi que des mentions de copyright indiquées sous l'URL suivant:

here.com/supplierterms

MODALITÉS

Restrictions de la licence d'utilisation : Le titulaire de la licence consent à utiliser les Données en question à des fins exclusivement personnelles, non commer¬ciales pour lesquelles la licence a été accordée et non à des fins d'offre de services informatiques, d'exploitation partagée ou autres fins du même type. Le titulaire de la licence consent également à ne reproduire, ne copier, ne modifier, ne décompiler, ne désassembler ou ne concevoir à rebours aucune partie de ces Données et à ne les transférer ni les distribuer sous quelque forme ni à aucune autre fin, sauf dans la mesure permise par les lois prescrites en cette matière.

Restrictions du transfert de la licence : Cette licence restreinte ne permet pas de transférer ou de revendre les Données, sauf à la condition où le transfert des Données et de tous les outils associés est permis sur une base définitive lorsque : (a) aucune copie des Données n'est conservée par le titulaire de la licence; (b) le bénéficiaire accepte les modalités de l'accord de licence de l'utilisateur final; (c) les Données sont transférées sous strictement la même forme qu'à l'achat par cession physique du média original (par ex. le CD-ROM ou DVD d'origine), de l'emballage d'origine, de tous les manuels et autres documents. Les séries multidisques ne peu¬vent être transférées ou vendues que sous leur forme intégrale d'origine et non comme une partie de celle-ci.

Restrictions additionnelles de la licence : Sous réserve des consignes particulières d'utilisation transmises par HERE dans la licence et sans limiter la portée du paragraphe précédent, l'utilisation des Données de la licence est sujette aux conditions du présent accord qui prévoit que l'utilisateur ne peut en aucun cas (a) utiliser les Données avec les produits, les systèmes ou les applications faisant l'objet d'une installation sur des véhicules dotés d'un système de navigation, de positionnement, de répartition, de radioguidage routier en temps réel, de gestion de parcs automobiles et d'applications semblables ou (b) les utiliser avec des dispositifs de positionnement et des appareils électroniques ou informatiques mobiles ou sans fil, y compris les téléphones cellulaires, les ordinateurs de poche ou portables, les téléavertisseurs et les assistants numériques personnels ou PDA.

MISE EN GARDE : Ces Données peuvent comporter des informations inexactes ou incomplètes en raison du passage du temps, de l'évolution des circonstances, des sources utilisées et des difficultés par nature de la collecte exhaustive de Données géographiques, de tout ce qui peut conduire à des résultats incorrects.

No Warranty: This Data is provided to you "as is", and you agree to use it at your own risk. HERE and its licensors (and their licensors and suppliers) make no guarantees, representations or warranties of any kind, express or implied, arising by law or otherwise, including but not limited to, content, quality, accuracy, completeness, effectiveness, reliability, fitness for a particular purpose, usefulness, use or results to be obtained from this Data, or that the Data or server will be uninterrupted or error free.

Non-garantie : Ces Données sont fournies « telles quelles», l'acquéreur de cette licence accepte de l'u¬tiliser à ses risques et périls. HERE et ses titulaires de licences (et leurs concédants et fournisseurs) n'offrent aucune garantie ou déclaration de quelque nature que ce soit, expresse ou implicite, issue du droit ou autrement, quant au contenu, à la qualité, à l'utilité, à l'exactitude, à l'intégralité, à l'efficacité, à la fiabilité, à l'aptitude à l'emploi, à l'usage ou aux résultats découlant de l'emploi des

Données, et ne garantissent pas non plus que ces dernières ou le serveur en assurant la transmission fonctionneront sans interruption et sans erreur.

Exonération de garantie : HERE ET SES TITULAIRES DE LICENCES (Y COMPRIS LEURS PROPRES CONCÉDANTS ET FOURNISSEURS) DÉCLINENT TOUTE GARANTIE, EXPRESSE OU IMPLICITE, DE QUALITÉ, DE PERFORMANCE, DE VALEUR MARCHANDE, D'ADÉQUATION À UN USAGE PARTICULIER OU DE NON-CONTREFAÇON. Certains États, territoires et pays n'autorisent pas certaines exclusions de garantie, et, dans cette mesure, les exclusions ci-dessus pourraient ne pas s'appliquer.

Exonération de responsabilité : HERE ET SES CONCÉDANTS (Y COMPRIS LEURS PROPRES CONCÉDANTS ET FOURNISSEURS) NE PEUVENT ÊTRE TENUS RESPONSABLES PAR LE TITULAIRE DE LA LICENCE À L'ÉGARD DE TOUTE RÉCLAMATION, DEMANDE OU ACTION, QUELLE QUE SOIT LA NATURE DE LA CAUSE DE LA REVENDICATION, DEMANDE OU ACTION ALLÉGUANT TOUTE PERTE, BLESSURE OU DES DOMMAGES, DIRECTS OU INDIRECTS, QUI POURRAIENT RÉSULTER DE L'UTILISATION OU LA POSSESSION DE CES DONNÉES, OU DE TOUTE PERTE DE BÉNÉFICES, REVENUS, CONTRATS OU ÉCONOMIE ATTENDUE OU DE TOUT AUTRE DOMMAGE DIRECT, INDIRECT, ACCESSOIRE, PARTICULIER OU CONSÉCUTIF, DÉCOULANT DE L'UTILISATION DU TITULAIRE OU DE L'IMPOSSIBILITÉ D'UTILISER CES DONNÉES, DE TOUT DÉFAUT DE CES DONNÉES, OU DE LA VIOLATION DE CES MODALITÉS OU CONDITIONS, QUE CE SOIT DANS UNE ACTION EN RESPONSABILITÉ CONTRACTUELLE OU DÉLICTUELLE OU FONDÉE SUR UNE GARANTIE, MÊME SI HERE OU SES CONCÉDANTS DE LICENCE ONT ÉTÉ AVISÉS DE LA POSSIBILITÉ D'UN TEL DOMMAGE. Certains États, territoires et pays n'autorisent pas certaines exclusions de responsabilité ou limitations des dommages-in-térêts, dans cette mesure, la disposition ci-dessus pourrait ne pas s'appliquer.

Contrôle des exportations : Le titulaire de la licence accepte, où qu'il soit, de n'exporter aucune partie des Données de tout produit direct des présentes sauf en conformité, ainsi qu'à toutes les licences et autorisations requises ci-après, aux lois applicables relatives à l'exportation, aux règles et règlements, y compris, mais pas uniquement aux lois, règles et règlements administrés par le Bureau du contrôle des avoirs étrangers du département du Commerce des États-Unis et le Bureau de l'industrie et de la sécurité du département du Com¬merce des États¬Unis. HERE est dispensée de ses ob¬ligations en vertu des présentes dans la mesure ou de telles lois, règles ou règlements relatifs à l'exportation de cette nature l'empêcheraient de s'y conformer.

Intégralité de l'accord : Ces modalités constituent l'intégralité de la licence entre HERE (et ses concédants, y compris leurs concédants et fournisseurs) et le titulaire de la licence eu égard à l'objet des présentes et remplace la totalité de toutes les ententes écrites ou orales antérieures conclues entre les parties concernant l'objet des présentes.

Divisibilité : Le titulaire de la licence et HERE reconnaissent que toute partie de l'accord jugée illégale ou inexécutable devra être enlevée et que le reliquat de l'accord restera entièrement en vigueur.

Droit Applicable : les termes et conditions ci-dessus sont assujetties aux lois de l'Etat du Illinois (pour les Données pour les régions Amériques et/ou Asie Pacifique) ou au droit néerlandais (pour les Données pour l'Europe, le Moyen-Orient et/ou l'Afrique), à l'exclusion

(i) des dispositions de conflit des lois, (ii) de la Conven¬tion des Nations Unies sur les Contrats de Vente Internationale de Marchandises, qui est expressément exclue.

Tout litige, réclamation, ou action découlant ou survenant en relation avec les Données (« Réclamations ») sera soumis à la compétence exclusive (a) des tribunaux de l'Etat de l'Illinois pour toutes Réclamations concernant les Données qui vous sont fournies au titre des présentes pour les régions Amériques et/ou Asie Pacifique et, (b) des tribunaux néerlandais pour les Données qui vous sont fournies au titre des présentes pour l'Europe, le Moyen-Orient et/ou l'Afrique.

Utilisateurs finaux du gouvernement : Si les Don¬nées sont en cours d'acquisition par ou pour le compte du gouvernement des États-Unis ou toute autre personne qui cherche à obtenir ou à appliquer des droits similaires à ceux habituellement réclamés par le gouvernement des États-Unis, ces Données sont considérées comme « article commercial » tel que ce terme est défini dans la réglementation 48 CFR (« FAR ») 2,101, dont l'usage est autorisé conformément à la présente licence de l'utilisateur final. Chaque copie de Données livrée ou fournie par d'autres moyens doit être marquée et inscrite, le cas échéant, avec le texte suivant « Avis d'utilisation » et devra être traitée conformément aux Avis de ce type:

AVIS D'UTILISATION

NOM DE L'ENTREPRENEUR (FABRICANT/FOURNISSEUR) :

HERE

ADRESSE :

425 West Randolph Street, Chicago, IL 60606.

Ces Données commerciales sont des éléments tels que définis dans la FAR 2.101 qui sont soumis à la licence de l'utilisateur final en vertu de laquelle ces Données ont été fournies.

© 1987 – 2015 HERE. Tous droits réservés.

Si l'agent de négociation des contrats, un organisme du gouvernement fédéral, ou tout autre fonctionnaire fédéral refuse d'utiliser la légende fournie dans les présentes, le responsable des marchés, l'organisme du gouvernement fédéral, ou tout autre fonctionnaire fédéral doit en aviser HERE avant de rechercher des moyens supplémentaires ou autres droits dans les Données.

* Option/accessory.

15.13. Navigation system* in center display

The navigation system can be presented and controlled in several different ways, e.g. via the center display.

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note. 846 / 1010 All settings for the navigation system can be changed in the center display. The driver can select how the map should be displayed or enter a destination here.

If the map image is not shown in the center display, tap the top tile (for the navigation system).

Where am I?

What is the vehicle's current geographic location?

• Tap the vehicle symbol (blue triangle) on the map to display information directly on the map.

Find the vehicle symbol on the map

After zooming out/in or moving the map, it may be difficult to find the vehicle's location on the map again. Tap the crosshairs to reset the map to follow the vehicle symbol.

North or direction of travel facing up on the map

There are two ways to show the vehicle's movement in relation to the map. Tap the symbols to toggle between the vehicle's direction of travel or north shown facing up on the map.

When the map is shown with north facing up, the vehicle symbol moves in the actual compass direction on the map. If the vehicle is moving west, it will be shown moving left on the map (east is right, south is down, etc.).

When the vehicle symbol is pointing up, the map rotates under the vehicle symbol following the turns made by the vehicle. The compass symbol indicates which direction is north (N) on the map and the direction in which the front of the vehicle is pointing is shown in the center of the compass:

Compass symbols	Compass direction
Ν	North
NE	Northeast
E	East
SE	Southeast
S	South
SW	Southwest
w	West
NW	Northwest

2D or 3D view

Tap the symbols to toggle between 2D and 3D display.

With 3D display, the vehicle's direction of travel is always up. The map rotates under the vehicle symbols following the turns made by the vehicle. The compass indicates which direction is north (N) on the map and the direction in which the front of the vehicle is pointing is shown in the center of the compass: The map scale is not shown in 3D mode.

With 2D display, the map is shown with north facing up, and the vehicle symbols moves in the actual compass direction on the map.

Zoom in

To make the map larger, tap the center display twice in quick succession with one finger or place two fingers on the center display and move them apart ("stretch").

Zoom out

To make the map smaller, tap the center display once with two fingers or place two fingers on the center display and move them together ("pinch").

Scroll

Place one finger on the map, swipe in the desired direction and release. The scroll function is only possible with the map in maximized view, not minimized.

Change the headers displayed

Maximize the map and tap the map heading at the top of the center display. The following headers can be displayed on the map:

- 1. Destination Destination, arrival time (ETA) or remaining travel time (RTA) and distance to destination (Distance). For more information on selecting ETA or RTA, see "Route settings and guidance".
- 2. Current position as address (Address) or as coordinates (Coordinates). When coordinates are shown, altitude is also shown (Altitude). To choose between address and coordinates, see section "Map settings".
- * Option/accessory.

15.14. Navigation system* in the instrument panel

The navigation system can be presented and controlled in several different ways, e.g. via the instrument panel.

The map is only shown on the 12" instrument panel.

While driving, the driver receives voice guidance and instructions on the instrument panel. Map guidance in the instrument panel can also be activated without entering a destination.

The right-side steering wheel keypad and instrument panel

Some of the navigation system's functions, such as **Take me home** and **Cancel guidance**, can be controlled using the rightside steering wheel keypad. If a message is displayed in the instrument panel, it must be accepted or dismissed before the menu can be displayed.

- ① Open/close the menu. The menu will close automatically after a period of inactivity or after certain selections.
- **2** Scroll among the menus.
- **3** Scroll among selections in a menu.
- 4 Confirm or mark a selection.
- * Option/accessory.

15.15. Activating and deactivating the navigation system * in the instrument panel

The navigation system will be automatically displayed in the instrument panel when a destination is set. The navigation system can also be displayed without entering a destination.

- 1 Pull down the center display's Top view.
- 2 Tap Settings.
- **3** Tap My Car \rightarrow Displays \rightarrow Driver Display Information.
- 4 Tap the Show Map radio button to display the navigation system in the instrument panel without entering a destination.

* Option/accessory.

15.16. Suggest new map information with Map Creator

If your Volvo is equipped with Sensus Navigation, maps from the Here map supplier are shown. If you find that any information is missing from a map, or want to suggest changes, you can do this at Here's Map Creator service. Such information can include new addresses or rerouted roads.

On Here's <u>Map Creator [https://mapcreator.here.com/?site=volvo-com-consumers]</u> service, you can create an account to log in and suggest map changes. Instructions for how to do this are also found there.

The changes you suggest are sent to Here for review. Once the information has been verified and approved, the information you suggested is added to their maps. The changes will be available in your Volvo after your suggestion has been approved by Here and implemented in a map update that you then install in your navigation system.

Suggestions for changes that are reported are reviewed and checked thoroughly before Here approves them and adds them to their maps. It can take up to twelve months before the changes reach the maps in your vehicle.

(i) Note

Volvo does not have the opportunity to verify, approve or implement the requests for map changes you send to Here.

15.17. Traffic information providers

Information on which companies deliver traffic information to your vehicle and its systems in different countries is found below.

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note. 850 / 1010

16.1. Changing a wheel

16.1.1. Changing a wheel

Wheel changes must always be carried out correctly. The following instructions show how to remove and install a wheel and what is important to keep in mind. Make sure that the tire dimension is approved for use on the vehicle.

/ Warning

- If a tire must be changed near passing traffic, make sure all passengers move to a safe location.
- Use a jack intended for the vehicle when changing a tire. For any other job, use stands to support the vehicle.
- Never crawl under or allow any part of your body to be extended under a vehicle supported by a jack.
- Never let anyone remain in the vehicle when it is raised on a jack.

(!) Important

The jack* provided with your vehicle is intended to be used only in temporary situations such as changing wheels in the event of a flat tire. Only the jack that came with your particular model should be used to lift the vehicle. If the vehicle needs to be lifted more frequently or for a prolonged period, using a garage jack or hoist is recommended. Always follow this device's instructions for use.

When not in use, the jack should be kept in its storage compartment under the cargo compartment floor. The jack needs to be cranked together to the correct position in order to fit.

Removing a wheel

Read through all instructions before starting. Before raising the vehicle using a jack or lift, take out all the tools you will need.

- 1 Turn on the vehicle's hazard warning flashers if a wheel change must be performed in an area with traffic.
- 2 Make sure that the parking brake is engaged and put the gear selector in P position.
- **3** Place chocks in front of and behind the wheels that are still on the ground. For example, use heavy wooden blocks or large stones.

4 Using the lug wrench, screw the towing eye into place as far as possible.

- **5** Remove the plastic covers from the wheel bolts using the designated tool.
- 6 With the vehicle still on the ground, use the lug wrench/towing eye to loosen the wheel bolts ½-1 turn by pressing downward (counterclockwise). Always start with the locking wheel bolts*.
- **7** Follow the instructions for safely lifting the vehicle using a jack.
- 8 Raise the vehicle until the wheel to be changed can move freely. Unscrew the wheel bolts and lift off the wheel.

Installing a wheel

- 1 Clean the contact surfaces between the wheel and the wheel hub.
- 2 Lift the wheel into place. If the vehicle has tires or wheels of different sizes on the front and back, make sure the correct dimensions are used for each position. Tighten the wheel bolts securely.

Do **not** grease the wheel bolt threads.

- 3 Lower the vehicle so that the wheel cannot rotate.
- **4** Tighten the wheel bolts in a crisscross pattern (as shown in illustration). It is important that the wheel bolts are securely tightened. Tighten to 140 Nm (103 ft. lbs.). Use a torque wrench to check torque.

- **5** Press the plastic covers over the wheel bolts.
- 6 Check the tire inflation pressure and store the new inflation pressure in the tire pressure monitoring system*.

Warning

The wheel bolts may need to be tightened again several days after a wheel change. Temperature fluctuations and vibrations can cause them to loosen slightly.

(i) Note

- After inflating a tire, always replace the valve cap to help prevent valve damage caused by gravel, dirt, etc.
- Use plastic valve caps only. Metal caps could corrode and become difficult to remove.

* Option/accessory.

16.1.2. Jack*

The jack can be used to lift the vehicle to e.g. change a wheel.

() Important

The jack* provided with your vehicle is intended to be used only in temporary situations such as changing wheels in the event of a flat tire. Only the jack that came with your particular model should be used to lift the vehicle. If the vehicle needs to be lifted more frequently or for a prolonged period, using a garage jack or hoist is recommended. Always follow this device's instructions for use.

When not in use, the jack should be kept in its storage compartment under the cargo compartment floor. The jack needs to be cranked together to the correct position in order to fit.

* Option/accessory.

16.1.3. Wheel bolts

The wheel bolts hold the wheel in place on the wheel hub.

Only use rims that have been tested and approved by Volvo and are included in Volvo's original product range.

Use a torque wrench to check that the wheel bolts are tightened correctly.

Do not grease the wheel bolt threads.

Varning

The wheel bolts may need to be tightened again several days after a wheel change. Temperature fluctuations and vibrations can cause them to loosen slightly.

(!) Important

The wheel bolts should be tightened to 140 Nm (103 ft. lbs.). Over-tightening or under-tightening could damage the threaded joints.

Locking wheel bolt kit*

To loosen or tighten the locking wheel bolts, turn the wrench in the locking bolt until it fully engages in the code grooves. When removing a wheel, always start with the locking wheel bolts. When mounting a wheel, end with the locking bolt.

(!)Important

Make sure you have a solid connection between bolt and wheel bolt key when loosening/tightening the wheel bolts. Applying force at an angle could damage the slots in the wheel bolts and the wheel bolt key and make it impossible to install or remove the wheel.

When the wheel bolt key is not being used, stow it in its designated location in the foam block under the cargo compartment floor. This is important to remember so that the tool is available if the vehicle is taken to a workshop. If you lose the key, contact your Volvo retailer.

* Option/accessory.

16.1.4. Spare wheel

The spare wheel^[1] is a Temporary Spare and can be used to temporarily replace one of the vehicle's regular wheels with a punctured tire.

The spare wheel is only intended for temporary use. Replace it with a normal wheel as soon as possible.

The driving characteristics of the vehicle change and ground clearance reduces when the spare wheel is used. Do not wash the vehicle in an automatic car wash while using the Temporary Spare.

The recommended tire pressure must be maintained regardless of at which position the temporary spare wheel is used on the vehicle.

If the spare wheel is damaged, a replacement can be purchased from a Volvo retailer.

/! Warning

Current legislation prohibits the use of the "Temporary Spare" wheel other than as a temporary replacement for a punctured tire. It must be replaced as soon as possible by a standard tire. Roadholding and handling may be affected with the "Temporary Spare" wheel in use.

/ Warning

- Never drive faster than 80 km/h (50 mph) with a spare tire mounted on the vehicle.
- The vehicle must never be driven with more than one "Temporary Spare" wheel mounted.
- Driving with a spare wheel may alter the driving characteristics of the vehicle. Replace the spare wheel with a normal wheel as soon as possible.
- The spare wheel is smaller than the normal wheel, which affects the vehicle's ground clearance. Watch for high curbs and do not wash the vehicle in an automatic car wash when a spare wheel is mounted.
- Follow the manufacturer's recommended tire inflation pressure for the spare wheel.
- On all-wheel drive vehicles, the drive on the rear axle can be disconnected.
- If the spare wheel is mounted on the front axle, snow chains must not be used.
- The spare wheel must not be repaired.

(!) Important

The vehicle must not be driven with wheels of different dimensions or with a spare tire other than the one the vehicle is approved for. Using tires of different sizes can seriously damage the vehicle's transmission due to different rolling circumferences.

Vehicles designed for different front and rear tire or wheel dimensions must have the same type and make of tire on the front and rear axles.

^[1] Not available on all models.

16.1.5. Handling the spare wheel

Follow these instructions regarding handling the spare wheel^[1].

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note. 857 / 1010

Accessing the spare wheel

This illustration is generic and appearance may vary.

The spare tire is located under the floor of the cargo compartment and is held in place by a strap. The foam block contains all tools needed to change a wheel.

- 1 Lift the rear edge of the cargo compartment floor.
- 2 Release the straps and lift out the spare wheel.

Stowing a flat tire

- 1 Put the tools back in their correct positions in the foam block.
- 2 Then lower the trunk/cargo compartment floor and place the punctured tire in the trunk/cargo compartment.

^[1] Not available on all models.

16.1.6. Snow chains

Using snow chains and/or snow tires can help improve traction in winter driving conditions.

Volvo does not recommend use of snow chains on wheel dimensions larger than 18 inches

/ Warning

Use Volvo genuine snow chains or equivalent snow chains that are suitable for the vehicle model and the tire and wheel sizes. Only **one-sided** snow chains are permitted.

If uncertain about snow chains, Volvo recommends contacting an authorized Volvo workshop. Use of the wrong snow chains could cause serious damage to the vehicle and result in an accident.

Using snow chains could result in malfunction of the system for monitoring of tire inflation pressures * ^[1].

(Important

Snow chains can be used on the vehicle, with the following restrictions:

- Always follow the manufacturer's installation instructions carefully. Install chains as tightly as possible and retighten periodically.
- Only put snow chains on the front wheels (also applies to all-wheel drive vehicles).
- If accessory, aftermarket or "custom" tires and wheels with different dimensions than the original tires and wheels are used, snow chains in some cases may NOT be used. Sufficient distance between the chains and brakes, suspension and body components must be maintained.
- Check local regulations regarding the use of snow chains before installing.
- Never exceed the snow chain manufacturer's specified maximum speed limit. Under no circumstances should you exceed 50 km/h (30 mph).
- Avoid bumps, holes or sharp turns when driving with snow chains.
- Avoid driving on surfaces without snow as this wears out both the snow chains and the tires.
- The handling of the vehicle can be adversely affected when driving with chains. Avoid fast or sharp turns as well as locked wheel braking.
- Some types of strap-on chains affect brake components and therefore must NOT be used.

Consult a Volvo retailer for more information about snow chains.

* Option/accessory.

^[1] Tire Pressure Monitoring System (TPMS)

16.1.7. Snow tires

Snow tires are designed for winter driving conditions.

Volvo recommends winter tires especially developed for winter driving on all wheels if there is a risk of snow or ice. The tire dimensions vary depending on engine type. When driving with snow tires, the correct type of tires must be mounted on all four wheels.

Tips for changing snow tires

When switching between regular tires and snow tires, mark the tires according to which side they were mounted on, e.g. **L** for left and **R** for right.

Contact a Volvo retailer for assistance determining the most suitable rims and tires.

Studded tires

Studded tires should be broken in by driving 500–1000 km (300–600 miles) slowly and gently to help the studs settle properly in the tires. This gives the tire, and especially the studs, a longer service life.

(i) Note

Legal requirements concerning the use of studded tires may vary. Always follow local laws and regulations.

Tread depth

Road conditions with ice, slush and low temperatures place considerably higher demands on tires than summer conditions. Volvo therefore recommends not driving on snow tires that have a tread depth of less than 4 mm (0.15 inch).

16.1.8. Flat tire

Turn on the hazard warning flashers if you get a flat tire near passing traffic.

Move the vehicle out of traffic if this can be done safely. Call road assistance if necessary.

If possible, exit the vehicle on the side with the least traffic.

Handling a flat tire

The vehicle is equipped with either a tire sealing system for temporarily sealing a tire, or a spare wheel^[1]. See the relevant section for instructions on use.

^[1] Not available on all models.

16.1.9. Tool kit

Tools for e.g. towing or changing wheels are provided in the vehicle's cargo compartment.

* Option/accessory.

^[1] Not available on all models.

16.2. Tires

16.2.1. Tire sidewall designations

The following information can be found on a tire's sidewall.

Federal law mandates that tire manufacturers place standardized information on the sidewall of all tires (see the illustration).

The vehicle has been certified with certain combinations of wheels and tires.

The following information is listed on the tire sidewall:

The tire designation:

(i)Note

Please be aware that the following tire designation is an **example only** and that this particular tire may not be available on your vehicle.

- 1. 215: The width of the tire (in millimeters) from sidewall edge to sidewall edge. The larger the number, the wider the tire.
- 2. 65: The ratio of the tire's height to its width in percent.
- 3. R: Radial tire (the designation RF and the 🔍 symbol indicate that the vehicle is equipped with optional self-supporting run flat tires^[1].
- 4. 15: The diameter of the wheel rim (in inches).
- 5. 95: The tire's load index. In this example, a load index of 95 equals a maximum load of 1521 lbs (690 kg).
- 6. H: The tire's speed rating, or the maximum speed at which the tire is designed to be driven for extended periods of time, carrying a permissible load for the vehicle, and with correct inflation pressure. For example, H indicates a speed rating of 210 km/h (130 mph).

(i) Note

The tire's load index and speed rating may not appear on the sidewall because they are not required by law.

7. M+S or M/S = Mud and Snow, AT = All Terrain, AS = All Season

- 8. U.S. DOT Tire Identification Number (TIN): This begins with the letters "DOT" and indicates that the tire meets all federal standards. The next two numbers are the factory code where the tire was manufactured, the next two are the tire size code and the last four numbers represent the week and year the tire was made. For example, 0717 means that the tire was manufactured during week 7 of 2017. The numbers in between are marketing codes used at the manufacturer's discretion. This information helps a tire manufacturer identify a tire for safety recall purposes.
- 9. Tire Ply Composition and Material Used: Indicates the number of plies indicates or the number of layers of rubber-coated fabric in the tire tread and sidewall. Tire manufacturers also must indicate the ply materials in the tire and the sidewall, which include steel, nylon, polyester, and others.
- 10. Maximum Load: Indicates the maximum load in pounds and kilograms that can be carried by the tire. Refer to the vehicle's tire information placard located on the B-Pillar for the correct tire pressure for your vehicle.
- 11. Treadwear, Traction, and Temperature grades.

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note.

Speed Symbol

A tire's Speed Symbol (SS) indicates the maximum speed for which the tire has been certified and should be at least equivalent to the vehicle's top speed.

Winter tires, with or without studs, are exceptions and may use a lower SS. When winter tires are installed, the vehicle may not be driven faster than the tires' SS.

The vehicle's speed should always be determined by the posted speed limit and traffic and road conditions, not the tire's SS.

The following table indicates the maximum permissible speed for each SS.

Μ	130 km/h (81 mph)
Q	160 km/h (100 mph)
т	190 km/h (118 mph)
Н	210 km/h (130 mph)
V	240 km/h (149 mph)
w	270 km/h (168 mph)
Υ	300 km/h (186 mph)

/l Warning

- The wheel and tire sizes for your Volvo are specified to meet stringent stability and handling requirements. Unapproved wheel/tire size combinations can negatively affect your vehicle's stability and handling.
- Any damage caused by installation of unapproved wheel/tire size combinations will not be covered by your new vehicle warranty. Volvo assumes no responsibility for death, injury, or expenses that may result from such installations.

^[1] Self-supporting run flat tires may not be available on all models.

16.2.2. Uniform Tire Quality Grading

ALL PASSENGER VEHICLE TIRES MUST CONFORM TO FEDERAL SAFETY REQUIREMENTS IN ADDITION TO THESE GRADES.

Quality grades can be found, where applicable, on the tire sidewall between the tread shoulder and maximum section width. For example:

Treadwear 200 Traction AA Temperature A

TREADWEAR

The treadwear grade is a comparative rating based on the wear rate of the tire when tested under controlled conditions on a specified government test course. For example, a tire graded 150 would wear one and one half $(1 \frac{1}{2})$ times as well on the government course as a tire graded 100. The relative performance of tires depends upon the actual conditions of their use, however, and many depart significantly from the norm due to variation in driving habits, maintenance practices and differences in road characteristics and climate.

TRACTION

The traction grades, from highest to lowest, are AA, A, B, and C, as measured under controlled conditions on specified government test surfaces of asphalt and concrete. A tire marked C may have poor traction performance.

V Warning

The traction grade assigned to this tire is based on braking (straight-ahead) traction tests and is not a measure of cornering (turning) traction.

TEMPERATURE

The temperature grades are A (the highest), B, and C, representing the tire's resistance to the generation of heat and its ability to dissipate heat when tested under controlled conditions on a specified indoor laboratory test wheel. Sustained high temperature can cause the material of the tire to degenerate and reduce tire life, and excessive temperature can lead to sudden tire failure. The grade C corresponds to a minimum level of performance that all passenger vehicle tires must meet under the Federal Motor Safety Standard No. 109. Grades B and A represent higher levels of performance on the laboratory test wheel than the minimum required by law.

/ Warning

The temperature grade for this tire is established for a tire that is properly inflated and not overloaded. Excessive speed, under-inflation, or excessive loading, either separately or in combination, can cause heat buildup and tire failure.

16.2.3. Tire terminology

The following is a glossary of tire-related terms.

The tire suppliers may have additional markings, notes or warnings such as standard load, radial tubeless, etc.

- Tire information placard: A placard showing the OE (Original Equipment) tire sizes, recommended inflation pressure, and the maximum weight the vehicle can carry.
- Tire Identification Number (TIN): A number on the sidewall of each tire providing information about the tire brand and manufacturing plant, tire size and date of manufacture.
- Inflation pressure: A measure of the amount of air in a tire.
- Standard load: A class of P-metric or Metric tires designed to carry a maximum load at 35 psi [37 psi (2.5 bar) for Metric tires]. Increasing the inflation pressure beyond this pressure will not increase the tires load carrying capability.
- Extra load: A class of P-metric or Metric tires designed to carry a heavier maximum load at 41 psi [43 psi (2.9 bar) for Metric tires]. Increasing the inflation pressure beyond this pressure will not increase the tire's load carrying capability.
- kPa: Kilopascal, a metric unit of air pressure.
- PSI: Pounds per square inch, a standard unit of air pressure.
- B-pillar: The structural member at the side of the vehicle behind the front door.
- Bead area of the tire: Area of the tire next to the rim.
- Sidewall of the tire: Area between the bead area and the tread.
- Tread area of the tire: Area of the perimeter of the tire that contacts the road when mounted on the vehicle.
- Rim: The metal support (wheel) for a tire or a tire and tube assembly upon which the tire beads are seated.
- Maximum load rating: A figure indicating the maximum load in pounds and kilograms that can be carried by the tire. This rating is established by the tire manufacturer.
- Maximum permissible inflation pressure: The greatest amount of air pressure that should ever be put in the tire. This limit is set by the tire manufacturer.
- Recommended tire inflation pressure: Inflation pressure, established by Volvo, which is based on the type of tires that are
 mounted on a vehicle at the factory. This information can be found on the tire inflation placard(s) located on the driver's side
 B-pillar and in the tire inflation table.
- Cold tires: The tires are considered to be cold when they have the same temperature as the surrounding (ambient) air. This temperature is normally reached after the vehicle has been parked for at least 3 hours.

16.2.4. Approved tire pressure

The following tire pressures are recommended by Volvo for your vehicle. Refer to the tire inflation placard for information specific to the tires installed on your vehicle at the factory.

Tire dimensions	Cold tire pressure for up to five persons			
	Front psi (kPa)	Rear psi (kPa)		
235/55 R18 235/50 R19 245/45 R20 245/40 R21	35 (240)	35 (240)		
Temporary spare tire T125/70 R19	60 (420)	60 (420)		

16.2.5. Tire direction of rotation

Tires with tread designed to roll in only one direction are marked with an arrow on the sidewall.

The arrow shows the tire's direction of rotation.

- Tires should maintain the same direction of rotation throughout their service life.
- Tires should only be moved between the front and back, never from right to left or vice versa.
- Incorrectly mounted tires impair the vehicle's braking properties and ability to force aside rain, snow and slush.
- The tires with the most tread should always be mounted on the rear wheels to help reduce the risk of rear-wheel skidding.
- Never switch positions between the front and rear axles on vehicles with different front and rear tire or wheel dimensions.
- To help reduce the risk of rear-wheel skid when driving on wet roads, Volvo recommends that the rear tires do not have significantly less tread than the front tires.

(i) Note

Make sure to have tires of the same type, dimensions and make on both the front and rear axles.

Vehicles with different front and rear tire dimensions must have the same type and make of tire on the front and rear axles.

16.2.6. Tread wear indicator

The tread wear indicator shows the status of the tire's tread.

The tread wear indicator is a narrow elevated strip running across the tire's longitudinal tread grooves. The letters TWI (Tread Wear Indicator) are visible on the side of the tire. When approximately 1.6 mm (1/16 inch) is left on the tread, the tread will be at the same height as the tread wear indicator. Replace the tire as soon as possible. Tires with low tread offer very poor traction in rain or snow.

16.3. Tire inflation pressure

16.3.1. Tire inflation pressure monitoring

16.3.1.1. Tire Pressure Monitoring System*

The tire inflation pressure monitoring system^[1] provides an indicator symbol in the instrument panel if pressure is too low in one or more tires.

This symbol illuminates to indicate low inflation pressure. Check the inflation pressure in the **Car Status** app in the center display.

If there is a system malfunction, the inflation pressure warning symbol will flash for approximately one minute and then glow steadily.

System description

The tire pressure monitoring system measures differences in rotational speed between the wheels through the ABS system to determine if the tires are properly inflated. If inflation pressure in a tire is too low, its diameter (and consequently its rotational speed) changes. By comparing the tires with each other, the system can determine if the pressure in one or more tires is too low.

General information about the tire pressure monitoring system

In the following description, the tire monitoring system is generally referred to as TPMS.

Each tire, including the spare (if provided)^[2] should be checked monthly when cold and inflated to the inflation pressure recommended by the vehicle manufacturer on the vehicle placard or tire inflation pressure label. (If your vehicle has tires of a different size than the size indicated on the vehicle placard or tire inflation pressure label, you should determine the proper tire inflation pressure for those tires.)

As an added safety feature, your vehicle has been equipped with a tire pressure monitoring system (TPMS) that illuminates a low tire pressure telltale when one or more of your tires is significantly under-inflated. Accordingly, when the low tire pressure telltale illuminates, you should stop and check your tires as soon as possible, and inflate them to the proper pressure.

Driving on a significantly under-inflated tire causes the tire to overheat and can lead to tire failure. Under-inflation also reduces fuel efficiency and tire tread life, and may affect the vehicle's handling and stopping ability. Please note that the TPMS is not a substitute for proper tire maintenance, and it is the driver's responsibility to maintain correct tire pressure, even if under-inflation has not reached the level to trigger illumination of the TPMS low tire pressure telltale.

Your vehicle has also been equipped with a TPMS malfunction indicator to indicate when the system is not operating properly. The TPMS malfunction indicator is combined with the low tire pressure telltale. When the system detects a malfunction, the telltale will flash for approximately one minute and then remain continuously illuminated. This sequence will continue upon subsequent vehicle start-ups as long as the malfunction exists. When the malfunction indicator is illuminated, the system may not be able to detect or signal low tire pressure as intended.

TPMS malfunctions may occur for a variety of reasons, including the installation of replacement or alternate tires or wheels on the vehicle that prevent the TPMS from functioning properly.

Always check the TPMS malfunction telltale after replacing one or more tires or wheels on your vehicle to ensure that the replacement or alternate tires and wheels allow the TPMS to continue to function properly.

To keep in mind

- Always save the new inflation pressure in the system after changing a tire or adjusting the inflation pressure.
- Using snow chains can affect tire inflation pressure monitoring. This is indicated by a symbol and message in the instrument panel. When the snow chains are removed, all tires should be checked and adjusted to the recommended inflation pressure. The new inflation pressure should then be saved in the tire pressure monitoring system.
- If a spare wheel^[2] is used, it is possible that the tire pressure monitoring system will not work correctly due to the differences between the wheels.
- The system does not replace the need for regular tire inspection and maintenance.
- It is not possible to deactivate the tire pressure monitoring system.

/ Warning

- Incorrect inflation pressure could lead to tire failure, which could cause the driver to lose control of the vehicle.
- The system cannot predict sudden tire damage.

* Option/accessory.

^[1] Tire Pressure Monitoring System (TPMS)

^[2] Not available on all models.

16.3.1.2. Viewing tire pressure status in the center display*

With the system for tire inflation pressure monitoring^[1], inflation pressure status can be viewed in the center display.

Checking status

The vehicle may need to be driven for a few minutes at a speed above 35 km/h (22 mph) to activate the system.

- 1 Open the Car Status app in App view.
- **2** Tap **TPMS** to display the status of the tires.

The illustration is generic. Layout may vary depending on vehicle model or software version.

- * Option/accessory.
- ^[1] Tire Pressure Monitoring System (TPMS)

16.3.1.3. Action when warned of low tire pressure

When the tire inflation pressure monitoring system^[1] detects low inflation pressure in a tire, immediate action is required.

If the system's indicator symbol illuminates and the message about low inflation pressure is displayed, check the tire pressure and inflate if necessary.

- **1** Switch off the ignition.
- 2 Check the inflation pressure on all four tires using a tire pressure gauge.
- **3** Inflate the tire to the correct inflation pressure; see the tire pressure placard on the driver's side B pillar for recommended pressures for factory-mounted tires.
- 4 After the inflation pressure has been adjusted, always save the new inflation pressure in the system via the center display.

Please be aware that the indicator symbol will not go out until the low tire pressure has been corrected and a storing procedure has been started for the new inflation pressure.

The vehicle may need to be driven for a few minutes at a speed above 35 km/h (22 mph) for the system to be able to store the new reference value.

(i) Note

To help prevent incorrect inflation pressure, pressure should be checked when the tires are cold. The tires are considered to be cold when they have reached the same temperature as the ambient temperature (about 3 hours after the vehicle was last driven). After driving for a few kilometers, the tires will warm up and the pressure will increase.

(i) Note

- After inflating a tire, always replace the valve cap to help prevent valve damage caused by gravel, dirt, etc.
- Use plastic valve caps only. Metal caps could corrode and become difficult to remove.

/ Warning

- Incorrect inflation pressure could lead to tire failure, which could cause the driver to lose control of the vehicle.
- The system cannot predict sudden tire damage.

^[1] Tire Pressure Monitoring System (TPMS)

16.3.1.4. Saving new reference values for tire inflation pressure monitoring*

In order for the tire inflation pressure monitoring system^[1] to function correctly, inflation pressure reference values must be saved correctly. To help ensure that the system can correctly alert the driver of low inflation pressure, this must be done each time the tires are changed or the inflation pressure is adjusted.

To store the new inflation pressure as a reference value in the system:

- 1 Switch off the ignition.
- 2 Inflate the tire to the correct inflation pressure; see the tire pressure placard on the driver's side B pillar for recommended pressures for factory-mounted tires.
- 3 Start the vehicle.
- 4 Open the Car Status app in App view.
- 5 Tap TPMS.

6

(i) Note

The vehicle must be stationary for the **Store Pressure** button to be selectable.

Tap Store Pressure.

- 7 Tap OK to confirm that the tire pressure in all four tires has been checked and adjusted.
- 8 Drive the vehicle until the new inflation pressure has been saved. The new inflation pressure is stored when the vehicle is driven at speeds over 35 km/h (22 mph).
- > When enough data has been collected for the system to detect low inflation pressure, the animation showing the progress of the procedure for storing a new reference value will disappear from the center display. The system will not provide any further confirmation that the new inflation pressure has been stored.

If storing cannot be performed, a message will be displayed.

/!\ Warning

The exhaust gases contain carbon monoxide, which is invisible and odorless but very poisonous. The procedure for saving a new inflation pressure must therefore always be performed outdoors or in a workshop with exhaust gas extraction.

* Option/accessory.

^[1] Tire Pressure Monitoring System (TPMS)

16.3.1.5. Tire inflation pressure monitoring system* messages

A number of messages related to the tire inflation pressure monitoring system^[1] may be displayed. Several examples are provided below.

871 / 1010

Instrument panel: Tire pressure low Check Car Status app in center display	The indicator symbol will illuminate to indicate that inflation pressure is low in one or more tires. See the Car Status app in the center display for more information.
Instrument panel: Tire pressure system Temporarily unavailable	The indicator symbol will flash for about 1 minute and then glow steadily. The system is temporarily unavailable and will be activated momentarily.
Instrument panel: Tire pressure system Service required	The indicator symbol will flash for about 1 minute and then glow steadily. If the system is not working properly, contact a workshop $^{[2]}$.

* Option/accessory.

- ^[1] Tire Pressure Monitoring System (TPMS)
- ^[2] An authorized Volvo workshop is recommended.

16.3.2. Checking tire pressure

Correct inflation pressure helps improve driving stability, save fuel and increase the service life of the tires.

Tire pressure decreases over time, which is normal. Tire pressure also varies depending on the ambient temperature. Driving on under-inflated tires could cause the vehicle to overheat and lead to damage. Tire pressure affects traveling comfort, road noise and driving characteristics.

Check the pressure in the tires every month. Use the recommended inflation pressure for cold tires to help maintain good tire performance. Under-inflated or over-inflated tires could cause uneven tread wear.

Use an air pressure gauge and check the inflation pressure on all the tires, including the spare tire^[1], at least once a month and before long trips. Volvo recommends buying a reliable air pressure gauge, as the automatic gauges provided at service stations may be inaccurate.

/ Warning

- Under-inflation is the most common cause of tire failure. This can result in severe tire cracking, tread separation, tire blow out or reduced control of the vehicle, which can lead to an increased risk of injury.
- Under-inflated tires reduce the load carrying capacity of your vehicle.

Cold tires

Inflation pressure should be checked when the tires are cold. The tires are considered to be cold when they have the same temperature as the surrounding (ambient) air. This temperature is normally reached after the vehicle has been parked for at least 3 hours.

After driving for approximately 1.6 km (1 mile), the tires are considered to be warm. If you have to drive farther than that to inflate the tire, check and record your inflation pressure first. Then fill to an appropriate inflation pressure when you arrive at the pump.

When the ambient temperature changes, so does the inflation pressure. A 10-degree temperature drop causes a corresponding drop in inflation pressure of 7 kPa (1 psi). Check the inflation pressure of the tires regularly and adjust to the correct pressure,

which can be found on the vehicle's tire information decal or certification label.

If you check inflation pressure when the tires are warm, you should never release air. The tires become warm after driving and it is normal for warm tires to have an inflation pressure above the recommended pressure for cold tires. A warm tire with an inflation pressure equal to or under the recommended pressure for cold tires could be significantly under-inflated.

^[1] Not available in all models.

16.3.3. Adjusting tire pressure

Tire pressure decreases over time, which is normal. The tire pressure must therefore be adjusted to maintain the recommended tire pressure.

Use the recommended inflation pressure for cold tires to help maintain good tire performance and even wear.

(i) Note

To help prevent incorrect inflation pressure, pressure should be checked when the tires are cold. The tires are considered to be cold when they have reached the same temperature as the ambient temperature (about 3 hours after the vehicle was last driven). After driving for a few kilometers, the tires will warm up and the pressure will increase.

- 1 Remove the valve cap from the tire and press the air pressure gauge firmly onto the valve.
- 2 Inflate the tire to the correct inflation pressure; see the tire pressure placard on the driver's side B pillar for recommended pressures for factory-mounted tires.
- 3 Screw the valve cap back on.

(i) Note

- After inflating a tire, always replace the valve cap to help prevent valve damage caused by gravel, dirt, etc.
- Use plastic valve caps only. Metal caps could corrode and become difficult to remove.
- **4** Visually inspect the tire to make sure there are no nails or other embedded objects that could puncture the tire and cause air leakage.
- 5 Check the sidewalls to make sure there are no gouges, cuts, bulges or other irregularities.
- 6 Repeat this procedure for each tire, including the spare tire^[1].

(i) Note	
If you have overfilled the tire, release air by pushing on the metal stem in the center of the valve. Then recheck the pres- sure with your tire gauge.	
Some spare tires require higher inflation pressure than the other tires. Consult the tire inflation pressure table or the infla- tion pressure decal.	
^[1] Not available on all models.	

16.3.4. Location of tire pressure decal

The tire pressure placard on the driver's side B pillar (between the front and the rear door) indicates tire pressure for different loads and speed conditions.

<u></u>	(o) km/h	ဂို (ဂိို) ။ (၂၂၂၂ kPa (psi)	Λ Λ̂ Υ̂ Υ̂ ΙΙ ΙΙΙΙΙΙ τ΄ Δ΄ ^{kPa (psi)}
	0-180		
	0-80		
VOLVO			

Location of the tire pressure placard

The decal specifies the designation for the factory-mounted tires on the vehicle, as well as load limits and inflation pressures.

(i) Note

The decals shown in the Owner's Manual do not claim to be exact reproductions of those found in the vehicle. The purpose is to show approximately how they look and about where they are located on the vehicle. The information that applies for your vehicle in particular is found on the decal on the vehicle.

16.4. Temporary tire sealing

16.4.1. Tire sealing system

The temporary tire sealing system^[1] (TMK) can be used to seal a puncture hole in a tire or to check and adjust the inflation pressure in the tire.

Models equipped with a spare wheel $^{[2]}$ do not have the tire sealing system.

Warning

California Proposition 65

Operating, servicing and maintaining a passenger vehicle can expose you to chemicals including engine exhaust, carbon monoxide, phthalates, and lead, which are known to the State of California to cause cancer and birth defects or other reproductive harm. To minimize exposure, avoid breathing exhaust, do not idle the engine except as necessary, service your vehicle in a well ventilated area and wear gloves or wash your hands frequently when servicing your vehicle. For more information go to www.P65Warnings.ca.gov/passenger-vehicle [https://www.p65warnings.ca.gov/products/passengervehicle].

The tire sealing system consists of a compressor and a bottle containing sealing compound. The sealing functions as a temporary repair.

(i) Note

The sealing compound effectively seals tires with punctures in the tread but may not be able to fully seal tires with punctures in the sidewall. Do not use the tire sealing system on tires with large tears, cracks or similar damage.

(i) Note

The compressor is intended for temporary tire sealing and is approved by Volvo.

Location

The tire sealing system is located in a foam block under the cargo compartment floor.

Sealing compound expiration date

The sealing compound bottle must be replaced if its expiration date has passed (see the decal on the bottle). Handle the old bottle as hazardous waste.

- ^[1] Certain models only.
- ^[2] Not available on all models.

16.4.2. Inflating tires using the compressor included in the tire sealing system

The vehicle's original tires can be inflated using the compressor in the tire sealing system.

- 1 The compressor must be switched off. Make sure that the switch is in the 0 (Off) position and take out the electrical cable and the hose.
- 2 Attach the hose directly onto the compressor's bottle holder and turn clockwise 90 degrees.

Move the warning sticker to the side of the compressor; it doesn't need to be affixed to the wheel side if the sealing compound is not used.

- 3 Unscrew the tire's valve cap and screw the hose's valve connector as far as possible onto the valve.
- 4 Connect the electrical cable to the nearest 12 V outlet and start the vehicle.

Inhaling exhaust fumes could lead to serious injury. Never leave the engine running in an enclosed space or a space without sufficient ventilation.

/ Warning

Never leave children unattended in the vehicle while the vehicle is running.

5 Start the compressor by moving the switch to the | (On) position.

6

(!) Important

Risk of overheating. The compressor should not be running for longer than 10 minutes at a time.

Inflate the tire to the pressure specified on the tire pressure decal on the driver's side door pillar. If the inflation pressure is too high, use the air release valve to release air.

7 Switch off the compressor. Remove the hose and the electrical cable.

(i) Note

- After inflating a tire, always replace the valve cap to help prevent valve damage caused by gravel, dirt, etc.
- Use plastic valve caps only. Metal caps could corrode and become difficult to remove.

(i) Note

The compressor is an electric device. Follow local regulations for disposal.

16.4.3. Using the tire sealing system

The temporary tire sealing system (TMK^[1]) can be used to seal a puncture in a tire. Read through all instructions before use.

Overview

Connecting

/!\ Warning

Please keep the following points in mind when using the tire sealing system:

- The sealing compound bottle contains natural rubber latex. These substances are harmful if swallowed.
- The contents of this bottle may cause allergic skin reactions or otherwise be potentially harmful to the respiratory tract, the skin, the central nervous system, and the eyes.

Precautions:

- Keep out of reach of children.
- Do not ingest the contents.
- Avoid prolonged or repeated contact with the skin. Remove any clothing that has come into contact with sealant.
- Wash thoroughly after handling. .

First aid:

- Skin: Wash affected areas of the skin with soap and water. Get medical attention if symptoms occur.
- Eyes: Flush with plenty of water for least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical attention if symptoms occur.
- Inhalation: Move the exposed person to fresh air. If irritation persists, get medical attention. .
- Ingestion: Get medical attention. .
- Disposal: Dispose of this material and its container at a hazardous or special waste collection point. Always follow . federal and local environmental regulations.

/!\ Warning

Do not remove the bottle or the hose while the tire sealing system is being used.

878 / 1010

Preparations 1

Turn on the vehicle's hazard warning flashers if the tire sealing system is to be used in an area with traffic.

If the puncture was caused by a nail or similar object, do not remove it. It will help seal the hole.

2 Peel off the speed limit sticker from the side of the compressor. Affix the decal to a clearly visible location on the windshield to remind the driver not to exceed this speed limit. Do not drive faster than 80 km/h (50 mph) while using a tire that has been temporarily repaired with the tire sealing system.

Also peel off the warning decal and affix it securely to the side of the wheel.

- Make sure the switch is in the O (Off) position and take out the electric cable and the hose. 3
- Attach the sealing compound bottle to the compressor and then turn clockwise 90 degrees. Δ The bottle is equipped with a check valve that prevents fluid leakage when the bottle is not connected to the compressor.
- Attach the hose in the bottle opening and turn clockwise 90 degrees. 5
- Unscrew the tire's valve cap and screw the hose's valve connector as far as possible onto the valve. 6

Begin tire sealing procedure 7

Connect the electrical cable to the nearest 12 V outlet and start the vehicle.

(i) Note

Make sure that none of the vehicle's other 12 V sockets are used while the compressor is running.

/!\ Warning

Never leave children unattended in the vehicle while the vehicle is running.

/!\ Warning

Inhaling exhaust fumes could lead to serious injury. Never leave the engine running in an enclosed space or a space without sufficient ventilation.

8 Start the compressor by moving the switch to the | (On) position.

When the compressor starts, the pressure can increase up to 7 bar (102 psi), but the pressure will decrease after approx. 30 seconds.

/!\ Warning

Never stand next to a tire being inflated with the compressor. If cracks, bulges, etc. form on the tire, switch off the compressor immediately. The vehicle should not be driven. Call roadside assistance to have the vehicle towed to a workshop for inspection/replacement of the tire. Volvo recommends an authorized workshop.

879/1010

(! Important

To help avoid overheating, the compressor should never be used for more than 10 minutes at a time.

10 Switch off the compressor and check the inflation pressure using the air pressure gauge. The inflation pressure should be between 1.8 bar (26 psi) and 2.5 bar (36 psi). If the inflation pressure is too high, use the air release valve to release air.

The sealing compound bottle must be removed in order to access the air release valve. Remove the bottle in the following order:

- 1. Remove the hose from the tire's valve.
- 2. Remove the hose from the bottle.
- 3. Remove the bottle from the compressor.
- 4. Reconnect the hose directly to the compressor.
- 5. Screw the hose back on to the tire's valve.
- 6. Release air by pressing the air release valve.

/ Warning

If pressure falls below 1.8 bar (26 psi), the hole in the tire may be too large. The vehicle should not be driven. Call roadside assistance to have the vehicle towed to a workshop for inspection/replacement of the tire. Volvo recommends an authorized workshop.

- **11** Switch off the compressor and remove the electrical cable.
- **12** Unscrew the hose from the tire's valve and screw the valve cap back on.

(i) Note

- After inflating a tire, always replace the valve cap to help prevent valve damage caused by gravel, dirt, etc.
- Use plastic valve caps only. Metal caps could corrode and become difficult to remove.
- 13 Clean the hose before stowing it and make sure that no sealing compound is leaking out.
- **14** Immediately drive the vehicle at least 3 km (2 miles) at a maximum speed of 80 km/h (50 mph) to allow the sealing compound to seal the tire, and then recheck the inflation pressure.

/ Warning

During the tire's first revolution, some sealing compound may spray out of the puncture hole. Before driving away, make sure that no one is near the vehicle who could be sprayed with sealing compound. Make sure no one is within 2 meters (7 feet) of the vehicle.

15 Rechecking the inflation pressure

Connect the hose to the tire's valve and screw the hose connector onto the valve as far as possible. The compressor must be switched off.

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note. 880 / 1010 16 Check the inflation pressure on the air pressure gauge.

- If the pressure is under 1.3 bar (19 psi), the tire is not sufficiently sealed. The vehicle should not be driven. Call roadside assistance to have the vehicle towed.
- If the inflation pressure is higher than 1.3 bar (19 psi), the tire must be inflated to the inflation pressure specified on the tire pressure decal on the driver's side door pillar (1 bar = 100 kPa = 14.5 psi). If the inflation pressure is too high, use the air release valve to release air.

Warning Check inflation pressure regularly.

Volvo recommends driving to the nearest authorized Volvo workshop to have the tire replaced/repaired. Inform the workshop that the tire contains sealing compound.

The sealing compound bottle and the hose must be replaced after use. Volvo recommends contacting an authorized Volvo workshop for replacement.

/ Warning

After using the tire sealing system, the vehicle should not be driven farther than approximately 200 km (120 miles).

(i) Note

The compressor is an electric device. Follow local regulations for disposal.

^[1] Temporary Mobility Kit

16.5. Driving in winter

16.5.1. Snow chains

Using snow chains and/or snow tires can help improve traction in winter driving conditions.

Volvo does not recommend use of snow chains on wheel dimensions larger than 18 inches

/ Warning

Use Volvo genuine snow chains or equivalent snow chains that are suitable for the vehicle model and the tire and wheel sizes. Only **one-sided** snow chains are permitted.

If uncertain about snow chains, Volvo recommends contacting an authorized Volvo workshop. Use of the wrong snow chains could cause serious damage to the vehicle and result in an accident.

Using snow chains could result in malfunction of the system for monitoring of tire inflation pressures * ^[1].

(Important

Snow chains can be used on the vehicle, with the following restrictions:

- Always follow the manufacturer's installation instructions carefully. Install chains as tightly as possible and retighten periodically.
- Only put snow chains on the front wheels (also applies to all-wheel drive vehicles).
- If accessory, aftermarket or "custom" tires and wheels with different dimensions than the original tires and wheels are used, snow chains in some cases may NOT be used. Sufficient distance between the chains and brakes, suspension and body components must be maintained.
- Check local regulations regarding the use of snow chains before installing.
- Never exceed the snow chain manufacturer's specified maximum speed limit. Under no circumstances should you exceed 50 km/h (30 mph).
- Avoid bumps, holes or sharp turns when driving with snow chains.
- Avoid driving on surfaces without snow as this wears out both the snow chains and the tires.
- The handling of the vehicle can be adversely affected when driving with chains. Avoid fast or sharp turns as well as locked wheel braking.
- Some types of strap-on chains affect brake components and therefore must NOT be used.

Consult a Volvo retailer for more information about snow chains.

* Option/accessory.

^[1] Tire Pressure Monitoring System (TPMS)

16.5.2. Snow tires

Snow tires are designed for winter driving conditions.

Volvo recommends winter tires especially developed for winter driving on all wheels if there is a risk of snow or ice. The tire dimensions vary depending on engine type. When driving with snow tires, the correct type of tires must be mounted on all four wheels.

Tips for changing snow tires

When switching between regular tires and snow tires, mark the tires according to which side they were mounted on, e.g. **L** for left and **R** for right.

Contact a Volvo retailer for assistance determining the most suitable rims and tires.

Studded tires

Studded tires should be broken in by driving 500–1000 km (300–600 miles) slowly and gently to help the studs settle properly in the tires. This gives the tire, and especially the studs, a longer service life.

(i) Note

Legal requirements concerning the use of studded tires may vary. Always follow local laws and regulations.

Tread depth

Road conditions with ice, slush and low temperatures place considerably higher demands on tires than summer conditions. Volvo therefore recommends not driving on snow tires that have a tread depth of less than 4 mm (0.15 inch).

16.5.3. Preparing for a long trip

It is important to have the vehicle's systems and equipment checked carefully before driving long distances.

Check that

- the engine is running properly and that fuel consumption is normal
- there are no leaks (fuel, oil or other fluid)
- the brake pedal is functioning properly
- all lights work
- tire tread depth and air pressure are at correct levels. Change to snow tires when driving in areas where there is a risk of snowy or icy roads
- the start battery is sufficiently charged
- the wiper blades are in good condition

It could also be a good idea to make sure the maps in the navigation system * are up to date, and to check requirements for vehicle loads, ferries, car trains, etc.

Keep in mind that data roaming charges may apply if the vehicle is connected to the Internet while in another country or service area.

* Option/accessory.

16.5.4. Winter driving

It is important to check the vehicle before driving in cold/snowy conditions to make sure it can be driven safely.

Before the cold season arrives:

- Make sure the engine coolant contains 50% antifreeze. This mixture helps protect the engine from frost erosion down to approx. –35 °C (–31 °F). Do not mix different types of antifreeze as this could pose a health risk.
- Keep the fuel tank well filled to prevent condensation from forming.
- Check the viscosity of the engine oil. Oil with low viscosity (thinner oil) improves cold-weather starting and reduces fuel consumption when driving with a cold engine.
- Check the condition and charge level of the start battery. Cold weather places greater demands on the start battery and reduces its capacity.
- Check the condition and charge level of the battery. Cold weather places greater demands on the battery and reduces its capacity.
- Use washer fluid containing antifreeze to help prevent ice from forming in the washer fluid reservoir.

See separate section for engine oil recommendations.

Slippery driving conditions

To help optimize traction and roadholding, Volvo recommends using snow tires on all wheels whenever there is a risk of snow or ice on the road.

(i) Note

Certain countries require use of winter tires by law. Not all countries permit the use of studded tires.

Practice driving on slippery surfaces under controlled conditions to learn how the vehicle reacts.

16.6. Tires

The function of the tires is to carry loads, provide traction on road surfaces, reduce vibrations and protect the wheels from wear.

The tires significantly influence the vehicle's driving characteristics. The type, dimensions, tire pressure and speed rating have a considerable impact on how the vehicle performs.

Your vehicle is equipped with tires according to the vehicle's tire information placard on the B-pillar (the structural member at the side of the vehicle, at the rear of the driver's door opening).

/ Warning

A damaged tire could cause the driver to lose control of the vehicle.

(!) Important

Some Volvo models are equipped with an Ultra High Performance tire and wheel combination designed to provide maximum dry pavement performance with consideration for hydroplaning resistance. They may be more susceptible to road hazard damage and, depending on driving conditions, may achieve a tread life of less than 30,000 km (20,000 miles). Even if this vehicle is equipped with Volvo's advanced AWD or stability system, these tires are not designed for winter driving, and should be replaced with winter tires when weather conditions dictate.

The tires have good road holding characteristics and offer good handling on dry and wet surfaces. It should be noted however that the tires have been developed to give these features on snow/ice-free surfaces.

Most models are equipped with "all-season" tires, which provide a somewhat higher degree of roadholding on slippery road surfaces than tires without the "all-season" rating. However, for good roadholding on icy or snow-covered roads, Volvo recommends snow tires on all four wheels.

When replacing tires, be sure that the new tires are the same size designation, type (radial) and preferably from the same manufacturer, on all four wheels. Otherwise there is a risk of altering the vehicle's roadholding and handling characteristics.

Recommended tires

On delivery, the car is equipped with Volvo original tires that have the VOL^[1] marking on the side of the tires. These tires have been designed specifically for your vehicle. It is therefore important when replacing tires that the new tires have this same marking to help maintain the vehicle's driving characteristics, comfort and fuel consumption.

New tires

Tires are perishable goods. After a few years, they will begin to harden and their friction properties will gradually deteriorate. Always replace tires with the freshest tires possible. This is particularly important for snow tires. A series of numbers is imprinted on the sidewall of the tire. The last four digits in the series is the Department of Transportation (DOT) stamp and indicates the week and year the tire was manufactured. The tire in the illustration has 0717 as the last four digits, which means it was manufactured week 7 of 2017.

Tire age

Tires degrade over time, even when they are not being used. It is recommended that tires generally be replaced after 6 years of normal service. Heat caused by hot climates, frequent high loading conditions or Ultra Violet (U.V.) exposure can accelerate the aging process. The temporary spare ^[2] should also be replaced at 6-year intervals, even if it has never been used. A tire with e.g., visible cracks or discoloration should be replaced immediately.

Tire economy

- Maintain correct tire pressure.
- Avoid fast starts, hard braking and tire screeching.
- Tire wear increases with speed.
- Correct front wheel alignment is very important.
- Unbalanced wheels impair tire economy and driving comfort.
- Tires should maintain the same direction of rotation throughout their lifetime.
- When you change tires, the tires with the most tread should be mounted on the rear axle to reduce the risk of rear wheel skid during hydroplaning, turning or hard braking on wet roads.
- Hitting curbs or potholes can damage the tires and/or wheels permanently.
- Never switch positions between the front and rear axles on vehicles with different front and rear tire or wheel dimensions.

Tire rotation

Driving style, tire pressure, climate and road conditions affect how quickly the tires age and exhibit signs of wear. Maintaining the correct tire pressure helps keep tread wear evenly distributed.

To help prevent major differences in tread depth and wear patterns forming on the tires, the front and rear wheels can be rotated, i.e. the front tires moved to the rear and the rear tires moved to the front. Ideally, tire rotation should be done the first time after approximately 5000 km (approx. 3100 miles) and thereafter at 10,000 km (approx. 6200 miles) intervals.

If you have any questions regarding tread depth, Volvo recommends consulting an authorized Volvo workshop. If significant differences in wear (> 1 mm difference in tread depth) between the tires have already occurred, the least worn tires should be mounted on the rear wheels. A front wheel skid is usually easier to control than a rear-wheel skid. It is therefore important that the rear wheels do not lose grip before the front wheels.

Important

Vehicles with different tire or wheel dimensions on the front and rear axles must always have the wider tires and/or wheels on the rear axle. Switching between front and rear wheels, e.g. to obtain more even tire wear between the front and rear tires, is not allowed.

Storing wheels and tires

When storing complete wheels (tires mounted on rims), they should be suspended off the floor or placed on their sides on the floor.

Tires not mounted on rims should be stored on their sides or standing upright, but should not be suspended.

(!) Important

Tires should preferably be stored in a cool, dry, dark place, and should never be stored in close proximity to solvents, gasoline, oils, etc.

/ Warning

- The wheel and tire sizes for your Volvo are specified to meet stringent stability and handling requirements. Unapproved wheel/tire size combinations can negatively affect your vehicle's stability and handling.
- Any damage caused by installation of unapproved wheel/tire size combinations will not be covered by your new vehicle warranty. Volvo assumes no responsibility for death, injury, or expenses that may result from such installations.

^[1] This may vary for certain tire dimensions.

^[2] Not available on all models.

16.7. Determining the vehicle's permitted weight

Properly loading your vehicle will provide maximum return of vehicle design performance.

Weight designations

Before loading your vehicle, familiarize yourself with the following terms for determining your vehicle's weight ratings, with or without a trailer, from the vehicle's Federal/Canadian Motor Vehicle Safety Standards (FMVSS/CMVSS) label, and the vehicle's tire information placard:

Curb weight

The weight of the vehicle including a full tank of fuel and all standard equipment. It does not include passengers, cargo, or optional equipment.

Capacity weight

All weight added to the curb weight, including cargo and optional equipment. When towing, towbar weight is also part of cargo weight.

Permissible axle weight

The maximum allowable weight that can be carried by a single axle (front or rear). These numbers are shown on the Federal/Canadian Motor Vehicle Safety Standards (FMVSS/CMVSS) label. The total load on each axle must never exceed its maximum permissible weight.

Gross vehicle weight (GVW)

The vehicle's curb weight + cargo + passengers.

Steps for Determining Correct Load Limit

- 1 Locate the statement "the combined weight of occupants and cargo should never exceed XXX kg or XXX lbs." on your vehicle's placard.
- 2 Determine the combined weight of the driver and passengers that will be riding in your vehicle.
- **3** Subtract the combined weight of the driver and passengers from XXX kg or XXX lbs.
- **4** The resulting figure equals the available amount of cargo and luggage load capacity. For example, if the "XXX" amount equals 1400 lbs. and there will be five 150 lb. passengers in your vehicle, the amount of available cargo and luggage load capacity is 650 lbs. (1400 750 (5 × 150) = 650 lbs.)
- **5** Determine the combined weight of luggage and cargo being loaded on the vehicle. That weight may not safely exceed the available cargo and luggage load capacity calculated in Step 4.
- 6 If your vehicle will be towing a trailer, load from your trailer will be transferred to your vehicle. Consult this manual to determine how this reduces the available cargo and luggage load capacity of your vehicle.

/ Warning

- Exceeding the permissible axle weight, gross vehicle weight, or any other weight rating limits can cause tire overheating resulting in permanent deformation or catastrophic failure.
- Do not use replacement tires with lower load carrying capacities than the tires that were original equipment on the vehicle because this will lower the vehicle's GVW rating. Use only tires with the correct load carrying capacity. Consult your Volvo retailer for information.

17.1. Loading

17.1.1. Loading recommendations

There are a number of things that are important to consider when carrying loads in or on the vehicle.

Load-carrying capacity is determined by the vehicle's curb weight. The total weight of all passengers and any installed accessories reduces the vehicle's load-carrying capacity by the corresponding amount.

1 Warning

The vehicle's driving characteristics change depending on the weight and position of the load.

Loading the cargo compartment/trunk

Keep the following in mind when loading:

- Position objects so they are pressing against the rear seat backrests.
- Heavy objects should be positioned as low as possible. Avoid placing heavy objects on folded-down seat backrests.
- Cover sharp corners with a soft cloth or similar to help prevent damage to the upholstery.
- Use the load anchoring eyelets and tensioning straps or similar to secure all objects.

/ Warning

In a head-on collision at a speed of 50 km/h (30 mph), an unsecured object weighing 20 kg (44 pounds) can reach a projectile weight equivalent to 1000 kg (2200 pounds).

/ Warning

If objects are loaded higher than the upper edge of the side windows, leave a 10 cm (4 in.) space between the objects and the window. Objects placed closer to this could impede the function of the inflatable curtain concealed inside the headlining.

/ Warning

Always secure the load. Otherwise, it may shift during heavy braking and injure people in the vehicle.

Cover sharp edges and sharp corners with something soft.

Turn off the engine and apply the parking brake when loading/unloading long objects. Otherwise, it is possible for the load to reach the gear lever or gear selector and move it to a drive position – which could cause the vehicle to begin rolling.

Extra cargo space

The rear seat backrests can be folded down to increase cargo space in the cargo compartment/trunk and simplify loading. If the rear seat backrests are folded down, make sure that no objects loaded into the vehicle prevent the WHIPS system for the front seats from functioning correctly.

A ski hatch * in the rear seat can be folded down to carry skis or other long, thin objects.

* Option/accessory.

17.1.2. Determining the vehicle's permitted weight

Properly loading your vehicle will provide maximum return of vehicle design performance.

Weight designations

Before loading your vehicle, familiarize yourself with the following terms for determining your vehicle's weight ratings, with or without a trailer, from the vehicle's Federal/Canadian Motor Vehicle Safety Standards (FMVSS/CMVSS) label, and the vehicle's tire information placard:

Curb weight

The weight of the vehicle including a full tank of fuel and all standard equipment. It does not include passengers, cargo, or optional equipment.

Capacity weight

All weight added to the curb weight, including cargo and optional equipment. When towing, towbar weight is also part of cargo weight.

Permissible axle weight

The maximum allowable weight that can be carried by a single axle (front or rear). These numbers are shown on the Federal/Canadian Motor Vehicle Safety Standards (FMVSS/CMVSS) label. The total load on each axle must never exceed its maximum permissible weight.

Gross vehicle weight (GVW)

The vehicle's curb weight + cargo + passengers.

Steps for Determining Correct Load Limit

- 1 Locate the statement "the combined weight of occupants and cargo should never exceed XXX kg or XXX lbs." on your vehicle's placard.
- 2 Determine the combined weight of the driver and passengers that will be riding in your vehicle.
- **3** Subtract the combined weight of the driver and passengers from XXX kg or XXX lbs.
- **4** The resulting figure equals the available amount of cargo and luggage load capacity. For example, if the "XXX" amount equals 1400 lbs. and there will be five 150 lb. passengers in your vehicle, the amount of available cargo and luggage load capacity is 650 lbs. $(1400 750 (5 \times 150) = 650 \text{ lbs.})$
- **5** Determine the combined weight of luggage and cargo being loaded on the vehicle. That weight may not safely exceed the available cargo and luggage load capacity calculated in Step 4.
- 6 If your vehicle will be towing a trailer, load from your trailer will be transferred to your vehicle. Consult this manual to determine how this reduces the available cargo and luggage load capacity of your vehicle.

/ Warning

- Exceeding the permissible axle weight, gross vehicle weight, or any other weight rating limits can cause tire overheating resulting in permanent deformation or catastrophic failure.
- Do not use replacement tires with lower load carrying capacities than the tires that were original equipment on the vehicle because this will lower the vehicle's GVW rating. Use only tires with the correct load carrying capacity. Consult your Volvo retailer for information.

17.1.3. Grocery bag holders

Grocery bag holders (hooks) help keep shopping bags in place and prevent them from falling over and spilling their contents in the cargo compartment.

On the sides of the cargo compartment

There is a grocery bag holder in the side panel on each side of the cargo compartment.

(!) Important

The grocery bag holders are only intended to hold weights up to 5 kg (11 lbs).

In the glove compartment

There is also a fold-out hook in the glove compartment that can be used to hang a shopping bag.

17.1.4. Cargo anchoring eyelets

The load anchoring eyelets in the cargo compartment can be used to secure objects with straps, a net, etc.

/!\ Warning

Hard, sharp and heavy objects in or protruding from the vehicle can cause injury in the event of hard braking.

Always secure large and heavy objects with a seat belt or cargo retaining straps.

17.1.5. Installing and removing the cargo net*

The cargo net helps prevent objects in the cargo compartment from entering the passenger compartment in the event of a sudden stop or hard braking.

The cargo net is attached at four points.

For safety reasons, the cargo net must always be mounted and secured according to the following description.

The net is made of strong nylon weave and can be attached in two different locations in the vehicle:

- Rear mounting behind the rear seats.
- Front mounting behind the front seats.

/!\ Warning

Objects in the cargo compartment must always be securely anchored, even with a correctly installed cargo net.

Installing the cargo net

Warning

Make sure that the cargo net's upper attachments are correctly mounted and that the straps are hooked securely into place.

Never use the net if it is damaged.

893 / 1010

(i) Note

With front mounting, the cargo net is most easily installed via the rear doors.

- 1 Fold out the cargo net with the upper hooks facing upwards.
- 2 Insert one of the net's hooks into the front or rear ceiling mounting point with the strap lock facing you.
- **3** Insert the net's other upper hook into the ceiling mounting point on the opposite side.

Make sure that the net's hooks are pushed forward as far as possible into their respective mounting points.

Rear mounting.

For rear mounting:

With the cargo net hooked into the rear ceiling mounting points, attach the net's straps into the front cargo anchoring eyelets in the cargo compartment.

Front mounting.

For front mounting:

With the net mounted in the front ceiling mounting points, hook the straps into the outer eyelets on the front seat rails behind the seats. Attaching the net is easier if the seat backrests are upright and the seats are moved slightly forward.

When moving the seat and backrest back again, make sure to not apply too much pressure against the net. Move the seat or backrest only until it touches the net.

(!) Important

If a seat or backrest is pressed with too much force back against the cargo net, the net and its ceiling brackets could be damaged.

Pull the straps until the cargo net is taut. 5

Removing the cargo net

The cargo net can be easily removed and folded up.

- Loosen the cargo net by pressing the button on the strap locks on each side and pulling to allow some slack. 1
- Press in the catches and release both of the strap hooks. 2
- Unhook the upper hooks and remove the net from the ceiling mounting points. 3
- Fold up the net and store it in its case. 4

Replace clothing hooks, if desired.

* Option/accessory.

17.1.6. Roof loads and load carriers

Volvo-developed load carriers are recommended for carrying loads on the roof of the vehicle.

These load carriers are specially designed to help prevent damage to your vehicle. Volvo load carriers are available from authorized Volvo retailers.

Carefully follow the installation instructions provided with the load carriers.

- Distribute the load evenly throughout the load carriers. Place heavier cargo at the bottom of the load. .
- Check periodically to ensure that the load carriers and load are properly secured. Secure the load firmly using tie straps or similar.
- If the load is longer than the vehicle, such as a canoe or kayak, attach the towing eyelet in its front outlet and secure the tie straps in it.
- The vehicle's wind resistance and fuel consumption increase with the size of the load.
- Drive smoothly. Avoid rapid acceleration, hard braking and fast cornering.

895 / 1010

/ Warning

The vehicle's center of gravity and driving characteristics are altered by roof loads.

Follow the vehicle's specifications regarding weights and maximum permitted load.

17.1.7. Driving with a trailer

There are a number of things to consider when towing a trailer, such as the towbar, the trailer and how the load is distributed in the trailer.

Load-carrying capacity is determined by the vehicle's curb weight. The total weight of all passengers and any installed accessories, e.g. towbar, reduces the vehicle's load-carrying capacity by the corresponding amount.

- Towbars used on the vehicle must be approved for the applicable use.
- Distribute the load on the trailer so that the weight on the towbar complies with the specified maximum towball weight. The tongue weight is calculated as part of the vehicle's payload.
- Increase the tire pressure to the recommended pressure for a full load.
- The engine is subjected to more load than usual when towing a trailer.
- Towing a trailer affects the vehicle's handling, durability and driving economy.
- Do not drive with a heavy trailer when the vehicle is very new. Wait until the mileage has reached at least 1000 km (620 miles).
- On long and steep downgrades, the vehicle's brakes are subjected to much more load than usual. When manually shifting, downshift and adapt speed accordingly.
- Follow applicable regulations regarding permitted speed and weight.
- Drive slowly when towing a trailer up a long and steep incline.
- The maximum trailer weights given only apply to altitudes up to 1000 meters (3280 feet) above sea level. At higher altitudes, engine power (and thus the vehicle's climbing ability) is decreased due to the reduced air density, and the maximum trailer weight must therefore be reduced. The weight of the vehicle and trailer must be decreased by 10% for each additional 1000 m (3280 feet) or part thereof.
- Avoid driving with a trailer on inclines of more than 12%.
- Avoid overloading and other incorrect use.
- The trailer's brakes must be balanced with the vehicle's brakes to help ensure safe stops (follow applicable local regulations).

() Important

- Bumper-attached trailer hitches must not be used on Volvos, nor should safety chains be attached to the bumper.
- Trailer hitches attaching to the vehicle rear axle must not be used.
- Never connect a trailer's hydraulic brake system directly to the vehicle brake system, nor a trailer's lighting system directly to the vehicle lighting system. Consult your nearest authorized Volvo retailer for correct installation.
- When towing a trailer, the trailer's safety chains or wire must be correctly fastened to the attachment points provided in the trailer hitch on the vehicle. The safety chain or wire must never be fastened to or wound around the towing ball.

(i) Note

The optional detachable trailer hitch may not be available in all markets or on all models. Consult your Volvo retailer.

(i) Note

Extreme weather conditions, towing a trailer, high altitude and lower fuel grade than recommended are factors that can significantly increase the vehicle's fuel consumption.

Trailer weights

Warning

Please adhere to the recommendations provided for trailer weight. If the recommendations are not followed, the vehicle and trailer may be difficult to control during evasive maneuvers and braking.

(i) Note

The specified maximum trailer weights are those permitted by Volvo. National vehicle regulations may set additional restrictions on trailer weight and speed. The trailer hitches may be certified for higher towing weights than the vehicle is permitted to tow.

Self-leveling suspension*

The vehicle's self-leveling system attempts to keep the vehicle at a constant level, regardless of load (up to the maximum permitted weight). When the vehicle is stationary, the rear end of the vehicle will be slightly lowered, which is normal.

Driving in mountainous areas

In certain conditions, there is a risk of overheating when driving with a trailer. If overheating of the engine and drive system is detected, a warning symbol will illuminate in the instrument panel and a message will appear.

The automatic transmission adapts the gear for the current load and engine speed.

Steep inclines

Do not lock the automatic transmission into a higher gear than what the engine can handle – it is not always preferable to drive in high gears at low rpm.

Parking on a hill

- 1 Depress the brake pedal.
- **2** Apply the parking brake.
- **3** Put the gear selector in P.
- 4 Release the brake pedal.

Put chocks behind the wheels when the vehicle is parked on a hill with a trailer attached.

Starting on a hill

- 1 Depress the brake pedal.
- **2** Put the gear selector in D.
- **3** Release the parking brake.
- **4** Release the brake pedal and start driving.

* Option/accessory.

17.2. Cargo compartment

17.2.1. Cargo net, steel cargo grid and cargo compartment cover

17.2.1.1. Installing and removing the cargo net*

The cargo net helps prevent objects in the cargo compartment from entering the passenger compartment in the event of a sudden stop or hard braking.

The cargo net is attached at four points.

For safety reasons, the cargo net must always be mounted and secured according to the following description.

The net is made of strong nylon weave and can be attached in two different locations in the vehicle:

- Rear mounting behind the rear seats.
- Front mounting behind the front seats.

/! Warning

Objects in the cargo compartment must always be securely anchored, even with a correctly installed cargo net.

Installing the cargo net

/ Warning

Make sure that the cargo net's upper attachments are correctly mounted and that the straps are hooked securely into place.

Never use the net if it is damaged.

(i) Note

With front mounting, the cargo net is most easily installed via the rear doors.

- 1 Fold out the cargo net with the upper hooks facing upwards.
- 2 Insert one of the net's hooks into the front or rear ceiling mounting point with the strap lock facing you.

3 Insert the net's other upper hook into the ceiling mounting point on the opposite side.

Make sure that the net's hooks are pushed forward as far as possible into their respective mounting points.

Rear mounting.

For rear mounting:

With the cargo net hooked into the rear ceiling mounting points, attach the net's straps into the front cargo anchoring eyelets in the cargo compartment.

Front mounting.

For front mounting:

With the net mounted in the front ceiling mounting points, hook the straps into the outer eyelets on the front seat rails behind the seats. Attaching the net is easier if the seat backrests are upright and the seats are moved slightly forward.

When moving the seat and backrest back again, make sure to not apply too much pressure against the net. Move the seat or backrest only until it touches the net.

(Important

If a seat or backrest is pressed with too much force back against the cargo net, the net and its ceiling brackets could be damaged.

5 Pull the straps until the cargo net is taut.

Removing the cargo net
The cargo net can be easily removed and folded up.

- 1 Loosen the cargo net by pressing the button on the strap locks on each side and pulling to allow some slack.
- **2** Press in the catches and release both of the strap hooks.
- **3** Unhook the upper hooks and remove the net from the ceiling mounting points.
- **4** Fold up the net and store it in its case.

Replace clothing hooks, if desired.

* Option/accessory.

17.2.2. Cargo compartment

The vehicle has a flexible cargo compartment that makes it possible to carry and secure large objects.

The cargo capacity of the vehicle can be considerably increased by folding down the rear seat backrests. Use load anchoring eyelets or grocery bag holders to help secure objects in place. The parcel shelf can be easily removed to make room for bulky loads.

The towing eyelet and tire sealing system, or the temporary spare tire*, are located under the cargo compartment floor.

* Option/accessory.

17.2.3. Grocery bag holders

Grocery bag holders (hooks) help keep shopping bags in place and prevent them from falling over and spilling their contents in the cargo compartment.

On the sides of the cargo compartment

There is a grocery bag holder in the side panel on each side of the cargo compartment.

(!) Important

The grocery bag holders are only intended to hold weights up to 5 kg (11 lbs).

In the glove compartment

There is also a fold-out hook in the glove compartment that can be used to hang a shopping bag.

17.2.4. Removing and storing the parcel shelf

The parcel shelf can be removed to increase the cargo space.

Removing the parcel shelf

1 💵

Detach the parcel shelf lifting eyes on both sides.

2 😫

Unhook the front edge of the parcel shelf and remove it.

Store the removed parcel shelf in a safe location where it cannot be damaged.

17.2.5. Folding up the cargo compartment floor

The cargo compartment floor can be secured in the raised position using the support arm.

- 1 Grasp the handle to fold up the cargo compartment floor.
- 2 Raise the support arm and insert the end in the recess on the underside of the cargo compartment floor.

> The cargo compartment floor will then be held in the raised position.

17.2.6. Cargo anchoring eyelets

The load anchoring eyelets in the cargo compartment can be used to secure objects with straps, a net, etc.

Warning

Hard, sharp and heavy objects in or protruding from the vehicle can cause injury in the event of hard braking.

Always secure large and heavy objects with a seat belt or cargo retaining straps.

17.2.7. Unlocking the tailgate using the key button

There is a button on the key for unlocking only the tailgate.

- Press the \longrightarrow button on the key. 1
- > The tailgate is unlocked and can be opened from the outside.

The side doors remain locked and armed. The lock and alarm indicator on the dashboard will go out to indicate that the vehicle is no longer fully locked.

If the tailgate is not opened within 2 minutes, it will be relocked and the alarm armed.

- 1 Press and hold the key's ⋩ button for a few seconds.
- > The tailgate will unlock and open. However, the side doors will remain locked and armed.

(i) Note

If the power tailgate system * has been working continuously for too long, it will be switched off to help prevent overheating. It can be used again after a few minutes.

* Option/accessory.

17.2.8. Setting maximum opening height for the power tailgate *

The tailgate can be set to stop opening at a certain height, for example if the vehicle is parked in a garage with a low ceiling.

Setting maximum opening height

- 1 Open the tailgate manually to the desired opening height.
- 2 Press the 🗢 button on the lower edge of the tailgate and hold it for about 3 seconds.
- > Two audio signals will sound to indicate that the position has been stored.

(i) Note

It is not possible to program an opening position lower than half-open tailgate.

Resetting maximum opening position

- 1 Open the tailgate manually to the fully open position.
- 2 Press the 🗢 button on the lower edge of the tailgate and hold it for about 3 seconds.

> Two audio signals will sound to indicate that the stored position has been erased.

* Option/accessory.

17.2.9. Operating the tailgate with a foot movement*

The tailgate can be opened and closed by making a foot movement* under the rear bumper. This function makes it easy to access the cargo compartment when your hands are full.

The sensor is located on the left-hand side of the bumper.

One of the vehicle's keys must be in range behind the vehicle, within about 1 meter (3 feet). This also applies when the vehicle is unlocked.

Foot movement operation

Kicking motion within the sensor's activation area.

Make **one** forward kicking motion with your foot under the left section of the rear bumper. Do not touch the bumper. Take a step back.

> A short signal sounds and the tailgate opens/closes.

If several kicking movements are made without a key within range, the function will be disabled for a short time.

Do not hold your foot in a kicking motion under the vehicle. This may cause activation to fail.

Interrupting opening or closing with a foot movement

1 Make **one** forward kicking motion while the tailgate is opening or closing to stop its movement.

The key does not need to be in range to interrupt opening or closing.

If the tailgate is stopped just before it closes completely, it will open the next time it is activated.

(i) Note

Keep the area around the foot movement sensor clean. The accumulation of dirt, ice or snow may interfere with its functioning.

(i) Note

Please note that the system could be inadvertently activated in a car wash if the key is within range.

* Option/accessory.

17.2.10. Unlocking the tailgate from inside the vehicle

The tailgate can be unlocked from inside the vehicle by pressing the button on the dashboard, to the side of the steering wheel.

- 1 Briefly press the \iff button on the dashboard.
- > The tailgate is unlocked and can be opened from the outside.

With the optional power tailgate*:

- 1 Press and hold the 🗯 button on the dashboard for a few seconds.
- > The tailgate will open.

(i) Note

If the power tailgate system * has been working continuously for too long, it will be switched off to help prevent overheating. It can be used again after a few minutes.

* Option/accessory.

17.2.11. Keyless tailgate unlock*

With keyless locking and unlocking, the tailgate can be unlocked by lightly touching the rubberized button underneath the tailgate handle.

(i) Note

One of the vehicle's keys must be within range behind the vehicle for unlocking to be possible.

The tailgate is held closed by an electronic locking mechanism.

To open:

- 1 Lightly press the rubberized pressure plate on the underside of the tailgate handle.
- > The lock will disengage.
- 2 Lift the outer handle to open the tailgate.

(!) Important

- Handle the rubber plate carefully to help prevent damage to its electrical connections. Very little force is needed for activation.
- Use the handle to lift do not apply force to the rubberized pressure plate.

The tailgate can also be opened by making a foot movement* under the rear bumper; see the separate section.

✓ Warning

Do not drive with the tailgate open. Toxic exhaust fumes can be sucked into the vehicle through the cargo compartment.

* Option/accessory.

17.3. Storage and passenger compartment

17.3.1. Passenger compartment interior

Overview of the passenger compartment interior and storage spaces.

Front seats

Storage compartment in door panel, card holder* next to the steering wheel, sun visors and glove compartment with fold-out hook.

Storage compartment at leg area, electrical outlets and USB ports* over the wireless phone charger*, cup holder and storage under armrest in tunnel console.

Rear seat

Storage compartment in the door panel, cup holders* in the center seat's backrest, storage pocket in the front seat's backrest and USB ports in the tunnel console.

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note. 910 / 1010

/ Warning

Store loose objects, such as a phone, camera, remote control for extra equipment, etc., in the glove compartment or another compartment. Otherwise, these could injure people in the vehicle in the event of hard braking or a collision.

() Important

Keep in mind that glossy surfaces can be easily scratched by e.g. metal objects. Do not place keys, phones or similar items on sensitive surfaces.

* Option/accessory.

17.3.2. Electrical outlets

There is a 12 V electrical outlet in the tunnel console and a 12 V electrical outlet* in the trunk/cargo compartment.

If a problem occurs with an electrical socket, contact a workshop - an authorized Volvo workshop is recommended.

12 V outlets

12 V outlet in the tunnel console, front seat.

The 12 V outlets can be used for devices intended for this such as MP3 players, coolers and cellular phones.

12 V outlet in the cargo compartment*.

* Option/accessory.

17.3.3. Using the electrical outlets

The 12 V outlet can be used for devices intended for this such as MP3 players, coolers and cellular phones.

The ignition must be in at least mode | for the outlets to supply current. The outlets will then be active as long as there is sufficient charge in the start battery.

If the engine is turned off and the vehicle is locked, the outlets will be deactivated. If the engine is turned off and the vehicle remains unlocked, the sockets will remain active for up to 7 minutes.

(i) Note

Bear in mind that using the electrical outlets when the engine is off could cause the starter battery to have too low of a charge level, which could limit other functionality.

Accessories connected to the electrical outlets can be activated even when the vehicle electrical system is off or if preconditioning is used. For this reason, disconnect plugs when they are not in use to prevent the starter battery from becoming discharged.

✓ Warning

- Do not use accessories with large or heavy plugs they could damage the outlet or come loose while you are driving.
- Do not use accessories that could cause disruptions to e.g. the vehicle's radio receiver or electrical system.
- Position the accessory so that there is no risk of it injuring the driver or passengers in the event of heavy braking or a collision.
- Pay attention to connected accessories as they can generate heat that could burn passengers or the interior.

Using 12 V outlets

- 1 Remove the stopper (tunnel console) or fold down the cover (trunk/cargo compartment) over the socket and plug in the device.
- 2 Unplug the device and put the stopper back in (tunnel console) or fold up the cover (trunk/cargo compartment) when the socket is not in use or left unattended.

() Important

The maximum power is 120 W (10 A) per outlet.

17.3.4. Using the glove compartment

The glove compartment is located on the passenger side. The glove compartment can be used to store the vehicle's printed owner's information and other items. There is also room for a pen and a card holder.

Glove compartment with fold-out hook.

The hook on the glove compartment can be folded out when the glove compartment is open. Once folded out, it can be used when the glove compartment is closed.

(!) Important

The hook must be either fully retracted or fully extended so that it doesn't break when the glove compartment is closed.

17.3.5. Sun visors

In the ceiling in front of the driver's and front passenger's seats, there are sun visors that can be lowered and angled to the side as necessary.

The illustration is generic - the design may vary.

The mirror lighting * comes on automatically when the visor is lifted up.

The mirror frame has a holder for e.g. cards or tickets.

* Option/accessory.

17.3.6. Tunnel console

The tunnel console is located between the front seats.

- Wireless phone charger*
- **2** Storage compartment with cup holder.
- **3** Storage compartment under the armrest.

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note.

/! Warning

Store loose objects, such as a phone, camera, remote control for extra equipment, etc., in the glove compartment or another compartment. Otherwise, these could injure people in the vehicle in the event of hard braking or a collision.

(!) Important

Keep in mind that glossy surfaces can be easily scratched by e.g. metal objects. Do not place keys, phones or similar items on sensitive surfaces.

(i) Note

One of the sensors for the alarm^{*} is located under the cup holder in the center console. Avoid placing coins, keys and other metal objects in the cup holder as this could trigger the alarm.

(i) Note

The USB ports can be used to e.g. charge a phone or tablet. Only the front USB port can be used to play media through the vehicle's speakers.

* Option/accessory.

17.3.7. Fuses under the left front seat

Fuses under the left front seat provide protection for e.g. electrical outlets, displays and door modules.

There are spaces for several extra fuses in the distribution box in the engine compartment.

Positions

The location of the fuses is shown on the inside of the cover. Functions and components in the fuse table cover several different models and engine variants. Therefore, a described fuse may apply to fewer components than those in the table, or be missing completely, depending on how the vehicle is equipped.

If a position has several values in the table, the value depends on variations in equipment level. If this is the case, follow the value on the replaced fuse. In the event of uncertainty, contact a workshop. An authorized Volvo workshop is recommended.

^[1] This type of fuse should be replaced by a workshop. An authorized Volvo workshop is recommended.

* Option/accessory.

17.4. Rear seat ski hatch*

The hatch in the rear seat backrest can be opened to transport long, narrow objects such as skis.

- 1 In the cargo compartment, grasp the ski hatch handle and pull it down.
- 2 Fold down the armrest in the rear seat.
- 3 Adjust the center seat head restraint upwards so the steel tubes do not block the opening.

If the private locking function is used, the ski hatch must be closed.

* Option/accessory.

18.1. Vehicle care

18.1.1. Interior cleaning

18.1.1.1. Cleaning the center display

Marks, stains, finger smudges etc. on the center display may affect its performance and readability. Clean the screen regularly with a microfiber cloth.

- 1 Turn off the center display by pressing and holding the Home button.
- 2 Wipe the screen with a clean, dry microfiber cloth using small, circular motions. If necessary, moisten the cloth slightly.
- **3** Reactivate the display by pressing the Home button briefly.

(!) Important

The microfiber cloth must be free of sand and dirt when cleaning the center display.

When cleaning the center display, apply only light pressure to the screen. Pressing too hard could damage the screen.

(!) Important

Do not spray liquid or corrosive chemicals directly onto the center display. Do not use window cleaners, cleaning agents, aerosol sprays, solvents, alcohol, ammonia or detergents that contain abrasives.

Never use abrasive cloths, paper towels or tissue paper, as these may scratch the center display.

18.1.1.2. Cleaning the instrument panel

Carefully wipe the glass covering the head-up display unit with a clean and dry microfiber cloth. If necessary, the cloth may be slightly moistened.

Never use cleaning agents. For difficult cleaning conditions, a special cleaning agent can be purchased at a Volvo retailer.

18.1.1.3. Cleaning the leather steering wheel

Use cleaning agents and car care products recommended by Volvo. Clean regularly and treat stains immediately. It is important to vacuum before using a cleaning agent.

Leather needs to breathe. Never cover the leather steering wheel with a plastic protector. Volvo Leather Care Kit 951 0251 and Leather Softener 943 7429 are recommended for cleaning the leather steering wheel. First, remove dirt, dust, etc. with a damp sponge or cloth.

(!) Important

Sharp objects such as rings could damage the leather on the steering wheel.

Treating stains on the steering wheel:

Type 1 (ink, wine, coffee, milk, sweat or blood)

1 Use a soft cloth or sponge. Wipe the steering wheel using a solution of 5% ammonia. For blood stains, mix approximately 2 dl (1 cup) of water with 25 g (one ounce) of salt and wipe the stain.

Type 2 (grease, oil, sauces or chocolate)

- 1 Same procedure as for Type 1 stains.
- 2 Finish by wiping the wheel with an absorbent paper or towel.

Type 3 (dry dirt or dust)

- **1** Remove the dirt/dust using a soft brush.
- 2 Same procedure as for Type 1 stains.

18.1.1.4. Cleaning the seat belt

Use cleaning agents and car care products recommended by Volvo. Clean regularly and treat stains immediately. It is important to vacuum before using a cleaning agent.

Use water and a synthetic soap solution. Specially designed textile cleaning agents are available for purchase at Volvo retailers. Make sure the belt is dry before it is retracted.

18.1.1.5. Cleaning the interior

Use cleaning agents and car care products recommended by Volvo. Clean regularly and treat stains immediately. It is important to vacuum before using a cleaning agent.

() Important

- Some colored clothing (for example, dark jeans and suede garments) may stain the upholstery. If this occurs, it is important to clean and treat these parts of the upholstery as soon as possible.
- Never use strong solvents such as washer fluid, gasoline, mineral spirit or concentrated alcohol to clean the interior as this can damage the upholstery as well as other interior materials.
- Never spray cleaning agent directly onto components that have electrical buttons and controls. Wipe instead with a damp cloth with cleaning agent.
- Sharp objects and Velcro can damage the car's textile upholstery.
- Only use cleaning agent on the type of material it is intended for.

18.1.1.6. Cleaning textile floor and inlay mats

Use of textile cleaner is recommended when cleaning textile mats. Clean regularly and treat stains immediately. It is important to vacuum before using a cleaning agent.

Remove the inlay mats to clean the floor mats and inlay mats separately. Each inlay mat is secured into place with pins.

- 1 Remove the inlay mat by grasping the inlay mat at each pin and lifting the mat straight up.
- 2 Use a vacuum to remove dust and dirt.

(i) Note

Do not swing or strike the inlay mats violently against another object to remove dirt as this could damage the mats.

- **3** After vacuuming, a specially designed textile cleaning agent should be used to remove stains on floor mats.
- 4 After cleaning, put the inlay mat back into place by pressing it in at each pin.

✓ Warning

- Never use more than one inlay mat at a time on the driver's floor. If any other type of floor mat is used, remove the original mat from the driver's seat floor before driving. All types of mats must be securely anchored in the attachment points in the floor. Make sure the floor mat does not impede the movement of the brake pedal or accelerator pedal in any way, as this could be a serious safety hazard.
- Volvo's floor mats are specially manufactured for your vehicle. They must be properly secured in the attachment points in the floor to help ensure they cannot slide and become trapped under the pedals.

18.1.1.7. Cleaning interior plastic, metal and wood surfaces

Use cleaning agents and car care products recommended by Volvo. Clean regularly and treat stains immediately.

A lightly dampened microfiber cloth is recommended for cleaning interior details and surfaces. These cloths are available for purchase at Volvo retailers.

Never scrape or rub a stain. Never use strong stain removers.

(!) Important

Do not use solvent containing alcohol to clean the instrument panel glass.

(!) Important

Keep in mind that glossy surfaces can be easily scratched. Wipe these surfaces with a clean and dry microfiber cloth using small, circular motions. If necessary, moisten the cloth lightly with clean water.

18.1.1.8. Cleaning leather upholstery*

Use cleaning agents and car care products recommended by Volvo. Clean regularly and treat stains immediately. It is important to vacuum before using a cleaning agent.

Volvo's leather upholstery* is treated to protect its original appearance. Over time, sunlight, grease, dirt, etc. could break down the protective layer. This could result in scratches and cracking.

Leather upholstery* is a natural product that changes and acquires a beautiful patina over time. Regular cleaning and treatments are required to preserve the qualities and color of the leather. Volvo offers a comprehensive product, Volvo Leather Care KitWipes, for cleaning and treating leather upholstery. When used as directed, it helps preserve the leather's protective coating.

For optimal results, Volvo recommends cleaning and applying protective cream one to four times a year (or more often as needed). Volvo Leather Care Kit 951 0251 and Volvo Leather Softener 943 7429 are available for purchase at Volvo retailers.

Cleaning the leather upholstery

- 1 Apply the leather cleaner to a damp sponge and squeeze it until the cleaner foams.
- 2 Move the sponge in circular motions to apply the foam to the stain.
- 3 Dampen the stain thoroughly with the sponge. Let the sponge absorb the stain and do not rub.
- **4** Dry the stain using a soft towel and let the leather dry completely.

Protecting the leather upholstery

- 1 Apply a small amount of leather protector to a cloth and then apply the protector to the leather using light circular movements.
- 2 Let it dry for approximately 20 minutes.
- > Protecting the leather upholstery makes it better able to withstand sunlight's harmful UV rays.

^{*} Option/accessory.

18.1.1.9. Cleaning fabric upholstery and ceiling liner

Use of textile cleaner is recommended when cleaning textile and nubuck textile materials. Clean as needed and treat stains immediately.

() Important

Never scrape or rub a stain because this may damage the upholstery.

(!) Important

Never use stain removers or strong solvents because these may damage the upholstery.

Cleaning textile upholstery

- 1. Start by vacuuming the upholstery.
- 2. Follow the instructions of the textile cleaner.
- 3. When cleaning upholstery, a spray extraction cleaner is recommended for sucking up cleaning fluids and rinse water.

(!) Important

Certain dyed clothing (such as denim and suede garments) may stain the upholstery. Difficult stains, like oil, can be difficult to remove.

(!) Important

Always clean all of the upholstery, even if it only has isolated stains. This helps to prevent permanent water rings.

(i) Note

Do not remove the upholstery when cleaning.

Cleaning the ceiling liner

- 1. Carefully brush the ceiling liner using a soft brush.
- 2. Follow the instructions of the textile cleaner.
- 3. Then use a soft, lint-free cloth to wipe the ceiling liner.

Failure to take care during cleaning could lead to damage to the ceiling liner.

18.1.2. Exterior cleaning

18.1.2.1. Cleaning exterior lights

Dirty lights do not work as well. Clean them regularly, e.g. when refueling.

Wash exterior lights, such as headlights and taillights, using a soft and clean sponge, mild soap and lukewarm water.

It is normal for condensation to form temporarily on the inside of the glass during washing. All outer lights are designed to withstand this. Condensation is normally ventilated out of the light housing once the light has been illuminated for a short period of time.

$(\ !\)$ Important

Do not use strong detergents or chemicals to clean the lights. These types of products, such as those containing alcohol, may cause cracks in the glass.

(!) Important

Do not rub with a dry sponge or rag as this could cause electric discharge and damage the components in the light.

18.1.2.2. Cleaning the wiper blades

The vehicle should be washed as soon as it becomes dirty. The longer the dirt remains, the more difficult it will be to keep the vehicle clean. It could also lead to paint damage. Wash the vehicle in a car wash or garage with an oil separator. Use a car washing detergent recommended by Volvo.

Asphalt, dust and salt residue on wiper blades, as well as insects, ice etc. on the windshield, shorten the service life of wiper blades.

When cleaning, put the wiper blades in the service position.

(i) Note

Wash the wiper blades and windshield regularly with a lukewarm soap solution or vehicle shampoo. Do not use strong solvents.

18.1.2.3. Paintwork

The paintwork consists of multiple layers. It is an important part of the vehicle's corrosion protection and therefore needs to be checked regularly.

The most common types of paint damage are minor stone chips, scratches and damage to e.g. the edges of fenders, doors and bumpers. To help prevent corrosion, paint damage should be rectified immediately.

18.1.2.4. Color codes

The color code decal is placed on the vehicle's left-side door pillar (B-pillar) between the front and rear doors and is visible when the left front door is open.

Color code

Sample color code (1): US models.

Sample color code (1): Canadian models.

- 1 Exterior color code
- 2 Secondary exterior color code (if applicable)

18.1.2.5. Touching up minor paint damage

The paintwork is an important part of the vehicle's corrosion protection and therefore needs to be checked regularly. The most common types of paint damage are minor stone chips, scratches and damage to e.g. the edges of fenders, doors and bumpers.

To help prevent corrosion, paint damage should be rectified immediately.

(i) Note

Make sure the surface is clean and dry before performing any touch-ups to the paint. The surface temperature should be at least 15 °C (59 °F).

Materials that might be needed

- Primer special adhesive primer is available in a spray can for e.g. plastic-covered bumpers.
- Base coat and clear coat available in spray cans or as a touch-up pen/stick^[1].
- Masking tape.
- Fine-grain sandpaper.

Applying touch-up paint to a damaged surface

If the damage has not reached all the way down to the metal, then touch-up paint can be applied immediately after the surface has been cleaned.

1 Place a strip of masking tape over the damaged surface. Pull the tape off so that any loose flakes of paint adhere to it.

If the damage goes down to the bare metal, you may need to use primer first. If the paint damage is on a plastic surface, an adhesive primer should be used for better results. Spray the primer into the lid of the spray can and brush on thinly.

- 2 Light sanding with a very fine-grained sandpaper or similar may be required before painting (e.g. if there are uneven edges). Clean the area carefully to remove dirt, grease, salts, etc. and let it dry.
- **3** Thoroughly mix the primer and apply it with a small brush, toothpick or similar. When the primer is dry, apply one or more coats of paint and then a clear coat, letting the paint dry between each application.

If there is a longer scratch, follow the same procedure as above, but first mask off the surrounding area to protect the undamaged paint.

Touch-up pens/sticks and spray paint are available at Volvo retailers.

(i) Note

If the stone chip has not gone down to the bare metal and an undamaged coat of paint remains, apply base coat and clear coat immediately after cleaning the surface.

^[1] Follow the instructions on the packaging for the touch-up pen/stick carefully.

18.1.2.6. Cleaning the exterior

The vehicle should be washed as soon as it becomes dirty. This makes the vehicle easier to clean because dirt does not attach as strongly. It also reduces the risk of scratches and keeps the vehicle looking new. Wash

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note. 929 / 1010 the rims at a car wash or garage with an oil separator. Use car care products recommended by Volvo.

18.1.2.7. Corrosion protection

Your vehicle is constructed with protection against corrosion.

Corrosion protection for the body consists of modern metallic protective coatings on the sheet metal, a high-quality painting process, corrosion-protected and minimized metal overlap, and shielding plastic components, abrasion protection and supplemental rust inhibitor in exposed areas. In the chassis, exposed components of the wheel suspension are made of corrosion-resistant cast aluminum.

Inspection and maintenance

The corrosion protection does not normally require maintenance, but keeping the vehicle clean helps reduce the risk of corrosion. The use of strong alkaline or acidic cleaning fluids should be avoided on shiny body components. Any stone chips in the paint should be touched up as soon as they are discovered.

18.1.2.8. Automatic car washes

It is important to prepare the vehicle before washing it in an automatic car wash. Carefully follow the instructions for vehicle handling before and during the car wash.

Automatic car washes can be a fast and easy way to clean the vehicle, but they do not reach all the parts of the vehicle that need regular cleaning. Volvo recommends supplementing automatic car washing with hand-washing.

(i) Note

Avoid washing a brand new vehicle in automatic car washes for the first few months after it leaves the factory. This will allow the paintwork to fully set.

Preparations before washing

In automatic car washes in which the vehicle is pulled through the car wash, it is important to switch off functions that prevent the vehicle from rolling freely.

- Secure or remove protruding exterior parts such as retrofitted auxiliary lights, antennas, etc.
- Make sure that the automatic rain sensor function is switched off. The windshield wipers must be switched off throughout the car wash to avoid the risk of damage.
- While the vehicle is stationary, use the 🕲 button in the tunnel console to turn off the Auto-hold brake function.
- Switch off the function for automatically activating the parking brake via settings in the center display.

During the car wash

(!) Important

Keep the vehicle's windows, doors and tailgate closed throughout the car wash.

If the vehicle is equipped with keyless locking and unlocking*:

Take out the key and place it in the open in the front section of the vehicle during the car wash. This minimizes the risk of unintentionally pressing the button that opens the tailgate, or of the key being incorrectly detected outside of the vehicle.

- 1 Drive into the car wash and stop at the designated place.
- **2** Put the gear selector in N.
- **3** Put the vehicle in ignition mode 0 by pressing the start button and holding it in for a few seconds.
- > The motor is switched off, while the vehicle can roll freely.
- **4** The vehicle goes through the automatic car wash.

Keep your seat belt fastened throughout the car wash.

> Don't forget to reset the adjustments made before the car wash.

After the car wash

Depress the brake pedal lightly for a short time while driving after the brake pads have been exposed to moisture. The friction will heat up the brakes so that they will dry more quickly, reducing the risk of corrosion.

✓ Warning

Always test the foot brake and parking brake after washing the vehicle to ensure they are functioning properly.

* Option/accessory.

18.1.2.9. Cleaning exterior plastic, rubber and trim components

The vehicle should be washed as soon as it becomes dirty. The longer the dirt remains, the more difficult it will be to keep the vehicle clean. It could also lead to paint damage. Use a car washing detergent recommended by Volvo.

A special cleaning agent available from Volvo retailers is recommended for the cleaning and care of colored plastic parts, rubber and trim components, e.g. glossy trim. Follow the usage instructions for the cleaning agent carefully.

Avoid using car washing detergents with a pH value lower than 3.5 or higher than 11.5. Doing so could result in the discoloring of anodized aluminum surfaces* (as shown in the illustrations below). Abrasive polishing agents are not recommended for these areas (as shown in the illustrations below).

Components that should be washed with a cleaning product with a pH value between 3.5 and 11.5.

(!) Important

Avoid waxing and polishing plastic and rubber.

If using degreaser on plastic and rubber, only rub (if necessary) with slight pressure. Use a soft sponge.

Polishing glossy trim moldings can wear away or damage the glossy surface layer.

Polish containing abrasives must not be used.

(!) Important

Avoid washing the vehicle with cleaner with a pH value below 3.5 or above 11.5. This could cause discoloration of anodized aluminum components like the roof rail and around the side windows.

Never use metal polishing agent on anodized aluminum components. This could cause discoloration and destroy the surface treatment.

* Option/accessory.

18.1.2.10. Cleaning rims

The vehicle should be washed as soon as it becomes dirty. The longer the dirt remains, the more difficult it will be to keep the vehicle clean. It could also lead to paint damage. Wash the rims at a car wash or garage with an oil separator. Use a car washing detergent recommended by Volvo.

Use a rim cleaning agent recommended by Volvo.

Strong rim cleaning agents could damage the surface and stain the chromed aluminum rims.

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note. 932 / 1010

18.1.2.11. Hand washing

The vehicle should be washed as soon as it becomes dirty. This makes the vehicle easier to clean because dirt does not attach as strongly. It also reduces the risk of scratches and keeps the vehicle looking new. Wash the vehicle in a car wash or garage with an oil separator and use car washing detergent. Use cleaning agents and car care products recommended by Volvo.

Important to keep in mind when handwashing your vehicle

- Avoid washing the vehicle in direct sunlight. This could cause the detergent or wax to dry out and become abrasive.
- Remove bird droppings from paintwork as soon as possible. It contains chemicals that affect and discolor paintwork very quickly. Use e.g. soft paper or a sponge soaked in lots of water. Consult an authorized Volvo workshop for assistance removing discoloration.
- Hose down the underbody, including the wheel housings and bumper.
- Hose down the entire vehicle and remove any loose dirt, droppings etc. to reduce the risk of scratches from washing. Do not spray directly onto locks.
- If necessary, use cold degreaser on heavily soiled surfaces. Note that in such cases the surfaces must not be hot from the Ð sun.
- Wash using a sponge, car washing detergent and plenty of lukewarm water. Make sure that the sponge is clean. A dirty sponge can scratch the paint.
- Clean the wiper blades with lukewarm soap solution or car washing detergent. Ð
- Dry the vehicle using a clean, soft chamois or a squeegee. Try not to let drops of water dry in strong sunlight. This could Ð cause water drying stains that may need to be polished out.
- In areas with heavy industrial emissions, more frequent washing of the vehicle's exterior is recommended.
- Tar spots from asphalt may remain even after washing. Use a Volvo-recommended tar remover to remove these spots after washing the vehicle.

Warning

Always entrust engine washing to a workshop. If the engine is hot, there is a risk of fire.

Important (!)

Dirty headlights do not work as well. Clean them regularly, e.g. when refueling.

Do not use corrosive cleaners. Use water and a non-abrasive sponge. See separate section for more information.

(i) Note

Exterior lighting such as headlights and taillights may develop temporary condensation on the inside of the lens. This is normal. All exterior lighting is designed to resist this. Condensation is normally vented out of the lamp housing once the light has been lit for some period of time.

933 / 1010

Important (!)

- Make sure that the panoramic roof* and sun shade are closed before washing the vehicle.
- Never use abrasive polishing agents on the panoramic roof.
- Never use wax on the rubber seals around the panoramic roof.

(!) Important

Remember to remove dirt from the drain holes in the doors, sills and panoramic roof after washing the vehicle.

* Option/accessory.

18.1.2.12. High-pressure washing

The vehicle should be washed as soon as it becomes dirty. The longer the dirt remains, the more difficult it will be to keep the vehicle clean. It could also lead to paint damage. Wash the vehicle in a car wash or garage with an oil separator. Use a car washing detergent recommended by Volvo.

If washing the vehicle with a high-pressure wash, use sweeping movements and keep the nozzle at least 30 cm (13 in.) from the vehicle. Do not spray directly on the lock or on the inside of the fuel filler door or charger door.

(!) Important

Do not use water hotter than 60 °C (140 °F) on the exterior lights, such as headlights and taillights. See separate section for more information.

18.1.2.13. Polishing and waxing

Polish and wax the vehicle when the paint is dull or to provide extra protection. The vehicle does not need to be polished until it is at least a year old. However, it can be waxed during the first year. Do not polish or wax the vehicle in direct sunlight. The surface of the vehicle should not be warmer than 45 °C (113 °F).

- Wash and dry the vehicle very carefully before polishing or waxing. Remove asphalt and tar stains with asphalt remover or paint thinner. More stubborn stains can be removed with a grinding paste designed for vehicle paint. Use cleaning agents recommended by Volvo.
- Use polish first and then liquid or paste wax. Follow the instructions on the package carefully. Many products contain both . polish and wax.

934 / 1010

(!) Important

Never polish or wax initially matte exterior details on the vehicle. This could destroy the matte effect and make the surface permanently shiny.

(!) Important

Avoid waxing and polishing plastic and rubber.

If using degreaser on plastic and rubber, only rub (if necessary) with slight pressure. Use a soft sponge.

Polishing glossy trim moldings can wear away or damage the glossy surface layer.

Polish containing abrasives must not be used.

(!) Important

Use cleaning agents recommended by Volvo. Other treatments, such as preservation, sealing, protection, luster sealing or similar, could damage the paintwork. Paintwork damage caused by such treatments are not covered by Volvo's warranty.

18.2. Wiper blades and washer fluid

18.2.1. Wiper blades and washer fluid

The wipers and the washer fluid are designed to improve visibility and the headlight pattern.

The washer nozzles are heated* automatically in cold weather to prevent the washer fluid from freezing.

When there is approximately 1 liter (1 qt) of washer fluid remaining, a message to refill will appear in the instrument panel.

* Option/accessory.

18.2.2. Putting the wiper blades in service position

The windshield wiper blades must be in the service (vertical) position for certain operations, e.g. replacing the blades.

Windshield wipers in the service position.

The windshield wipers must be in the service position when replacing, washing or lifting the blades (e.g. to scrape ice or snow from the windshield).

(!) Important

Before placing the wipers in service position, ensure that they have not frozen to the windshield.

Activating/deactivating service position

The service position can be activated/deactivated when the vehicle is stationary and the windshield wipers are switched off. Service position is activated/deactivated via Function view in the center display:

Tap the Wiper Service Position button. The indicator light in the button will illuminate when service position is activated. The wipers will move to the service position when activated. To deactivate the service position, tap Wiper Service Position once. The indicator light in the button will go out when service position is deactivated.

The wiper blades will also move out of the service position if:

- The windshield wipers are turned on. .
- The windshield washers are turned on.
- The rain sensor is activated.
- The vehicle begins moving. Ð

(!)Important

If the wiper arms in service position are raised from the windshield, they must be folded back against the windscreen before activating wiping, washing or rain sensor as well as before departure. This is to prevent scratching the paint on the hood.
18.2.3. Refilling washer fluid

Washer fluid is used to keep the headlights, windshield and rear window clean. Washer fluid containing antifreeze should be used in very cold weather (below-freezing temperatures).

Fill washer fluid into the reservoir with the blue cover. The reservoir is used for the windshield washer, tailgate window washer and headlight washer*.

(i) Note

When there is approximately 1 liter (1 qt) of washer fluid remaining, the message **Washer fluid Level low, refill** and the symbol will be displayed in the instrument panel.

Recommended grade: Washer fluid recommended by Volvo, with frost protection during cold weather and temperatures below the freezing point.

() Important

Use Volvo's original washer fluid or an equivalent fluid with the recommended pH value between 6 and 8, diluted as recommended, e.g. in a 1:1 solution with pH-neutral water.

() Important

Use washer fluid with anti-freeze when temperatures are below the freezing point to help keep the pump, reservoir and hoses from freezing.

Volume:

- Vehicles with headlight washing: 5.5 liters (5.8 qts).
- Vehicles without headlight washing: 3.5 liters (3.7 qts).
- * Option/accessory.

18.2.4. Changing rear window wipers

The wiper blades help remove water from the windshield and rear window. Along with the washer fluid, they are designed to clean the glass and help improve visibility while driving. The windshield and rear window wiper blades can be replaced.

Changing rear window wipers

Lift the wiper arm from the window and pull the lower section of the blade to the right.

1 💵

Grasp the center of the wiper blade and lift it from the window to the stop position.

(i) Note

When the wiper arm is about halfway extended, resistance may be felt as the wiper stops in the stop position. This stop helps prevent the wiper arm from falling back onto the rear window. The wiper arm must be pulled past the locking position stop in order to change the wiper blade.

2 😫

Grip the lower part of the blade and pull to the right until the blade loosens from the arm.

- 3 Press the new wiper blade until it clicks into place. Check to make sure the blade is securely in place.
- **4** Fold the wiper arm back toward the window.

(!) Important

Check the blades regularly. Neglected maintenance shortens the life of the blades.

18.2.5. Replacing windshield wiper blades

The wiper blades help remove water from the windshield and rear window. Along with the washer fluid, they are designed to clean the glass and help improve visibility while driving. The windshield and rear window wiper blades can be replaced.

1 1

Raise the wiper arms to the service position. Service position is activated/deactivated via the function view in the center display when the car is stationary and the windshield wipers are not on. Press the button on the wiper blade attachment and pull the wiper blade straight out, parallel with the wiper arm.

2 2

Slide in a new wiper blade until it clicks into place.

- **3** Check to make sure the blade is securely in place.
- **4** Press the wiper blade back against the windshield.

Wiper blades come in varying lengths

(i) Note

When changing wiper blades, make sure that the blades are of different lengths. The blade on the driver's side is longer than the one on the passenger side.

18.3. Replacing bulbs

18.3.1. Replacing rear turn signal bulbs

The rear turn signal bulbs are located behind the panel in the side of the cargo compartment.

1. Press in the top edge of the panel cover to remove it.

2. Move aside the insulation to access the support bridge.

3. Unscrew the spring screw by turning counterclockwise, press the clips into the sides and remove the support bridge. It is simplest to leave one screw in place in the support bridge.

- 4. Remove the gray bulb holder by turning it counterclockwise and pulling it out.
- 5. Remove the bulb by pressing it in and turning it counterclockwise.
- 6. Insert the new bulb by pressing it in and turning it clockwise.
- 7. Put the panel back in place and turn it clockwise.
- 8. Install the support bridge using the supplied spring screw and make sure that the clip is positioned correctly. Tighten the spring screw until it stops, max. 2 Nm (1.5 ft lbs).
- 9. Reposition the insulation, hook the panel and then press it back into place.

(!) Important

Never touch the bulb glass with your bare fingers. Grease and oils from your fingers vaporize in the heat and will leave a deposit on the reflector, which may damage it.

18.3.2. Replacing the brake light bulb

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note. 941 / 1010 The brake light bulbs are located behind the panel in the side of the cargo compartment.

- 1. Press in the top edge of the panel cover to remove it.
- 2. Move aside the insulation to access the brake light bulb.

- 3. Remove the black bulb holder by turning it counterclockwise and pulling it out.
- 4. Remove the bulb by pressing it in and turning it counterclockwise
- 5. Insert the new bulb by pressing it in and turning it clockwise.
- 6. Put the panel back in place and turn it clockwise.
- 7. Reposition the insulation, hook the panel and then press it back into place.

(!) Important

Never touch the bulb glass with your bare fingers. Grease and oils from your fingers vaporize in the heat and will leave a deposit on the reflector, which may damage it.

18.3.3. Replacing the rear fog light bulb

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note.

The rear fog light is located in the rear bumper on the driver's side.

The rear fog light is only located on the driver's side.

- 1 Remove the fog light unit on the driver's side by inserting a flat object (e.g. a kitchen knife or screwdriver) behind the light kit's narrower short side and prying out the fog light unit.
- **2** Unplug the connector.
- 3 Remove the bulb holder by turning it counterclockwise and pulling it out.
- **4** Remove the bulb by pressing it in and turning it counterclockwise.
- 5 Insert the new bulb by pressing it in and turning it clockwise.
- 6 Put the panel back in place and turn it clockwise.
- 7 Plug in the connector.
- 8 Insert the hook on the wide part of the fog light unit in the rear bumper and rotate the unit until the clips fasten into place.

18.3.4. Replacing bulbs

Bulb types vary depending on model and equipment level. If a light bulb^[1] breaks, it can be replaced by following the procedure shown in the Owner's Manual.

If there is a problem with an LED^[2] light, the entire lamp unit will normally need to be replaced.

(i) Note

For information on lights not mentioned in the Owner's Manual, contact a Volvo retailer or an authorized Volvo workshop.

/! Warning

The vehicle electrical system must be in ignition mode 0 when bulbs are replaced.

(!) Important

Never touch the bulb glass with your bare fingers. Grease and oils from your fingers vaporize in the heat and will leave a deposit on the reflector, which may damage it.

(i) Note

If the error message persists after the defective bulb has been replaced, we recommend a visit to an authorized Volvo workshop.

(i) Note

Exterior lighting such as headlights and taillights may develop temporary condensation on the inside of the lens. This is normal, and all exterior lighting is designed to resist this. Condensation is normally vented out of the lamp housing once the light has been lit for some period of time.

^[1] Some vehicles do not have any light bulbs.

^[2] LED (Light Emitting Diode)

18.3.5. Location of exterior lights

The vehicle's exterior lighting consists of different bulbs. LED^[1] bulbs must be replaced by a workshop. An authorized Volvo workshop is recommended.

Front lights

- 1 Daytime running lights/position lamps/direction indicators (LED)
- 2 High beam (LED)
- 3 Low beam (LED)
- 4 Front fog light/cornering illumination* (LED)

Rear bulbs

- 1 Brake light central, high-mounted (LED)
- 2 Fog light
- **3** Parking light (LED)
- 4 Turn signals
- 5 Brake lights
- 6 Backup light (LED)

^[1] LED (Light Emmitting Diode)

* Option/accessory.

18.3.6. Bulb specifications

Specifications for replaceable light bulbs.

If you are experiencing problems with any lights other than light bulbs, contact a workshop^[1]. If there is a problem with an LED^[2] light, the entire lamp unit will normally need to be replaced.

Function	W ^[3]	Туре
Rear turn signals	24	PY24W
Brake lights	21	H21W LL
Rear fog light	21	H21W LL

^[1] An authorized Volvo workshop is recommended.

^[2] LED (Light Emitting Diode)

^[3] Watt

18.3.7. Checking trailer lights*

When connecting a trailer, make sure that the trailer's lights are functioning before starting to drive.

Checking trailer lights *

Automatic check

When the trailer has been connected to the vehicle's electrical system, its lights can be checked by automatically activating them. This function helps the driver check that the trailer's lights are functioning correctly before starting to drive.

In order to perform this check, the vehicle must be switched off.

- 1 When a trailer is connected to the towbar, the message Automatic Trailer Lamp Check will appear in the instrument panel.
- Acknowledge the message by pressing the \bigcirc button on the right-side steering wheel keypad. 2
- > The light check will begin.
- Get out of the vehicle to perform the check. 3
- > All of the lights on the trailer will begin flashing, and then illuminate separately one at a time.
- Visually check that all of the trailer's lights are functioning correctly. 4
- After a short time, all of the trailer's lights will start flashing again. 5
- > The light check is completed.

Disabling the automatic check

The automatic light check can be disabled in the center display.

- Tap Settings in the Top view. 1
- Tap My Car → Lights and Lighting. 2
- Deselect Automatic Trailer Lamp Check. 3

Manual check

If the automatic check has been disabled, the check can be started manually.

- Tap Settings in the Top view. 1
- Tap My Car → Lights and Lighting. 2
- Select Manual Trailer Lamp Check. 3
- > The light check will begin. Get out of the vehicle to perform the check.

Trailer rear fog light

When a trailer is connected, the vehicle's rear fog light may not illuminate and rear fog light functionality is instead transferred to the trailer. If this is the case, check to see if the trailer is equipped with a rear fog light before activating the vehicle's fog lights when driving with a trailer to help ensure safe operation.

Symbols and messages in the instrument panel

If one or more of the turn signals or brake lights on the trailer is not working, a symbol and message will be displayed in the instrument panel. The other lights on the trailer must be checked manually by the driver before the vehicle is driven.

Symbol	Message
	 Trailer turn indicator Right turn indicator malfunction Trailer turn indicator Left turn indicator malfunction
(C)	Trailer brake light Malfunction

If any of the trailer's turn signal lights is not working, the turn signal symbol in the instrument panel will also flash more quickly than normal.

* Option/accessory.

18.4. Engine compartment

18.4.1. Refilling washer fluid

Washer fluid is used to keep the headlights, windshield and rear window clean. Washer fluid containing antifreeze should be used in very cold weather (below-freezing temperatures).

Fill washer fluid into the reservoir with the blue cover. The reservoir is used for the windshield washer, tailgate window washer and headlight washer*.

(i) Note

When there is approximately 1 liter (1 qt) of washer fluid remaining, the message **Washer fluid Level low, refill** and the symbol will be displayed in the instrument panel.

Recommended grade: Washer fluid recommended by Volvo, with frost protection during cold weather and temperatures below the freezing point.

() Important

Use Volvo's original washer fluid or an equivalent fluid with the recommended pH value between 6 and 8, diluted as recommended, e.g. in a 1:1 solution with pH-neutral water.

(!) Important

Use washer fluid with anti-freeze when temperatures are below the freezing point to help keep the pump, reservoir and hoses from freezing.

Volume:

- Vehicles **with** headlight washing: 5.5 liters (5.8 qts).
- Vehicles without headlight washing: 3.5 liters (3.7 qts).
- * Option/accessory.

18.4.2. Brake fluid specifications

The medium in the hydraulic brake system is called brake fluid and is used to transfer pressure from e.g. a brake pedal via a master brake cylinder, which in turn actuates the brake calipers.

Recommended grade: Volvo Original or similar fluid that meets a combination of Dot 4, 5.1 and ISO 4925 class 6.

(i) Note

Changing or filling brake fluid should be entrusted to an authorized Volvo workshop.

18.4.3. Opening and closing the hood

To open the hood, pull the lever in the passenger compartment and then turn the handle under the front edge of the hood. It is important to follow the instructions for closing and check to make sure the hood is closed completely if it has been open.

Opening the hood

Pull the lever to the side of the pedals to release the hood from its fully closed position.

Nove the handle under the hood upwards to release the catch and lift the hood.

Warning - hood not closed

An open hood is indicated by a warning symbol and graphic in the instrument panel as well as by an audible signal.

(i) Note

If the vehicle indicates that the hood is open even though it is completely closed, open the hood and follow the instructions for closing it. Consult a workshop if the problem persists – an authorized Volvo workshop is recommended.

Closing the hood

√ Warning

To help prevent injury, make sure that there is nothing in the closing path of the hood.

- 1 Lower the hood.
- 2 When the hood reaches the catch at the handle in the front edge of the vehicle, press down on the hood to close it completely.
- > It must audibly lock into place on both sides.
- 3 Make sure the hood locks securely into place without any gaps.

/ Warning

Never drive with the hood open.

Check carefully to ensure that the hood closes completely after it has been open.

If the vehicle warns or indicates that the hood is open, or if anything indicates that it is not completely closed, stop immediately and close it properly.

18.4.4. Engine compartment overview

There are several service-related parts in the engine compartment.

Some of the components included in the vehicle's electric drive system are located in the engine compartment. Exercise caution when accessing the engine compartment and only touch what is required for normal maintenance.

· Warning

Orange wiring may only be handled by qualified personnel.

/! Warning

A number of electrical components in Twin Engine Plug-in Hybrid vehicles use high-voltage current and can be extremely dangerous if handled incorrectly.

- Do not touch anything that is not clearly described in this Owner's Manual.
- Be careful when checking/filling fluids in the engine compartment.

The layout of the engine compartment may vary depending on model and engine variant.

- 1 Coolant expansion tank
- **2** Washer fluid filler pipe
- **3** Brake fluid reservoir (located on the driver's side)
- 4 Fusebox
- 5 Air filter
- 6 Engine oil filler pipe

Location of warning decal for the engine compartment. The layout of the engine compartment may vary depending on model and engine variant.

(i) Note

The decals shown in the Owner's Manual do not claim to be exact reproductions of those found in the vehicle. The purpose is to show approximately how they look and about where they are located on the vehicle. The information that applies for your vehicle in particular is found on the decal on the vehicle.

/! Warning

Bear in mind that the cooling fan (located at the front of the engine compartment behind the radiator) may start or continue running automatically up to about 6 minutes after the engine is turned off.

Always entrust engine washing to a workshop – an authorized Volvo workshop is recommended. If the engine is hot, there is a risk of fire.

/! Warning

The ignition system works with extremely high and dangerous voltages. The vehicle electrical system should always be in ignition mode 0 when work in being performed in the engine compartment.

Do not touch any spark plugs or ignition coils when the vehicle electrical system is in ignition mode II or when the engine is warm.

18.4.5. Coolant

Coolant helps keep the combustion engine at the right operating temperature. Excess heat can be used to heat the passenger compartment.

Recommended grade:

Premixed coolant approved by Volvo.

If concentrated coolant is used, mix with 50% clean water. The purity level must meet Volvo's requirements. Consult a Volvo retailer if you have any questions.

To help prevent deterioration of the cooling system's function, which can lead to engine trouble and other issues, Volvo recommends using only Volvo-approved coolant.

·\ Warning

Never ingest coolant. It can damage kidneys and other organs. The product contains ethylene glycol, inhibitor, water, etc.

18.4.6. Refilling coolant

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note. 953 / 1010 When refilling coolant, follow the instructions on the package. Never fill the cooling system with only water. The risk of freezing is increased with too low or too high amounts of coolant.

If there is coolant under the vehicle, smoke from the cooling system, or if more than 2 liters (about 2 quarts) of coolant has been added to the system, there could be something wrong with the cooling system and starting the vehicle could damage the engine. Call a tow truck and do not attempt to start the engine.

/ Warning

The coolant can be very hot when the engine has been running. Always let the coolant cool off before unscrewing the cap to refill.

When refilling - carefully unscrew the cap to release any excess pressure.

Coolant expansion tank

1 Unscrew the expansion tank cap and fill coolant as needed. The level should be between the MIN and MAX marks on the expansion tank.

() Important

- Coolant is harmful if swallowed and may cause damage to organs.
- Only use coolant of a grade approved by Volvo. If concentrated coolant is used, make sure that the coolant mixture is 50% coolant and 50% water of acceptable quality.
- Hard water and water with high levels of chlorine, chlorides and other salts or contaminants may cause corrosion in the cooling system.
- Do not mix different types of coolant.
- When replacing larger components in the cooling system, always replace all coolant with new coolant.
- Only operate the engine when the cooling system is filled to the correct level. A too-low coolant level can lead to overheating and engine damage.

18.4.7. Engine oil

Only use engine oil of the prescribed grade. This is a requirement for the recommended service intervals and warranties to apply.

Location of warning decal for the engine compartment. The layout of the engine compartment may vary depending on model and engine variant.

Volvo recommends:

If the engine oil is not checked regularly and the level becomes low, this could cause serious engine damage.

(i) Note

The decals shown in the Owner's Manual do not claim to be exact reproductions of those found in the vehicle. The purpose is to show approximately how they look and about where they are located on the vehicle. The information that applies for your vehicle in particular is found on the decal on the vehicle.

(!) Important

To satisfy the requirements for the engine's service intervals, all engines are factory-filled with a specially adapted synthetic engine oil. Great care has been put into the choice of oil, with consideration given to service life, startability, fuel consumption and environmental impact.

For the recommended service intervals to apply, an approved engine oil must be used. Only use the prescribed oil grade to top off or change the oil. Otherwise, there is a risk of the vehicle's service life, startability, fuel consumption and environmental impact being affected.

Failure to use engine oil of the prescribed grade and viscosity could cause damage to engine-related components. Volvo disclaims warranty liability for such type of damage.

Volvo recommends entrusting oil changes to an authorized Volvo workshop.

Symbols for low oil level

Volvo uses different systems to alert the driver of oil level or low oil pressure. Low oil pressure is indicated by a warning symbol in the instrument panel. Warnings or information about the vehicle's oil level can be indicated by the warning symbol in the instrument panel and messages. Contact a Volvo retailer for more information.

Change the engine oil and oil filter according to the schedule specified in the Warranty and Service Records Information booklet.

18.4.8. Checking and filling engine oil

The oil level is measured electronically and is shown in the center display.

Viewing oil level in the center display

Example of oil level display.

The oil level can only be shown when the vehicle is started. The oil level should be checked regularly.

1 Open the Car Status app from App view in the center display.

(i) Note

The system cannot directly detect changes when the oil is filled or drained. The vehicle must have been driven approximately 30 km (20 miles) and have been stationary 5 minutes on a level surface and with the engine off before the correct oil level will be displayed.

If the conditions for measuring oil level are not properly fulfilled (time after engine shutdown, vehicle inclination, ambient temperature, etc.) the message **No value available** will be shown in the center display. This does **not** mean that anything is wrong in the vehicle systems.

! Important

If this symbol is shown, the oil pressure may be too low. Stop the vehicle as soon as possible and have it towed to a workshop – an authorized Volvo workshop is recommended.

Filling engine oil

Filler pipe^[1],^[2]

It may be necessary to top up engine oil between regularly scheduled services. No action is necessary with regard to engine oil level until a message appears in the instrument panel.

/ Warning

If the message **Engine oil level Service required** is displayed, drive to a workshop – an authorized Volvo workshop is recommended. The oil level may be too high.

✓ Warning

Do not spill oil on the hot exhaust pipes as this could cause a fire.

(!) Important

If a message appears to fill engine oil, add only the specified amount. A too-high level can lead to malfunction.

- ^[1] Engines with an electronic oil level sensor do not have a dipstick.
- ^[2] The layout of the engine compartment may vary depending on model and engine variant.

18.4.9. Engine oil specifications

Engine oil of type VCC RBS0-2AE0W-20 must be used^[1]. Lower oil grades may not offer the same fuel economy, engine performance or engine protection.

Volvo recommends:

General

See the Service and warranty booklet for information about oil change intervals.

Do not use oil additives.

Oil viscosity

The wrong oil viscosity can shorten engine service life during normal use. VCC RBS0-2AE0W-20 provides good fuel economy and engine protection. See the viscosity chart.

Viscosity chart

Oil volume

Engine oil volumes (including oil filter) are shown in the table.

^[1] 0W-30 or 5W-30ACEA A5/B5 engine oil can also be used if VCC RBS0 2AE0W-20 oil is not available.

18.4.10. Fuses in the engine compartment

The fuses in the engine compartment help protect electrical components such as engine and brake functions.

There are spaces for several extra fuses in the fuse box.

Positions

The location of the fuses is shown on the inside of the cover. Functions and components in the fuse table cover several different models and engine variants. Therefore, a described fuse may apply to fewer components than those in the table, or be missing completely, depending on how the vehicle is equipped.

If a position has several values in the table, the value depends on variations in equipment level. If this is the case, follow the value on the replaced fuse. In the event of uncertainty, contact a workshop. An authorized Volvo workshop is recommended.

* Option/accessory.

^[1] This type of fuse should be replaced by a workshop. An authorized Volvo workshop is recommended.

18.5. Tools and accessories

18.5.1. Jack*

The jack can be used to lift the vehicle to e.g. change a wheel.

() Important

The jack* provided with your vehicle is intended to be used only in temporary situations such as changing wheels in the event of a flat tire. Only the jack that came with your particular model should be used to lift the vehicle. If the vehicle needs to be lifted more frequently or for a prolonged period, using a garage jack or hoist is recommended. Always follow this device's instructions for use.

When not in use, the jack should be kept in its storage compartment under the cargo compartment floor. The jack needs to be cranked together to the correct position in order to fit.

* Option/accessory.

18.5.2. Tire sealing system

The temporary tire sealing system^[1] (TMK) can be used to seal a puncture hole in a tire or to check and adjust the inflation pressure in the tire.

Models equipped with a spare wheel^[2] do not have the tire sealing system.

California Proposition 65

Operating, servicing and maintaining a passenger vehicle can expose you to chemicals including engine exhaust, carbon monoxide, phthalates, and lead, which are known to the State of California to cause cancer and birth defects or other reproductive harm. To minimize exposure, avoid breathing exhaust, do not idle the engine except as necessary, service your vehicle in a well ventilated area and wear gloves or wash your hands frequently when servicing your vehicle. For more information go to www.P65Warnings.ca.gov/passenger-vehicle [https://www.p65warnings.ca.gov/products/passenger-vehicle [https://www.p65warnings.ca.gov/products/passenger-vehicle [https://www.p65warnings.ca.gov/products/passenger-vehicle].

The tire sealing system consists of a compressor and a bottle containing sealing compound. The sealing functions as a temporary repair.

The sealing compound effectively seals tires with punctures in the tread but may not be able to fully seal tires with punctures in the sidewall. Do not use the tire sealing system on tires with large tears, cracks or similar damage.

(i) Note

The compressor is intended for temporary tire sealing and is approved by Volvo.

Location

The tire sealing system is located in a foam block under the cargo compartment floor.

Sealing compound expiration date

The sealing compound bottle must be replaced if its expiration date has passed (see the decal on the bottle). Handle the old bottle as hazardous waste.

- ^[1] Certain models only.
- ^[2] Not available on all models.

18.5.3. Tool kit

Tools for e.g. towing or changing wheels are provided in the vehicle's cargo compartment.

If the vehicle is equipped with a spare tire * ^[1], a jack and wheel bolt key are provided instead of the tire sealing system.

- * Option/accessory.
- ^[1] Not available on all models.

18.6. Fuses

18.6.1. Fuses and fuseboxes

Electrical functions and components are protected by a number of fuses in order to protect the vehicle's electrical system from damage by short circuiting or overloading.

/ Warning

Never replace a fuse with a foreign object or a fuse with higher amperage. This could damage the electrical system and lead to fire.

Contact an authorized Volvo workshop for assistance replacing fuses not described in the Owner's Manual.

✓ Warning

Orange wiring may only be handled by qualified personnel.

✓ Warning

A number of electrical components in Twin Engine Plug-in Hybrid vehicles use high-voltage current and can be extremely dangerous if handled incorrectly.

Do not touch anything that is not clearly described in the vehicle's Owner's Manual.

If any electrical component or function is not responding, the component may have blown a fuse due to overload. If the same fuse blows repeatedly, there may be a problem with the component. Volvo recommends contacting an authorized Volvo work-shop to have the component checked.

Location of fuseboxes

18.6.2. Replacing fuses

An overloaded fuse needs to be replaced to restore function to the electrical component it protects.

- 1 Locate the correct fuse in the fuse diagrams for the different fuse boxes.
- 2 Pull out the fuse and examine it from the side to determine if the curved metal wire in the fuse is intact.
- 3 If the wire is broken, replace the fuse with a new fuse of the same color and amperage.

(i) Note

Some fuse boxes contain special pliers to make it easier to grip the fuse.

✓ Warning

Never replace a fuse with a foreign object or a fuse with higher amperage. This could damage the electrical system and lead to fire.

Contact an authorized Volvo workshop for assistance replacing fuses not described in the Owner's Manual.

18.6.3. Fuses under the left front seat

Fuses under the left front seat provide protection for e.g. electrical outlets, displays and door modules.

There are spaces for several extra fuses in the distribution box in the engine compartment.

Positions

The location of the fuses is shown on the inside of the cover. Functions and components in the fuse table cover several different models and engine variants. Therefore, a described fuse may apply to fewer components than those in the table, or be missing completely, depending on how the vehicle is equipped.

If a position has several values in the table, the value depends on variations in equipment level. If this is the case, follow the value on the replaced fuse. In the event of uncertainty, contact a workshop. An authorized Volvo workshop is recommended.

^[1] This type of fuse should be replaced by a workshop. An authorized Volvo workshop is recommended.

18.7. Battery

18.7.1. Replacing the key's battery

The battery in the key can be replaced when it is discharged. Battery life depends on how much the key is used. The battery for the buttonless key (Key Tag)* cannot be replaced.

When the information icon illuminates and the message Vehicle key bat. low appears in the instrument panel, the key's battery needs to be replaced.

Reduced key range is another sign that the battery level is low.

The battery in the smaller key without buttons (the Key Tag)* cannot be replaced. A new key can be ordered from an authorized Volvo workshop.

(!) Important

Hand in used Key Tags to an authorized Volvo workshop, where the key can be deleted from the vehicle's system. The key can still be used even if the battery is discharged to start the vehicle via a back-up start.

Opening the key and replacing its battery

(!) Important

Do not touch the contact surfaces of new batteries. This impairs the battery's function.

Hold the key with the front side (with the Volvo logo) facing up, and the key ring bracket facing you.

There should be a catch to the left of the key ring bracket. If this catch is on the wrong side, the front and back sides have been switched during a previous battery change.

Move the catch next to the key ring bracket to the side and slide the front cover away from the bracket.

The cover comes loose and can be lifted off.
 There is an additional catch under the front cover for removing the back cover.

Move the catch behind the front cover to the side and slide the rear cover away from the key ring bracket.

The cover comes loose and can be lifted off.
 Under the rear cover is a battery cover.

Turn the battery cover counterclockwise to the OPEN position. Use a screwdriver, coin or similar.

Remove the battery cover. If it is difficult to remove, use a narrow object to carefully pry it up.

The battery's positive side (+) faces upward. Remove the battery by pressing its edge and then lifting it out.

Insert a new battery with the positive side (+) facing upward. Do not touch the contact surfaces of the key battery.

Place the edge of the battery under the two lower plastic catches.

Then push the battery down so that it is held in place by the upper plastic catch.

(i) Note

Use batteries with the designation CR2032, 3 V.

(i) Note

Volvo recommends that replacement batteries for the key meet the UN Manual of Test and Criteria, Part III, subsection 38.3. The supplied batteries or batteries replaced by an authorized Volvo workshop meet the same criteria.

6

6

Put the battery cover back into place and turn it clockwise to the CLOSE position.

Put the back cover on in the reverse order it was removed. The back cover does not have a logo. Press the cover down until it clicks and then push it the last few millimeters back to its original position.

> A second click indicates that the cover is correctly positioned and locked into place. There should not be any gaps.

Turn the key and put the front cover back on in the same way as the back cover.

Warning

7

8

7

Make sure the battery is positioned correctly with the right polarity. If the key will not be used for a prolonged period of time, remove the battery to avoid battery leakage and damage. Wear protective gloves when handling damaged batteries, as batteries that are damaged or leaking can cause corrosive damage in contact with the skin.

- Keep batteries out of the reach of children.
- Do not leave batteries lying out where they could be swallowed by children or pets.
- Never disassemble, short-circuit or place a battery into open fire.
- Do not charge non-chargeable batteries. They could explode.
- Check products with batteries regularly for signs of damage.

Do not use the key if there is anything to suggest that the key or its battery has been damaged or is beginning to leak. Keep defective products out of the reach of children.

(!)Important

Batteries must be recycled in an environmentally sound manner at the end of their service life.

/ Warning

California Proposition 65

Operating, servicing and maintaining a passenger vehicle can expose you to chemicals including engine exhaust, carbon monoxide, phthalates, and lead, which are known to the State of California to cause cancer and birth defects or other reproductive harm. To minimize exposure, avoid breathing exhaust, do not idle the engine except as necessary, service your vehicle in a well ventilated area and wear gloves or wash your hands frequently when servicing your vehicle. For more information go to www.P65Warnings.ca.gov/passenger-vehicle [https://www.p65warnings.ca.gov/products/passenger-vehicle [https://www.p65warnings.ca.gov/products/passenger-vehicle [https://www.p65warnings.ca.gov/products/passenger-vehicle].

* Option/accessory.

18.7.2. Battery drain

Using a lot of electrical current without allowing the vehicle to charge the start battery results in a low battery level and some electrical functions will be reduced or switched off. If the battery level drops below a certain level, it will not be possible to start the vehicle without jump-starting or charging with an external charger.

Several measures can be taken to reduce power consumption. Avoid using ignition mode || when the engine is switched off. Instead, use ignition mode |, which uses less electrical current. Do not use functions that use a lot of electrical current when the vehicle is not being driven. Examples of such functions are:

- blower
- headlights
- windshield wipers
- audio system
- accessories plugged into the vehicle.

If the battery level is low, a message is shown in the instrument panel. The vehicle's energy-saving function will then turn off or reduce certain functions, such as the blower and the audio system.

1 To charge the battery, start the engine and let it run for at least 15 minutes (driving charges the battery faster than letting the engine idle).

If the battery level is still low after taking these measures, the vehicle should be checked by a workshop – an authorized Volvo workshop is recommended.

(i) Note

High electrical current consumption may cause the battery level to become low, which will temporarily limit the Start/Stop function. The engine will then start automatically without the driver lifting their foot from the brake pedal.

18.7.3. Jump starting using another battery

If the vehicle's start battery(12 V) is discharged, current from another battery can be used to start the vehicle's electrical system.

If the 12 V battery (start battery) is discharged, the vehicle's electrical system can be jump-started from another vehicle's battery using jumper cables. If the hybrid battery is also discharged, it must be charged using the charging cable after the electrical system is started so that the engine can be started.

Jumper cable charging points. There are two connecting points under the cover. Only use the one closest to the passenger compartment.

(!) Important

The charging points of the vehicle are only intended for jump-starting the vehicle in question. Do not use them to start other vehicles – the charging circuit's fuse could be overloaded and stop working.

If a fuse has become overloaded, **12 V Battery Fuse failure Service required** will be displayed in the instrument panel. Volvo recommends contacting an authorized Volvo workshop.

To avoid short circuits or other damage, the following steps are recommended when jump starting the battery:

- **1** Put the ignition in mode 0.
- 2 Make sure that the assisting battery has a voltage of 12 V.
- **3** If the battery is in another vehicle, turn off that vehicle's engine and make sure that the vehicles are not touching each other.

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note.

4 Clamp one end of the red jumper cable to the assisting battery's positive terminal (1).

() Important

Connect the jumper cable carefully to prevent short circuit and contact with other components in the engine compartment.

5 Fold back the cover over your vehicle's positive charging point (2).

There are two connecting points under the cover. Only use the connecting point closest to the passenger compartment.

- 6 Clamp the other end of the red jumper cable to your vehicle's positive charging point (2).
- 7 Clamp one end of the black jumper cable to the assisting battery's negative terminal (3).
- 8 Clamp the other end of the black jumper cable to your vehicle's negative charging point (4).
- **9** Make sure the jumper cables are securely attached to help prevent sparks while jump starting.
- **10** Start the engine of the assisting vehicle and let it run for a few minutes at a higher idling speed than normal, about 1500 rpm.
- **11** To activate the vehicle's electrical system, press and hold the start button for at least 5 seconds without pressing the brake.

(i) Note

During normal start conditions, the vehicle's electric motor will be prioritized and the gasoline engine will remain off. This means that after the start button has been pushed in, the electric motor has "started" and the vehicle is ready to be driven. Start of the electric motor is indicated by the indicator lights on the instrument panel going out and its preselected theme illuminating.

(!) Important

Do not touch the connections between the cable and the vehicle during the start attempt. Risk of sparking.

- 12 Wait at least two minutes to charge the start battery and then try to start the engine again.
- 13 If the engine still doesn't start, repeat steps 11 and 12.
- 14 Remove the jumper cables in the reverse order first the black cables and then the red cables.

Make sure that none of the clamps of the black jumper cables come into contact with the vehicle's positive charging point, the assisting vehicle's battery's positive terminal, or either of the red jumper cable's connected clamps.

/ Warning

PROPOSITION 65 WARNING! Battery posts, terminals, and related accessories contain lead and lead compounds, chemicals known to the state of California to cause cancer and reproductive harm. Wash hands after handling.

/ Warning

- Batteries generate hydrogen gas, which is flammable and explosive.
- Do not connect the jumper cable to any part of the fuel system or to any moving parts. Avoid touching hot manifolds.
- Battery fluid contains sulfuric acid. Do not allow battery fluid to contact eyes, skin, fabrics or painted surfaces.
- If contact occurs, flush the affected area immediately with water. Obtain medical help immediately if eyes are affected.
- Never expose the battery to open flame or electric spark. Do not smoke near the battery. Failure to follow the instructions for jump starting can lead to injury.

(i) Note

The vehicle cannot be started if the hybrid battery is discharged.

18.7.4. Batteries and power supply

The vehicle's own power is supplied by different batteries and components. These enable the vehicle's electric functions.

The vehicle's primary electrical system operates with 12 V voltage and powers electrical equipment.

In addition to the primary electrical system, the vehicle has a high-voltage system for electrical propulsion.

/ Warning

A number of electrical components in the vehicle use high-voltage current and can be extremely dangerous if handled incorrectly. Do not touch anything that is not clearly described in this Owner's Manual.

Batteries

To supply power to various components, your vehicle is equipped with:

- a 12 V start battery that powers the vehicle's primary electrical system
- a hybrid battery for electrical propulsion of the vehicle.

18.7.5. Recycling of batteries

Batteries must be recycled in an environmentally sound manner at the end of their service life.

Consult a workshop if you are uncertain of how to dispose of this type of waste – an authorized Volvo workshop is recommended. Only authorized workshop personnel may handle hybrid batteries.

18.7.6. Battery symbols

There are warning symbols and information on the batteries.

	Wear protective goggles.
	See the Owner's Manual for additional information.
	Keep batteries away from children.
	Batteries contain corrosive acid.
	Avoid smoking, open flames, and/or sparks.
	Risk of explosion.
X	Recycle properly.

18.7.7. Hybrid battery

The hybrid battery powers the vehicle's electric motor and is charged via the vehicle's charging socket.

The vehicle cannot be started if the hybrid battery is discharged.

If both the starter battery and the hybrid battery are discharged, both batteries must be charged. In this situation, it is not possible to first charge only the hybrid battery. The starter battery must have a certain charge level in order for the hybrid battery to be charged.

/!\ Warning

Hybrid battery replacement may only be performed by a workshop – an authorized Volvo workshop is recommended.

Hybrid battery service life and capacity

The capacity of the hybrid battery decreases with age and use, which could result in increased use of the combustion engine and thereby higher fuel consumption and reduced electric motor range.

Coolant

The hybrid battery's cooling system has its own expansion tank.

(!) Important

Filling the hybrid battery coolant should only be performed by a workshop - an authorized Volvo workshop is recommended.

Specifications for hybrid battery

Type: Lithium-ion

Power reserve: 10.7 kWh

18.7.8. Start battery

The start battery powers the vehicle's primary electrical system, which includes most of the electrical equipment. The hybrid battery is used to start the combustion engine.

The start battery is a 12 V battery that is dimensioned to power the vehicle's specific electrical systems and functions.

984 / 1010

Never disconnect the start battery while the engine is running.

Make sure the cables to the start battery are correctly connected and the clamps are securely tightened.

(!) Important

On certain models, the battery is secured with a tensioning strap. Make sure that the tensioning strap is always securely tightened.

() Important

If replacing the battery, make sure you replace it with a battery of the same size, cold start capacity and type as the original battery (see the decal on the battery). Volvo recommends having an authorized Volvo workshop change batteries.

/ Warning

If the starter battery is disconnected, the function for automatic opening and closing must be reset to function correctly. A reset is required in order for the pinch protection to work.

/ Warning

- Batteries generate hydrogen gas, which is flammable and explosive.
- Do not connect the jumper cable to any part of the fuel system or to any moving parts. Avoid touching hot manifolds.
- Battery fluid contains sulfuric acid. Do not allow battery fluid to contact eyes, skin, fabrics or painted surfaces.
- If contact occurs, flush the affected area immediately with water. Obtain medical help immediately if eyes are affected.
- Never expose the battery to open flame or electric spark. Do not smoke near the battery. Failure to follow the instructions for jump starting can lead to injury.

Starter battery service life and capacity

The service life of the start battery is influenced by a number of factors, including the number of starts, discharges, driving style, driving conditions and climate conditions. The battery's starting capacity decreases over time. Severe cold further limits starting capacity.

The battery level can become low if the vehicle is not used for a prolonged period of time or if it is only driven short distances.

To keep the start battery in good condition, drive the vehicle at least 15 minutes a week or connect the battery to a battery charger with automatic maintenance charging. A starter battery that is always kept fully charged has the maximum service life.

Location

The start battery is located in the cargo compartment.

Specifications for start battery

Battery type	H7AGM
Voltage (V)	12
Cold start capacity $^{[1]}$ - CCA $^{[2]}$ (A)	800
Dimensions, L×W×H	315×175×190 mm (12.4×6.9×7.5 inches)
Capacity (Ah)	80

^[1] According to EN standard.

^[2] Cold Cranking Amperes.

18.8. Service

18.8.1. Climate control system service

Service and repairs on the air conditioning system should only be done by an authorized workshop.

Troubleshooting and repairs

The air conditioning system contains a fluorescent tracer substance. Ultraviolet light is used to search for leaks.

Volvo recommends contacting an authorized Volvo workshop.

The climate system in the vehicle uses a freon-free R1234yf refrigerant. For information regarding the refrigerant, refer to the decal located on the inside of the frunk.

/ Warning

The air conditioning system contains the refrigerant R1234yf under pressure. In accordance with SAE J2845 (Technician Training for Safe Service and Containment of Refrigerants Used in Mobile A/C System), service and repairs to the refrigerant system may only be performed by trained and certified technicians in order to ensure the safety of the system.

18.8.2. Volvo's service program

To keep the vehicle as safe and reliable as possible, follow the Volvo service schedule specified in the Warranty and Maintenance Records Information booklet.

/! Warning

California Proposition 65

Operating, servicing and maintaining a passenger vehicle can expose you to chemicals including engine exhaust, carbon monoxide, phthalates, and lead, which are known to the State of California to cause cancer and birth defects or other reproductive harm. To minimize exposure, avoid breathing exhaust, do not idle the engine except as necessary, service your vehicle in a well ventilated area and wear gloves or wash your hands frequently when servicing your vehicle. For more information go to www.P65Warnings.ca.gov/passenger-vehicle [https://www.p65warnings.ca.gov/products/passenger-vehicle [https://www.p65warnings.ca.gov/products/passenger-vehicle [https://www.p65warnings.ca.gov/products/passenger-vehicle].

Volvo recommends having an authorized Volvo workshop perform service and maintenance. Volvo workshops have the staff, service literature and special tools that can provide the highest quality of service.

$(\ ! \)$ Important

To ensure the Volvo warranty is not invalidated, check and follow the Warranty and Service Records Information booklet.

Service and repairs

Service the vehicle regularly. Follow Volvo's recommended service intervals.

Detailed inspection and repairs may only be performed by an authorized workshop.

/! Warning

Do not make any repairs on this vehicle yourself. Electrical cables and/or components that have come loose may only be corrected by an authorized workshop – an authorized Volvo workshop is recommended.

Introduction

The maintenance services contain several checks that require special instruments and tools and therefore must be performed by a qualified technician. To keep your Volvo in top condition, specify time-tested and proven Genuine Volvo Parts and Accessories.

The Federal Clean Air Act - U.S.

The Federal Clean Air Act requires vehicle manufacturers to furnish written instructions to the ultimate purchaser to assure the proper servicing and function of the components that control emissions. These services, which are listed in the "Warranty and Service Records Information" booklet, are not covered by the warranty. You will be required to pay for labor and material used.

Maintenance

Your Volvo passed several major inspections before it was delivered to you, in accordance with Volvo specifications. The maintenance procedures outlined in the Warranty and Service Records Information booklet, many of which will positively affect your vehicle's emissions, should be performed as indicated. It is recommended that receipts for vehicle emission maintenance be retained in case questions arise concerning maintenance. Inspection and maintenance should also be performed anytime a malfunction is observed or suspected.

Applicable warranties - U.S./Canada

In accordance with applicable U.S. and Canadian regulations, the following list of warranties is provided.

- New Vehicle Limited Warranty
- Parts and Accessories Limited Warranty
- Corrosion Protection Limited Warranty
- Seat Belt and Supplemental Restraint Systems Limited Warranty
- Emission Design and Defect Warranty
- Emission Performance Warranty

These are federal warranties; other warranties are provided as required by state/provincial law. Refer to your separate Warranty and Service Records Information booklet for detailed information concerning each of the warranties.

Periodic maintenance helps minimize emissions

(i) Note

- Refer to your Service and Warranty Booklet for a comprehensive service and maintenance schedule up to 240,000 km (150,000 miles). This program contains inspections and services necessary for the proper function of your vehicle and includes components that affect vehicle emissions.
- The Warranty and Service Records Information booklet also contains detailed information concerning the warranties that apply to your vehicle.

On-board Diagnostic System

OBD II is part of your vehicle's computerized engine management system. It stores diagnostic information about your vehicle's emission controls. It can light the Check Engine light (MIL) if it detects an emission control "fault." A "fault" is a component or system that is not performing within an expected range. A fault may be permanent or temporary. OBD II will store a message about any fault.

Emission inspection readiness

How do states use OBD II for emission inspections?

Many states connect a computer directly to a vehicle's OBD II system. The inspector can then read "faults." In some states, this type of inspection has replaced the tailpipe emission test.

How can my vehicle fail OBD II emission inspection?

Your vehicle can fail OBD II emission inspection for any of the following reasons:

- If your Check Engine (MIL) light is lit, your vehicle may fail inspection.
- If your vehicle's Check Engine light was lit, but went out without any action on your part, OBD II will still have a recorded fault. Your vehicle may pass or fail, depending on the inspection practices in your area.
- If you had recent service that required disconnecting the battery, OBD II diagnostic information may be incomplete and "not ready" for inspection. A vehicle that is not ready may fail inspection.

How can I prepare for my next OBD II emission inspection?

- If your Check Engine (MIL) light is lit or was lit but went out without service, have your vehicle diagnosed and, if necessary, serviced by a qualified Volvo technician.
- If you recently had service for a lit Check Engine light, or if you had service that required disconnecting the battery, a period
 of driving is necessary to bring the OBD II system to "ready" for inspection. Two half-hour trips of mixed stop-andgo/highway driving are typically needed to allow OBD II to reach readiness. Your Volvo retailer can provide you with more
 information on planning a trip.
- Maintain your vehicle in accordance with your vehicle's maintenance schedule.

Owner maintenance

Periodic maintenance requirements and intervals are described in your vehicle's Warranty and Service Records Information booklet.

The following points can be carried out between the normally scheduled maintenance services.

Each time the vehicle is refueled:

- Check the engine oil level.
- Clean the windshield, windshield wipers, headlights, and taillights.

Monthly:

- Check cold tire pressure in all tires. Inspect the tires for wear.
- Check that engine coolant and other fluid levels are between the indicated "min" and "max" markings.
- Clean interior glass surfaces with a glass cleaner and soft paper towels.
- Wipe driver information displays with a soft cloth.
- Visually inspect battery terminals for corrosion. Corrosion may indicate a loose terminal connector, or a battery near the end of its useful service life. Consult your Volvo retailer for additional information.

As needed:

Wash the vehicle, including the undercarriage, to reduce wear that can be caused by a buildup of dirt, and corrosion that can be caused by salt residues.

Clean leaves and twigs from air intake vents at the base of the windshield, and from other places where they may collect.

(i) Note

Complete service information for qualified technicians is available online for purchase or subscription at <u>www.volvotechinfo.com</u>.

18.9. Vehicle status

18.9.1. Vehicle status

Information on the general status of the vehicle can be viewed in the center display.

Car Status opens in the center display's App view. The following tabs will be shown:

- Messages status messages
- Status checking engine oil level and AdBlue level^[1]
- TPMS tire inflation pressure check
- Appointments vehicle information^[2]

^[1] AdBlue Diesel models only.

^[2] Certain markets only.

18.9.2. Sending vehicle information to the workshop

Vehicle-related information can be sent at any time from the vehicle^[1], e.g. if you schedule a visit to a workshop and would like to assist your workshop by providing additional basic information. Sending vehicle information is not the same as scheduling service.

- 1 Open the Car Status app from App view in the center display.
- 2 Tap Appointments.
- 3 Tap Send vehicle data.

A message confirming that vehicle-related information has been sent will appear at the top of the center display. You can cancel data transmission by tapping the checkbox in the activity indicator. Information is sent via the vehicle's Internet connection^[2].

Vehicle information can be accessed by any retailer if they are provided with your vehicle identification number (VIN^[3]).

Vehicle information contents

The most recently saved vehicle-related information will be sent (the last time the vehicle was turned on). This includes information regarding:

- service requirements
- time since last service was performed
- function status
- fluid levels
- mileage (odometer reading)
- Vehicle Identification Number (VIN^[3])
- software version
- diagnostic information.
- ^[1] Certain markets only.
- ^[2] There may be a charge for transmitting data over the Internet, depending on your service plan.
- ^[3] Vehicle Identification Number.

18.10. Download Center

18.10.1. Download Center

The Download Center app in the vehicle's center display is used to manage software^[1] such as apps and maps.

Download Center is started from App view in the center display and makes it possible to:

- search for and update certain software
- update Sensus Navigation * map data
- download, update and delete apps.

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note.

^[1] There may be a charge for transmitting data over the Internet, depending on your service plan.

* Option/accessory.

18.10.2. Updating software via Download Center

Certain software, e.g. apps and maps, can be updated via Download Center if the vehicle is connected to the Internet^[1].

The message **New software updates available See Download Center** is shown in the center display's status bar when there is a new software update.

Searching for updates

- 1 Go to Download Center in the center display's App view.
- A search begins. If a search has already been performed since startup, the system will need to be restarted before a new search can be performed. If an installation is already in progress, no search is performed. Select software area to see available updates.

Starting updates

- **1** Select one of the installation options in Download Center's list of available updates.
- The selected software begins downloading.
 During the download phase, the update can be canceled by tapping the X next to the selected software. Once the download is finished and the installation has started, it will no longer be possible to cancel the update.

(i) Note

The speed of other connected services may be affected during the download. The download can be canceled and started again at a later time, or the update can be prioritized by switching off other connected services, such as Internet radio.

If the ignition is switched off and the vehicle is exited, the update will resume the next time the vehicle is used.

^[1] There may be a charge for transmitting data over the Internet, depending on your service plan.

18.10.3. Tips in the event of problems updating via the Download Center

When the vehicle is connected to the Internet^[1], it is possible to update several of the vehicle's systems directly from the center display. Here are some frequently asked questions and answers.

No connection to the service

The message **No connection to service** means that the connection to the service is not working. There may be several reasons for the connection not working. Below are some possible causes and solutions.

Your vehicle has no internet connection

Ensure that your vehicle is connected to the internet by one of the following:

- Wi-Fi
- Bluetooth-connected phones
- Vehicle modem (P-SIM)

Then restart the app by going back to the home view and pressing Download Center.

Connection to the internet works but the service of remote updates is temporarily unavailable

Restart the app by going back to the home view and pressing **Download Center**. A new search is started and the request is sent to the remote updates function. If the error message appears repeatedly for more than 12 hours, the service may be temporarily unavailable or down for maintenance. If the fault persists for more than 48 hours, contact your Volvo retailer or Volvo Cars customer service for further assistance.

The service has been inactive for 12 months

If the **Download Center** service has not been used in 12 months, the service will take longer the next time it is used (approx. 60 seconds). The next time remote updates is started, if the service has been used within 12 months, the service will be faster to start.

The vehicle loses internet connection during updating

The vehicle loses internet connection when updating is in progress, check the internet connection and restart the function.

If an update or download in progress stops responding despite restarting the vehicle

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note. 993 / 1010 If you experience that an update or download in progress stops responding despite having restarted the vehicle, please visit a workshop^[2] to have this rectified.

Installation of too many apps

The space for apps is a maximum of 10 GB. If this space is full, it will not be possible to perform updates from the vehicle. It may become full if you store a lot of music offline, for example. Free up memory by deleting an app, stored offline music, etc.

If the infotainment system restarts by itself during an ongoing installation/update

If the vehicle's infotainment system restarts by itself during an ongoing installation of an app or a system update, try to reinstall the app or system update. If you find that this doesn't help, visit a workshop^[2] for further assistance.

If a map update stops in the message Leave vehicle with engine off to finalize

If you get the message Leave vehicle with engine off to finalize after completing a map update and the message does not disappear after a restart, visit a workshop^[2] for further assistance. If possible, wait 14 days and the message will disappear by itself.

Further assistance

If you have not received a response to your questions and need further assistance, contact your Volvo retailer or Volvo Cars customer service.

(i) Note

An update can be interrupted when the ignition is switched off and the vehicle is left. However, the update does not have to be completed before the vehicle is left as the update is resumed the next time the vehicle is used.

(i) Note

Data downloading can affect other services such as transfer data, e.g. web radio. If the affect on other services is experienced as problematic, the download can be interrupted. Alternatively, it may be appropriate to switch off or cancel other services.

^[1] There may be a charge for transmitting data over the Internet, depending on your service plan.

^[2] An authorized Volvo workshop is recommended.

18.11. Recommended maintenance for the camera and radar units

In order for the camera and radar units to function properly, they must be kept free of dirt, ice, snow, etc. and should be washed regularly with water and car washing detergent.

(i) Note

Dirt, ice and snow covering the sensors could cause false warnings, reduced function, or no function.

The areas that should be kept clean, on both the left and right sides of the vehicle, are marked in the following illustrations.

Location of the parking sensors around the vehicle

Location of front camera and radar sensor

Location of rear radar sensors

- For best possible performance, it is important to keep the areas in front of the sensors clean.
- Do not attach any objects, tape or decals to the surface of the sensors.
- Clean the camera lenses regularly using lukewarm water and car washing detergent. Wash gently to avoid scratching the lens.

(!) Important

Only a workshop may perform maintenance on driver support components – an authorized Volvo workshop is recommended.

18.12. Maintenance of the brake system

Regularly check the brake system components for wear.

To keep the vehicle as safe and reliable as possible, follow the Volvo service schedule specified in the Warranty and Maintenance Records Information booklet. After replacing brake pads and brake discs, braking effect is not adapted until they are "broken in" by driving a few hundred kilometers (miles). Compensate for the reduced braking effect by applying greater pressure to the brake pedal. Volvo recommends only using brake pads approved for your Volvo.

(!) Important

The brake system's components should be regularly checked for wear.

Contact a workshop for advice on how to do this or let a workshop perform the inspection - an authorized Volvo workshop is recommended.

18.13. Data transfer between vehicle and workshop over Wi-Fi

Volvo workshops have a designated Wi-Fi network for data transfer between the vehicle and the workshop. The key buttons are used to connect the vehicle to the Internet, so it is important to bring a key with buttons to workshop visits.

During workshop visits, service technicians perform troubleshooting and update software via the network.

Connecting to the Internet using the key

Pressing the lock button on the key three times will connect the vehicle to the workshop's network. Connection to the Internet is usually performed by the service technician.

When the car is connected to a Wi-Fi network, the 🗢 symbol appears in the center display.

The key cannot be used to connect to other Wi-Fi networks.

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note.

996 / 1010

The vehicle may not be driven when it is connected to the workshop's networks and systems.

18.14. Hoisting the vehicle

When lifting the vehicle using a jack, it is important to use the marked lifting points on the chassis.

Arrows along the lower edges of the sides of the vehicle indicate the location of the jack attachment points/lifting points (shown in red).

(i) Note

Volvo recommends only using the jack intended for your specific vehicle model. If a jack other than that recommended by Volvo is used, follow the instructions included with the equipment.

The vehicle's ordinary jack is only intended to be used in temporary situations for short periods of time, such as when changing wheels in the event of a flat tire. If the vehicle needs to be lifted more frequently, or for a longer period of time than for a wheel change, a garage jack or hoist is recommended. Always follow the instructions for use provided with the equipment.

/ Warning

- Apply the parking brake and put the gear selector in the Park (P) position.
- Block the wheels standing on the ground, use rigid wooden blocks or large stones.
- Check that the jack is not damaged, that the threads are properly lubricated and that it is free from dirt.
- Be sure the jack is on a firm, level, non-slippery surface and that it is upright and not leaning.
- The jack must correctly engage in the jack attachment.
- No objects should be placed between the base of jack and the ground, or between the jack and the attachment bar on the vehicle.
- Never let anyone remain in the vehicle when it is raised on a jack.
- If a tire must be changed near passing traffic, make sure all passengers move to a safe location.
- Use a jack intended for the vehicle when changing a tire. For any other job, use stands to support the vehicle.
- Never crawl under the vehicle and never stretch any part of your body under the vehicle when it is raised using a jack.

/ Warning

If the vehicle is lifted on a garage jack, the jack must be placed under one of the four lifting points. Make sure that the vehicle is correctly positioned on the jack and that it cannot slide off. Make sure the jack plate has a rubber pad to help keep the vehicle stable and prevent damage. Always use axle stands or similar.

When not in use, the jack* should be kept in its storage compartment under the cargo compartment floor.

Read through all instructions before starting. Before raising the vehicle using a jack or lift, take out all the tools you will need.

- 1 Turn on the vehicle's hazard warning flashers if e.g. a wheel change must be performed in an area with traffic.
- 2 Apply the parking brake and put the gear selector in P, or first gear if the vehicle has a manual transmission.
- **3** Place chocks in front of and behind the wheels that are still on the ground. For example, use heavy wooden blocks or large stones.
- **4** Position the jack or garage lift arms at the designated points under the vehicle. Arrows along the lower edges of the sides of the vehicle indicate the location of the jack attachment points/lifting points. There are two jack attachment points on

each side of the vehicle. There is a groove for the jack at each attachment point.

- 5 Position the jack under the attachment point being used, ensuring that the surface is firm, flat and not slippery.
- 6 Crank it up until it is properly aligned and it is in contact with the vehicle's jack attachment point. Make sure the top of the jack (or the garage lift arms) is correctly positioned in the attachment point, with the bump on the top of the jack in the recess in the attachment point and its base positioned vertically under the attachment point.
- 7 Turn the jack so that the crank is as far as possible from the side of the vehicle, which will position the jack's arms perpendicular to the vehicle's direction of movement.
- **8** Raise the vehicle to a suitable height for the operation to be performed.

* Option/accessory.

19.1. Dimensions and weights

19.1.1. Towing capacity and tongue weight

Towing capacity and tongue weight are shown in the table.

! Important

• The maximum trailer weights listed are only applicable for altitudes up to 3280 ft(1,000 m) above sea level. With increasing altitude the engine power and therefore the car's climbing ability are impaired because of the reduced air density, so the maximum trailer weight has to be reduced accordingly. The weight of the car and trailer must be reduced by 10% for every further 3280 ft(1,000 m) (or part thereof).

19.1.2. Dimensions

The vehicle's length, height, etc. are shown in the table.

	Dimensions	mm	inches
А	Ground clearance ^[1]	205	8.1
в	Wheelbase	2702	106.4
С	Length	4425	174.2

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note.

	Dimensions	mm	inches
D	Load length, floor, folded backrest	1670	65.7
E	Load length, floor	887	34.9
F	Height ^[2]	1658	65.3
G	Load height	733	28.9
н	Wheel track, front	1601	63.0
I	Wheel track, rear	1626	64.0
J	Load width, floor	1059	41.7
к	Width	1873 (1863 ^[3])	73.7 (73.3 ^[3])
L	Width incl. folded-out rearview mirrors	2034	80,1
М	Width incl. folded rearview mirrors	1910	75.2

^[1] For curb weight + 1 person. (Varies slightly depending on tire dimension, chassis alternative, etc.).

^[2] Including roof antenna, at curb weight.

^[3] Chassis width.

19.1.3. Weights

The following table lists important weight data for your vehicle.

Important

When loading the vehicle, the maximum gross vehicle weight and permissible axle weights may not be exceeded.

19.2. Engine specifications

19.2.1. Engine specifications

Engine specifications (output, etc.) for each engine variant are shown in the table below. The specifications for Special Edition vehicles may vary.

Recharge vehicles are powered by both a gasoline engine and an electric motor (ERAD – Electric Rear Axle Drive).

(i) Note

Not all engines are available on all markets.

Electric motor

Max. output: 60 kW (82 hp).

Torque: 160 Nm.

19.2.2. Engine oil specifications

Engine oil of type VCC RBS0-2AE0W-20 must be used^[1]. Lower oil grades may not offer the same fuel economy, engine performance or engine protection.

Volvo recommends:

General

(i) Note

See the Service and warranty booklet for information about oil change intervals.

This vehicle is delivered from the factory with synthetic oil.

Do not use oil additives.

Oil viscosity

The wrong oil viscosity can shorten engine service life during normal use. VCC RBS0-2AE0W-20 provides good fuel economy and engine protection. See the viscosity chart.

Viscosity chart

Oil volume

Engine oil volumes (including oil filter) are shown in the table.

^[1] 0W-30 or 5W-30ACEA A5/B5 engine oil can also be used if VCC RBS0 2AE0W-20 oil is not available.

19.3. Specifications for fluids and lubricants

19.3.1. Refilling washer fluid

Washer fluid is used to keep the headlights, windshield and rear window clean. Washer fluid containing antifreeze should be used in very cold weather (below-freezing temperatures).

Fill washer fluid into the reservoir with the blue cover. The reservoir is used for the windshield washer, tailgate window washer and headlight washer*.

(i) Note

When there is approximately 1 liter (1 qt) of washer fluid remaining, the message **Washer fluid Level low, refill** and the symbol will be displayed in the instrument panel.

Recommended grade: Washer fluid recommended by Volvo, with frost protection during cold weather and temperatures below the freezing point.

() Important

Use Volvo's original washer fluid or an equivalent fluid with the recommended pH value between 6 and 8, diluted as recommended, e.g. in a 1:1 solution with pH-neutral water.

(!) Important

Use washer fluid with anti-freeze when temperatures are below the freezing point to help keep the pump, reservoir and hoses from freezing.

Volume:

- Vehicles with headlight washing: 5.5 liters (5.8 qts).
- Vehicles without headlight washing: 3.5 liters (3.7 qts).
- * Option/accessory.

19.3.2. Air conditioning specifications

The climate system in the vehicle uses a freon-free R1234yf refrigerant. For information regarding the refrigerant, refer to the decal located on the underside of the hood.

Refrigerant and compressor oil are used in the air conditioning system. Information about the refrigerant decals, including amounts, is shown below. The table shows the prescribed grade and volume of the compressor oil.

A/C Decal

Decal for R1234yf

Explanation of symbols for R1234yf

Symbol	Explanation
\triangle	Caution
**	Mobile air condition system (MAC)
	Lubricant
الکال	Only a trained and certified technician can perform service on the mobile air conditioning system (MAC)
	Flammable refrigerant

Refrigerant

The refrigerant amount (charge level) is printed on a decal on the underside of the hood.

Vehicles with R1234yf refrigerant

1 Refrigerant amount.

Warning

The air conditioning system contains the refrigerant R1234yf under pressure. In accordance with SAE J2845 (Technician Training for Safe Service and Containment of Refrigerants Used in Mobile A/C System), service and repairs to the refrigerant system may only be performed by trained and certified technicians in order to ensure the safety of the system.

Compressor oil

Volume	Prescribed grade
100 ml (3.38 fl. oz.)	PAG SP-A2

Evaporator

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note. 1005 / 1010

() Important

The A/C system evaporator must never be repaired or replaced with a previously used evaporator. The new evaporator must be certified and labeled in accordance with SAE J2842.

19.3.3. Brake fluid specifications

The medium in the hydraulic brake system is called brake fluid and is used to transfer pressure from e.g. a brake pedal via a master brake cylinder, which in turn actuates the brake calipers.

Recommended grade: Volvo Original or similar fluid that meets a combination of Dot 4, 5.1 and ISO 4925 class 6.

(i) Note

Changing or filling brake fluid should be entrusted to an authorized Volvo workshop.

19.3.4. Transmission fluid specifications

The transmission oil should be changed every 60,000 km.

Automatic transmission

Prescribed transmission fluid:		AW-1
Prescribed transmission fluid: Dual clutch oil, D1		
(i) Note		
Check with your Volvo retailer if you are unsure which variant your vehicle is equipped with.		

19.3.5. Fuel tank volume

The fuel tank's refillable volume is shown in the table below.

	All engines
Liter (approx)	48

The content of this manual represents the status of the user manual at the time of printing and may not be completely valid in future instances. For more information refer to the first page for the complete disclaimer note.

1006 / 1010

	All engines
US gallons (approx)	12.7

19.3.6. Engine oil specifications

Engine oil of type VCC RBS0-2AE0W-20 must be used^[1]. Lower oil grades may not offer the same fuel economy, engine performance or engine protection.

Volvo recommends:

General

See the Service and warranty booklet for information about oil change intervals.

Do not use oil additives.

Oil viscosity

The wrong oil viscosity can shorten engine service life during normal use. VCC RBS0-2AE0W-20 provides good fuel economy and engine protection. See the viscosity chart.

Viscosity chart

Oil volume

^[1] 0W-30 or 5W-30ACEA A5/B5 engine oil can also be used if VCC RBS0 2AE0W-20 oil is not available.

19.4. Specifications for wheels and tires

19.4.1. Approved tire pressure

The following tire pressures are recommended by Volvo for your vehicle. Refer to the tire inflation placard for information specific to the tires installed on your vehicle at the factory.

Tire dimensions	Cold tire pressure for up to five persons	
	Front psi (kPa)	Rear psi (kPa)
235/55 R18 235/50 R19 245/45 R20 245/40 R21	35 (240)	35 (240)
Temporary spare tire T125/70 R19	60 (420)	60 (420)

19.5. Bulb specifications

Specifications for replaceable light bulbs.

If you are experiencing problems with any lights other than light bulbs, contact a workshop^[1]. If there is a problem with an LED^[2] light, the entire lamp unit will normally need to be replaced.

Function	W ^[3]	Туре
Rear turn signals	24	PY24W
Brake lights	21	H21W LL
Rear fog light	21	H21W LL

^[1] An authorized Volvo workshop is recommended.

^[2] LED (Light Emitting Diode)

^[3] Watt
19.6. Type designations

The decals in the vehicle contain information such as chassis number, type designation, color code, etc.

Location of decals

The illustration is generic - details may vary according to market and model.

(a) Vehicle Emission Control Information. US models. Your Volvo is designed to meet all applicable emission standards, as evidenced by the certification label on the underside of the hood. For further information regarding these regulations, please consult your Volvo retailer.

Wehicle Emission Control Information. Canadian models. Your Volvo is designed to meet all applicable emission standards, as evidenced by the certification label on the underside of the hood. For further information regarding these regulations, please consult your Volvo retailer.

2 Vehicle Identification Number (VIN). The VIN plate is located on the top left surface of the dashboard. The Vehicle Identification Number (VIN) should always be quoted in all correspondence concerning your vehicle with the retailer and when ordering parts.

3 Tire inflation pressures. This label indicates the correct inflation pressures for the tires that were on the vehicle when it left the factory.

Gereal Motor Vehicle Safety Standards (FMVSS) specifications (USA) and Ministry of Transport (CMVSS) standards (Canada). Your Volvo is designed to meet all applicable safety standards, as evidenced by the certification label on the driver's side B-pillar (the structural member at the side of the vehicle, at the rear of the driver's door opening). This label also includes codes for paint color, etc. For further information regarding these regulations, please consult your Volvo retailer. U.S. models have the upper decal; Canadian models have the lower one.

5 Engine oil. This label contains the recommended engine oil specifications.

6 Decal A/C. Refrigerant R1234yf.

(i) Note

The decals shown in the Owner's Manual do not claim to be exact reproductions of those found in the vehicle. The purpose is to show approximately how they look and about where they are located on the vehicle. The information that applies for your vehicle in particular is found on the decal on the vehicle.
